NEW ELECTRONIC ROLLER DOOR LOCK AND ELECTRONIC GATE LOCK

4C Security Solutions Limited (ASX: FCS), today announced the release of Magna Electronics new electronic Roller Door Lock and the electronic Gate Lock. This new series was designed and developed in our New Zealand R&D centre for the global distribution marketplace.

Magna has added the High Security Roller Door Lock (YR10) and Gate Lock (YG10) to complement its existing range of high security electro-mechanical locks, which include its world class deadlocking drop bolts which have been exported to more than 25 countries.

Both products provide out-of-the-box standalone functionality with the added benefit of seamless integration to the access control system and/or alarm panel. These High Security products, with automatic dead-bolting, anti-tamper and timed re-lock provide a superior solution to Industrial, Military and Residential users.

The range is designed to appeal to asset managers, security consultants and facilities managers as it offers a high quality, high security result at very reasonable price point.

FCS's interim CEO, Geoff Cleaves, said "The high risks of unauthorised access and/or property theft as a result of a breach of a roller door or gate have been long known in the security and insurance industry. Following in the footsteps of its other high security locks, Magna has produced a high quality integrated product that will allow property owners and managers to sleep well at night, knowing that they will not only have extra levels of security, but importantly audit ability".

Geoffrey Cleaves
Interim CEO, Director & Company Secretary
