ASX Release

ASX Code: AYA

TALISKER COAL DRILLING PROGRAM COMMENCES

The Board of Attila Resources Limited is pleased to announce that a drilling program has commenced at the Company's Talisker North coal project located in the Byro sub-Basin on the eastern flank of the Carnarvon Basin, approximately 650km north of Perth.

The program will comprise 25 aircore holes drilled to maximum depths of 120m for a maximum of 3,000m of drilling (refer to Figure).

The drill holes will be spaced 2km apart along E-W, NW-SE, and N-S trending station tracks that traverse the prospective Bogardie Syncline. Previous exploration in the region in the 1970's and 1980's by companies such as BHP, CRA and Griffin Coal, intersected Permian coal seams up to 2m thick similar in age and quality to coal measures in the southern basins of Western Australia (eg Collie and Irwin River).

Attila's drilling will be targeting coal seams hosted by sediments of the Permian Wooramel Group which have been interpreted to be stratigraphically equivalent to the Collie and Irwin River Coalfields.

The program is expected to last up to 2 weeks and results are expected shortly thereafter.

The Company holds tenure over two granted exploration licences in the Talisker area, E09/1564 and E09/1747, totalling 577km² over 190 Blocks (refer to Figure).
