

10 November 2011

Bullabulling Gold Project – Resource Drilling Update November

Highlights:

- **59 drill holes totalling 11,163m were completed in October and early November 2011.**
- **Phase Two programme has drilled 319 holes (57,657m) out of a planned 70,000m development programme which commenced in May 2011.**
- **Total Phase One and Two development drilling since Q4 2010 now stands at 93,913m in 565 drill holes.**
- **Approximately 99% of drill holes have intersected gold mineralisation with only 7 not mineralised.**
- **Drilling results continue to reconcile well against the latest gold JORC resource model and give confidence for the next JORC upgrade due in Q1 2012.**
- **Principle goal is to increase the 711,000 ounces of existing indicated resource by moving a significant portion of the 1.9m ounces of inferred resource into the higher indicated category out of the current 2.6m JORC ounces.**
- **New higher grade intersections include:**
 - **1m @ 48.80 g/t Au from 182m and 16m @ 1.75 g/t Au from 63m in hole BJ1297,**
 - **9m @ 13.32 g/t Au from 195m and 15m @ 1.39 g/t Au from 161m in hole BJ0371,**

- **1m @ 12.50 g/t Au** from 61m in hole BJ2012,
 - **2m @ 5.01 g/t Au** from 55m in hole BJ2085,
 - **2m @ 3.99 g/t Au** from 76m in hole BJ2338,
 - **9m @ 3.52 g/t Au** from 113m in hole BJ1945,
 - **2m @ 3.48 g/t Au** from 82m in hole BJ2160,
 - **13m @ 3.45 g/t Au** from 92m in hole BJ1257,
 - **20m @ 3.45 g/t Au** from 21m with
 - 12m @ 1.97 g/t Au** from 58m and
 - 12m @ 1.77 g/t Au** from 133m in hole BJ0405,
 - **10m @ 2.61 g/t Au** from 125m and
 - 14m @ 1.94 g/t Au** from 44m in hole BJ0261,
 - **14m @ 2.51 g/t Au** from 130m in hole BJ2083,
 - **10m @ 2.48 g/t Au** from 45m in hole BJ0466,
 - **19m @ 2.48 g/t Au** from 19m in hole BJM024,
 - **14m @ 2.41 g/t Au** from 21m and
 - 26m @ 0.83 g/t Au** from 62m in hole BJ0381,
 - **14m @ 2.40 g/t Au** from 65m in hole BJ2066,
- A new exploration programme has been planned to test regional structures and anomalies identified by recent regolith mapping.
 - Raw data has been received from the recently completed airborne magnetic survey aimed at assessing deeper mineralisation and is currently being reviewed.

Jeff Malaihollo, Managing Director of GGG Resources comments:

“These latest results continue to confirm the resource and geological model with approximately 99% of the drill holes hitting gold mineralisation.

“The drilling also continues intersecting regularly higher grade mineralisation within the broad low grade halo which provide encouragement for targeting high grade ore shoots within the Bullabulling Trend beneath the low grade, open pittable resource.”

Resource drilling programme update

The Phase Two RC resource drilling programme is nearing completion. There are currently three drill rigs working on the Phase Two programme infilling the historic drilling between Phoenix and Hobbit to increase the confidence in the current resource base (Figure 1).

A key aim of the Phase Two resource drilling programme is to infill the current and historic drilling to a drill spacing that allows the Inferred resources in the recently announced resource estimate to be reclassified to an Indicated resource category, and in turn enable initial JORC compliant reserves to be established for the project. The current reported JORC compliant mineral resource is 78,836,000 tonnes at 1.03 g/t Au (2.60 million ounces contained gold) at a 0.5 g/t Au cut off.

The Phase Two drilling programme started on May 14 and since the last announcement where results were reported to September 30, there has been a total of 11,163 metres drilled in 59 holes (Table 1). Total drilling for the Phase Two programme is 57,657m in 319 holes and production since work started on the project by the JV is 93,913m from 565 holes. Drilling during the reporting period focussed on infill drilling of the areas between Hobbit and Bonecrusher (Figure 1).

Assays from the infill drilling continue to confirm the resource estimate and geological model (Table 2).

Better intersections from the Phase Two drilling results received during the reporting period include:

16m @ 1.75 g/t Au from 63m and **1m @ 48.80 g/t Au** from 182m in hole BJ1297,
15m @ 1.39 g/t Au from 161m and **9m @ 13.32 g/t Au** from 195m in hole BJ0371,
1m @ 12.50 g/t Au from 61m in hole BJ2012,
2m @ 5.01 g/t Au from 55m in hole BJ2085,
2m @ 3.99 g/t Au from 76m in hole BJ2338,
9m @ 3.52 g/t Au from 113m in hole BJ1945,
2m @ 3.48 g/t Au from 82m in hole BJ2160,
13m @ 3.45 g/t Au from 92m in hole BJ1257,
20m @ 3.45 g/t Au from 21m, **12m @ 1.97 g/t Au** from 58m and **12m @ 1.77 g/t Au** from 133m in hole BJ0405,
10m @ 2.61 g/t Au from 125m and **14m @ 1.94 g/t Au** from 44m in hole BJ0261,
14m @ 2.51 g/t Au from 130m in hole BJ2083,
10m @ 2.48 g/t Au from 45m in hole BJ0466,
19m @ 2.48 g/t Au from 19m in hole BJM024,
14m @ 2.41 g/t Au from 21m and **26m @ 0.83 g/t Au** from 62m in hole BJ0381,
14m @ 2.40 g/t Au from 65m in hole BJ2066,
18m @ 1.60 g/t Au from 146m and **11m @ 1.19 g/t Au** from 237m in hole BJ2070,
12m @ 1.55 g/t Au from 94m in hole BJ1921,

14m @ 1.45 g/t Au from 35m and 12m @ 1.17 g/t Au from 126m in hole BJ1996,
19m @ 1.31 g/t Au from 123m in hole BJ0384,
12m @ 1.30 g/t Au from 90m in hole BJ0370,
17m @ 1.15 g/t Au from 42m in hole BJ2106 and
25m @ 0.98 g/t Au from 28m in hole BJ0718.

There have been only seven drill holes that have not intersected mineralisation out of the 565 holes drilled since the programme started (**approximately 99% of the holes are hitting mineralisation**).

As in the previously announced holes, there are generally at least 4 intersections per drill hole relating to the multiple stacked lodes defined by the structural mapping. Approximately 60% of the intersections to date are better than estimated by the model, 34% are similar to the model and 6% are worse or missing as predicted by the new model developed by Snowden. High grade mineralisation continues to be intersected within the broad low grade halo with intersections such as **9m @ 13.32 g/t Au from 195m** in hole BJ03711, **9m @ 3.52 g/t Au** from 113m in hole BJ1945, **13m @ 3.45 g/t Au from 92m** in hole BJ1257, **20m @ 3.45 g/t Au from 21m** in hole BJ0405 and **10m @ 2.61 g/t Au** from 125m in hole BJ0261 providing encouragement for targeting high grade ore shoots within the Bullabulling Trend beneath the currently mineralised stratigraphy.

Near Surface Exploration Follow up Drill Planning

The review of the soil geochemistry database completed using historical soil data in combination with photo-mapping of regolith identified six regional scale targets that require follow up exploration drilling. Drill planning for this work has been completed. The exploration drilling will follow on from the current Phase Two infill drilling programme and exploration along the Gibraltar Trend and to the south of the Bullabulling Trend have been incorporated into the exploration work plan. The aim of the exploration drilling is to test for regional extensions to known mineralisation and to better define the geology, especially in the south. The programme will consist of 340m at Kraken, 1,520m at Gryphon, 700m at Edwards, 2,500m on the southern Exploration Licence (Rhea) and 2,000m along strike from Gibraltar (Figure 1). Two separate “Programme of Works” have been lodged with the Department of Mines covering these prospects and these are anticipated to be approved by the New Year, with drilling expected to take between 46 and 60 days and that will extend into late February.

Deeps Exploration Programme

Planning the Deeps exploration programme continued with magnetic and radiometric data acquisition completed over the Bullabulling shear zone. The new data are significantly more detailed than previously available and will lead to a better understanding of the geology and structure of the Bullabulling region (Figure 2). The data will now be analysed to produce a number of filtered geophysical images, unconstrained inversions over the Bullabulling Trend and a geological and structural interpretive map of the study area.

The study of the seismic reflectance properties of the host rocks to assess the potential for using 2D seismic geophysics to map the geology of Bullabulling at depth has been completed and recommendations received. Large variations in both elastic and acoustic impedances, the product of compressional velocity and sample density, were found throughout the Bullabulling Trend stratigraphy. Reflection values in the rock suite encompass a wide range of adequately reflective values (2.9% through to +30%). From the results of the petrophysical analysis undertaken by Curtin University of Technology's Geophysics Department, it appears that adequate reflection can be determined across many of the dominant lithological interfaces in the Bullabulling region such that the major geological structure is likely to image clearly to a depth of 1,500m. Detailed planning of the survey lines will now be finalised and a detailed work plan and timeline for data delivery will be completed.

A combination of the detailed magnetic data will be used in combination with 2D seismic and gravity to develop a detailed 3D model of the structure and geology of the Bullabulling Trend. This model will then be used to target mineralisation at depth.

Bullabulling Overview

The Bullabulling Gold project (Bullabulling) is a large tonnage, low grade deposit with high grade shoots, associated with the regional Bullabulling shear zone which extends over tens of kilometres. The mineralised structure is 500m wide, consisting of multiple west dipping low grade stacked zones with narrower higher grade gold mineralisation. Bullabulling is located near Coolgardie and approximately 65km south-west of Kalgoorlie, Western Australia. Bullabulling has been previously mined producing 371k oz Au in the 1990's. The current programme focuses on the 6km portion of the shear zone known as the Bullabulling Trend where previous operations were concentrated. The focus for the Bullabulling joint venture between Auzex Resources Ltd and GGG Resources plc is to establish an initial reserve exceeding one million ounces gold to commence production in 2015.

Competent Person Statement

The information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves is based on information compiled by Jeff Malaihollo PhD who is a full-time employee of the Company and Member of The Australasian Institute of Mining and Metallurgy and the Geological Society of London. He is qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves".

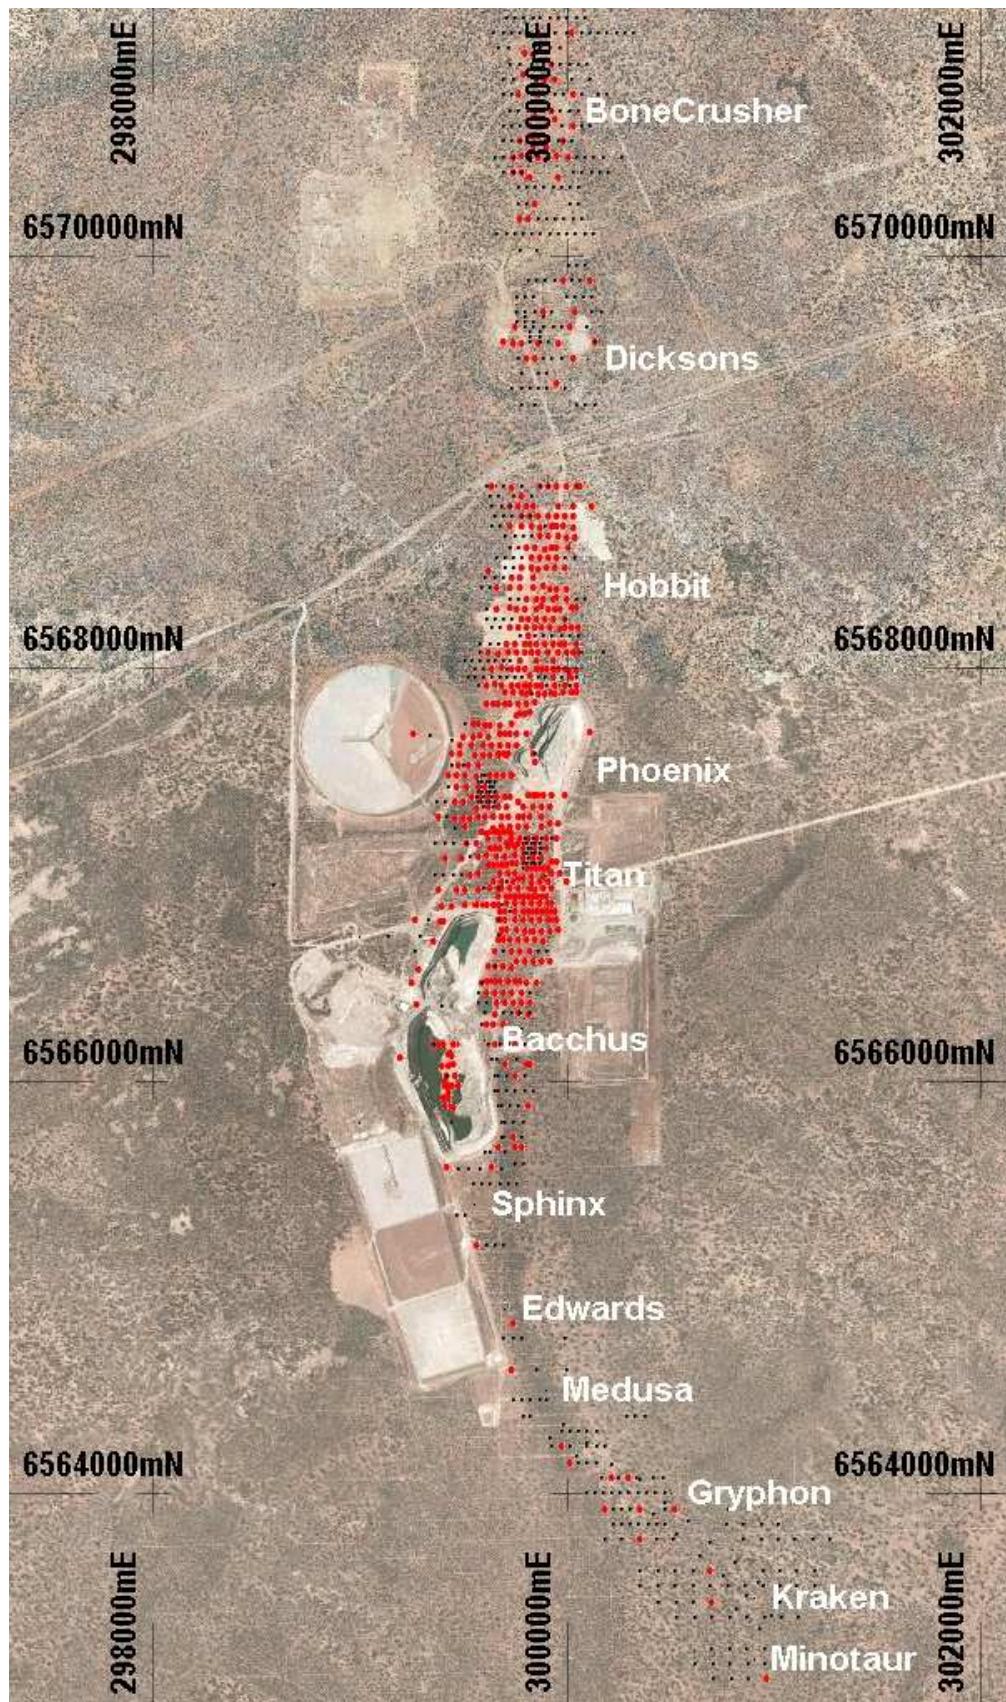

Figure 1. Location of completed RC drill holes (red dots) by the Joint Venture in relation to planned drill holes (black dots).

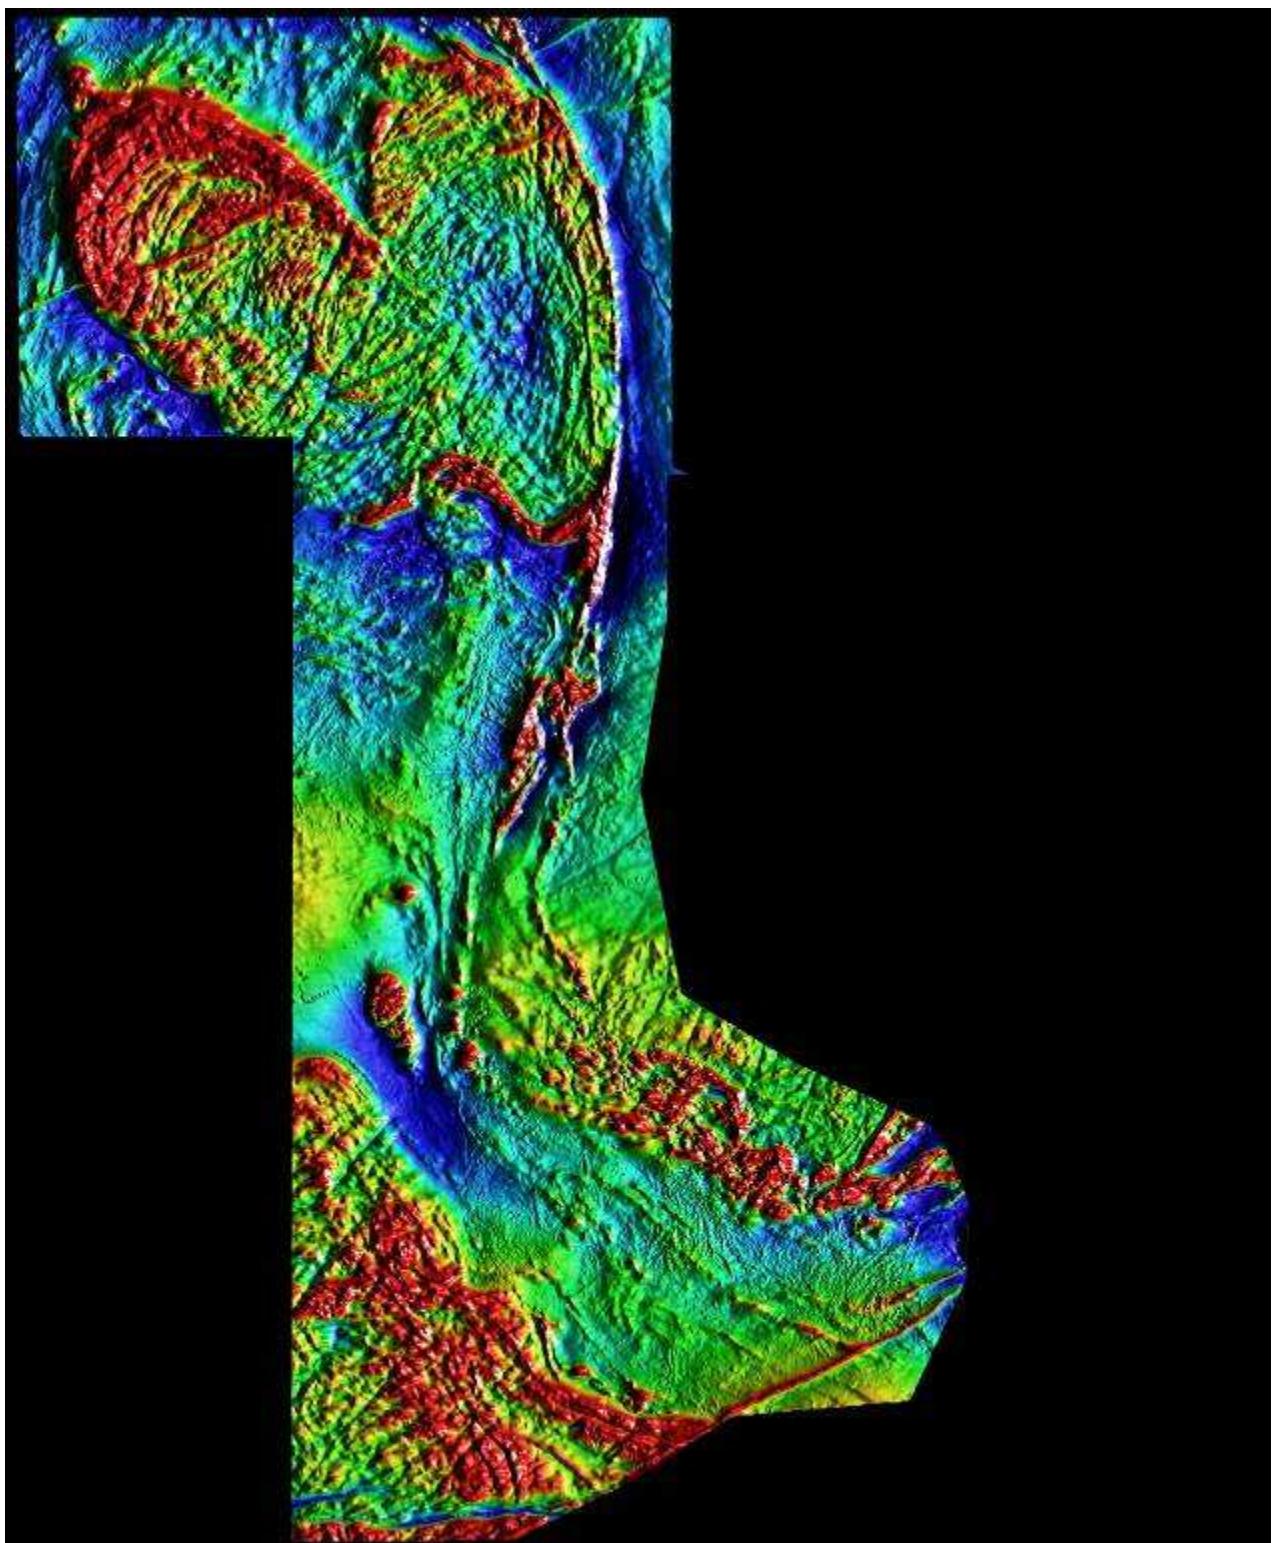

Figure 2. TMI image with sunshade from new magnetic survey. Note the detail of the survey is such that individual power poles can be seen on the image.
