ASX Announcement

29 August 2011

CathRx Signs Second Non-Binding Term Sheet

CathRx Ltd (ASX: CXD) announced on 19 August 2011 that it had signed a non binding term sheet for the licensing of CathRx products and was in continuing discussions with another prospective licensee.

CathRx announces that it has today signed a detailed term sheet with the second prospective licensee for the development and commercialisation of innovative CathRx catheters in Europe.

The parties will now begin the process of due diligence and negotiations for the purpose of entering into a definitive commercial agreement that reflects the term sheet.

CathRx's CEO, Mr. Jeff Goodman said, "I am pleased with the level of interest being shown in the technology and will be working diligently to secure the best deal possible for CathRx shareholders".

Until due diligence is satisfactorily completed and a definitive agreement is signed, the terms of both term sheets remain non-binding with the exception of confidentiality.

End

About CathRx

CathRx is a medical device company which designs and manufactures reprocessable cardiac catheter solutions for the treatment of people suffering from electrical problems of the heart known as cardiac arrhythmias. CathRx's proprietary diagnostic and therapeutic catheters are designed to give physicians the tools to cost effectively treat patients with speed, safety and precision.

About cardiac arrhythmias

Cardiac arrhythmia describes a group of increasingly common conditions where there is abnormal electrical activity in the heart. The beating of a normal heart is controlled by electrical impulses. When these impulses are uncoordinated the heart fails to function properly. This can result in complications ranging from fatigue to stroke and even death. More than 10 million people worldwide suffer from abnormal heart rhythms. Atrial fibrillation is the most common form of arrhythmia and affects over 5 million people worldwide. Current drug therapies often fail to control the problem and can have side effects. Cardiologists worldwide are increasingly using cardiac catheters to diagnose and successfully treat arrhythmias.
