COMPANY HIGHLIGHTS

- New +Million Oz gold discovery
- Emerging new gold district
- Aggressive exploration
- Big hitting shareholders
- Proven Management team

Banfora Gold Project, West Africa
21Mt @ 2.2g/t for 1,500,000oz gold less than 100 metres depth & open
Over 100km of highly prospective regional shear zones, 20 high priority targets for testing

Mauritanian Projects West Africa
Tijirit Gold Projects (1,400km²)
Adjacent to Kinross's Tasiast Gold mine

Strategic Holdings

Renaissance Minerals (ASX:RNS)
(16%) Australian gold explorer

Tawana Resources NL (ASX: TAW)
(14%) African focused explorer

Further drill results at Samavogo

Banfora Gold Project, Burkina Faso include:

- 10m @ 6.21g/t gold from 93m
- 6m @ 9.41g/t gold from 102m
- 5m @ 11.23g/t gold from 131m
- 7m @ 4.92 g/t gold from 131m

Highlights

- RC & DD drilling at the new and exciting Samavogo “satellite” discovery has intersected further significant gold mineralisation
- Results are from step out, infill and down dip drilling targeting multiple mineralised zones over 3km of strike
- Mineralisation remains open along strike and down dip with a further 12km strike of the Samavogo structural target still to be tested
- Mineralisation is shallow and so far has been drilled to approximately 100 metres vertical depth
- A maiden resource estimate due shortly at the Samavogo discovery
- An aggressive exploration programme is currently underway with RC/DD drilling at Samavogo and Nogbele deposits, RAB and auger rigs testing new regional targets across the 120km of highly prospective shear zones at the Banfora Gold Project
- Mauritania projects update: Exploration program has commenced including aeromagnetic surveying, soil geochemical sampling, geological mapping and diamond drilling

Gryphon Minerals Ltd (**ASX:GRY**) is pleased to announce further drilling results from first pass RC drilling at the Samavogo Prospect, located approximately 20km to the north-east of the **Nogbele Gold Deposit**, at the Company's flagship Banfora Gold Project in Burkina Faso, West Africa. The Project is located in a major gold producing district, host to such world class gold deposits as Randgold's **Tongon** (4.2Moz) Resolute's **Syama** (5 Million oz Au mined & 6.5 Million oz Au in resources) and Anglo/Randgold's **Morila** (6.5Moz).

The Samavogo target is exciting as it is a new discovery outside of the current known resources of 21Mt @ 2.2g/t for 1,500,000 gold at the Banfora Gold Project. Over the coming months the Company will continue to unlock the value of the Banfora Project by drilling the plethora of satellite targets across its 1,200km² Project.

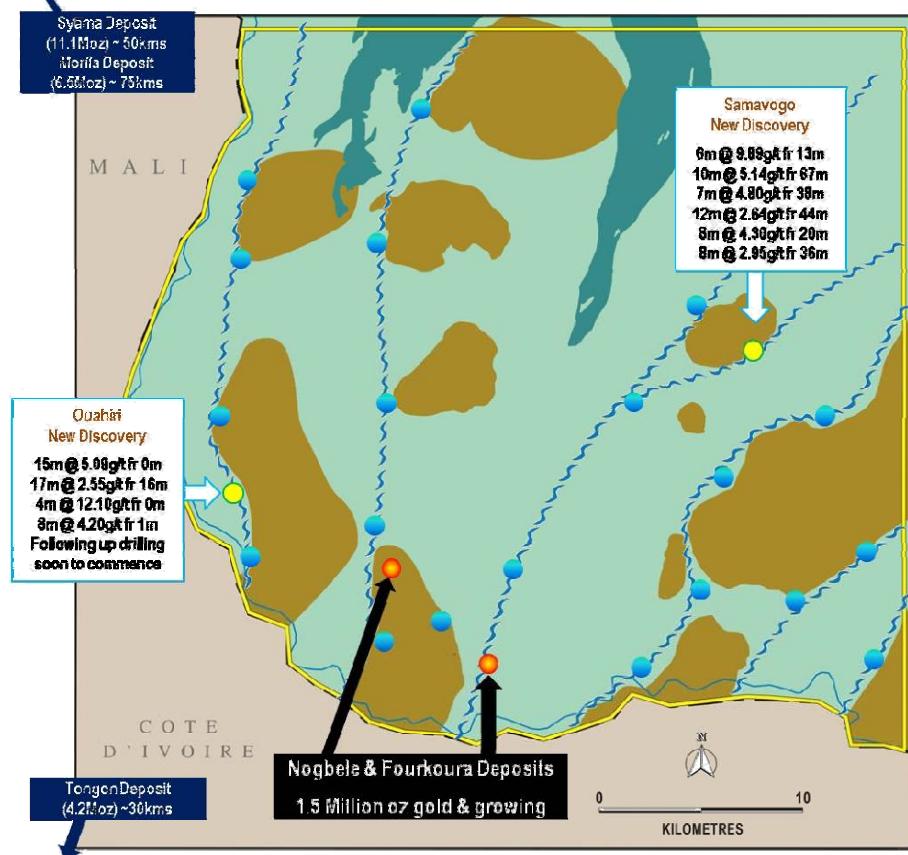

The Company believes that the drill results released to date confirm the potential for the Banfora Gold Project to host world class gold mineralization similar to other major deposits in West Africa.

**GRYPHON
MINERALS LIMITED**

Banfora Regional Targeting

- Over 120km of highly prospective regional shear zones
- So far less than 5% have been drill tested
- Currently only 2 prospects (Nogbele & Fourkoura) have resource estimates
- 2 new prospects (Samavogo & Ouahiri) to be drilled for maiden resource estimates in 2011
- A further 20 high priority walk up regional targets for testing in 2011

- Nogbele & Fourkoura growth
- Aiming for next resource growth
- High Priority walk-up drill targets

See Appendix One for Full results

Samavogo Discovery

Drill results are from Reverse Circulation drilling targeting shallow gold mineralisation from multiple zones on the new and exciting, Samavogo target, located approximately 20km to the north-east of the Nogbele Gold Deposit. All results are shallow and typically intersecting gold **less than 100 metres vertical depth due to the shallow angle of mineralisation** (approximately 20 degrees). **Mineralisation starts from surface and is open along strike and down dip**, demanding immediate further drilling.

Drilling is being undertaken on an 80 metre x 40 metre grid across the current 3,000 metre strike length which will enable a maiden resource estimate at Samavogo to be calculated in the near term. Broad step out drilling will be undertaken across the remainder of the 12 km in the coming months.

Mineralisation is associated with pyrite, sericite, hematite, carbonate and silica alteration in a shear zone hosted within garnet schist and sheared volcanic.

The drilling has targeted only the first 3,000 metres of a major shear zone that continues **untested for a further 12km** along the southern margin of an intrusive body. Drilling is targeting extensional zones along the margins of the intrusive in a similar geological setting to Randgold's 4.2Million oz Tongon Gold Deposit located approximately 30km to the south of Banfora Project.

Samavogo is the first of several satellite targets to be RC drill tested over the coming months at the Banfora Gold Project. **A further 20 high priority regional targets will be tested with reconnaissance style RAB and auger drilling over the coming months.** All results will be made available at the earliest convenience.

Background: Banfora Gold Project - Burkina Faso, West Africa

The Banfora Gold Project is located in the south-west of Burkina Faso, West Africa in a major gold producing district, host to such world class gold deposits as **Tongon** (4.2Moz) **Syama** (5 Million oz Au mined & 6.5 Million oz Au in resources) and **Morila** (6.5Moz).

The project is **owned 100% by Gryphon Minerals** and contains continuous exploration licenses covering approximately 1200km² of a major gold district. The project is easily accessible by road and in close proximity to the town of Banfora and the major city of Bobo Diolasso. Grid power is located approximately 30km from the eastern boundary of the project.

The Company recently announced an inferred resource at the Banfora Project of **21Mt @ 2.2g/t for 1,500,000oz** of gold of which the **majority is shallow and above 100 metres depth**. The Company views this resource as an interim estimation with significant potential to define further shallow ounces from the on-going drilling programmes (Refer to ASX release 01/09/10 for details).

Regionally within the **1,200km² project area** there remain numerous untested high priority targets which the Company will be RC and Diamond drill testing these during 2011.

Detailed information on all aspects of Gryphon Minerals projects can be found on the Company's comprehensive website www.gryphonminerals.com.au

Yours faithfully

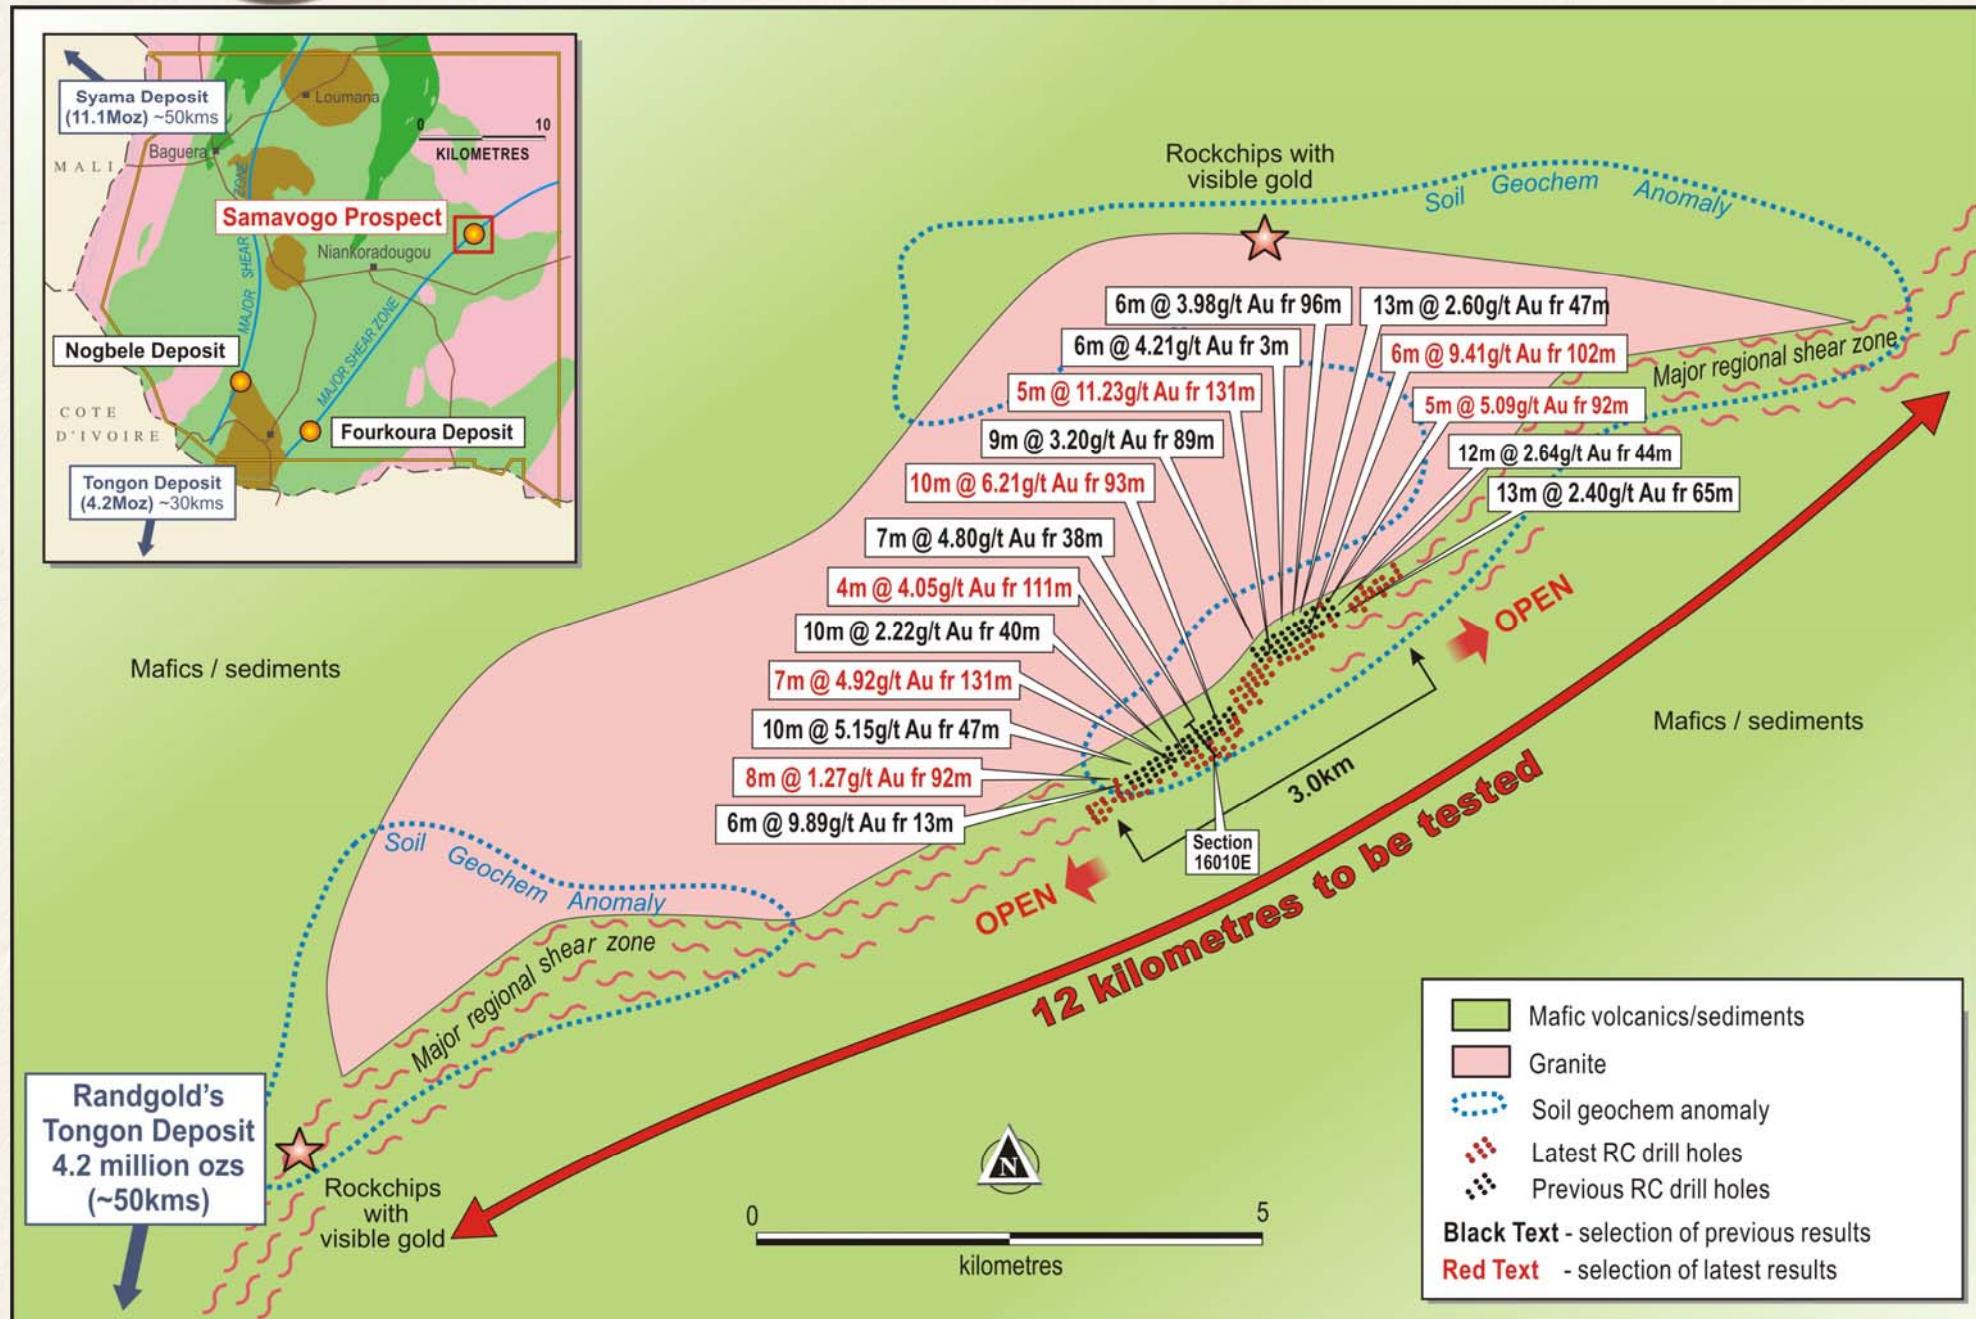

Steve Parsons

Managing Director

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr Stephen Parsons, who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Stephen Parsons is a full-time employee of the company. Mr Stephen Parsons has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Stephen Parsons consent to their inclusion in the report of the matters based on his information in the form and context in which it appears. Information in this report from date collection to wireframe interpretation, at Nogbele and Fourkoura Prospects and geostatistical modelling calculations is based on work by Mr Sam Brooks which was reviewed by Mr Michael Fox. Mr Brooks is a full time employee of Gryphon Minerals, and a member of the AIG. Mr Fox is a full time employee of Gryphon Minerals and a member of the AIG with sufficient experience relevant to the style of mineralisation and type of deposit to qualify as competent person defined by the 2004 Edition of the "Australian Code for Reporting of Mineral Resources and Ore Reserves". Mr Fox consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

Notes:

1. All results from Reverse Circulation (RC) and Diamond (DD)
2. Samples are 4 and 1 metres.
3. Drill holes not drilled in numerical sequence thus holes numbers appear "missing" or out of order
4. Assaying conducted by BIGS Laboratories, Ouagadougou, Burkina Faso using industry standard 50g lead collection fire assay with AAS finish.
5. Reference standards, field duplicates and blank samples are routinely inserted; quality control samples are routinely monitored.
6. * Hole ends in mineralisation
7. NSR - No Significant Results (<1g/t)
