

QUARTERLY ACTIVITIES STATEMENT

For the quarter ending 30 June 2012

HIGHLIGHTS

- **Glandore Project**
 - PoW approved for drilling
 - Heritage Survey booked for July
 - Hurdle with Traditional Owners on access to Lake Yindarlgooda

- **Jundee South Project**
 - PoW approved for second phase

- **Twin Hills Project**
 - 1300m of drilling completed in May 2012 after rain interruption
 - PoW approved and RC drilling planned September 2012

- **Gindalbie Project**
 - HyVista Survey preliminary interpretation reveals anomalies
 - PoW approved and Heritage Survey completed

- **Regional Exploration**
 - Leases surrendered/dropped over areas of Low prospectivity

EXPLORATION ACTIVITIES

Aruma Resources Limited (ASX:AAJ) (“Aruma” or “the Company”) is pleased to provide an update to the market on its strategy, progress and planned programs for the Company’s portfolio of gold projects, covering some 665 km² in WA’s Eastern Goldfields.

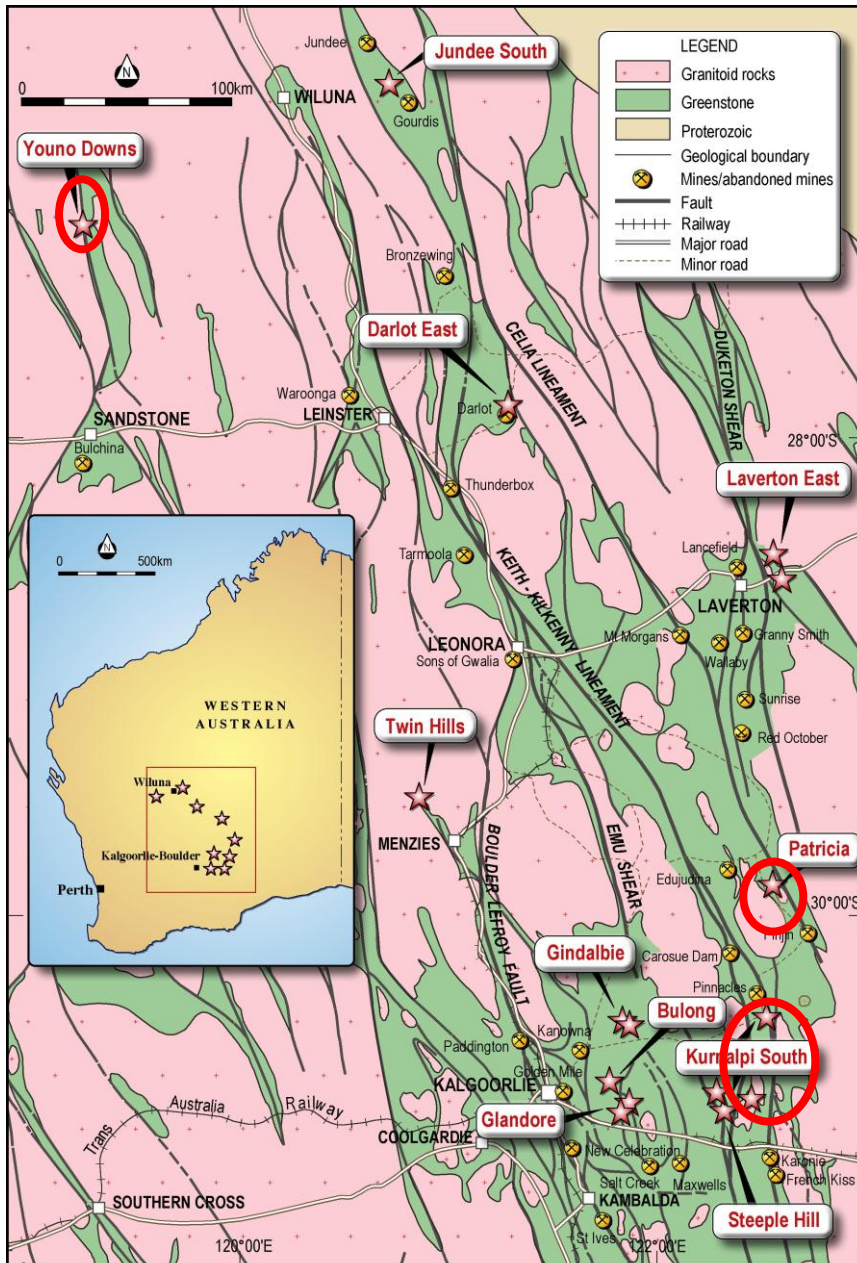

Figure 1 Aruma Projects in the Eastern Goldfields with relinquished areas in red ellipses

Project Locations

EASTERN GOLDFIELDS	Glandore Hub	Glandore Project - 40km east of Kalgoorlie-Boulder Status - Ready to drill on Western Leases Eastern Leases Exploration in discussion with Traditional Owners
		Gindalbie Project - 60km north-east of Kalgoorlie-Boulder Status – Flown with HyVista and PoW ready for submission
		Bulong Project - 30 km east of Kalgoorlie-Boulder Status – Awaiting grant and data base assembled
	Regional Projects	Twin Hills Project - The Twin Hills belt 25 km north of Menzies Status – RC Drilling ready
		Jundee South Project - 20km south of Jundee Mine Status - First Pass RAB drilling hits 18 g/t Au over 1m
		Darlot East Project - 20km east of Laverton Status – Granted and drilling targets identified
		Laverton East Project - 20km east of Laverton Status - Paul Well (Northern) Lease has multiple HyVista Targets

Leases Advanced or Dropped

Aruma continues to manage and rationalise its landholding in the Eastern Goldfields and Murchison regions. In line with this strategy, Aruma has further relinquished several Exploration Licences that have not given definite responses to exploration. These leases totalled approximately 600km² and were relinquished within the financial year but were officially notified in early July 2012.

QUARTERLY ACTIVITIES STATEMENT
FOR THE QUARTER ENDING 30 JUNE 2012

Aruma has a clear strategy to efficiently explore the gold mineralisation potential of its landholding in Western Australia's Goldfields - with a view to developing a gold production hub centred on its flagship Glandore project; as well as satellite projects. Importantly, all of Aruma's lease holdings have been selected based on the presence of geological structures typically known to host mineralisation.

The Mythological Claim over 1100km² in the area over and around Lake Yindarlgooda and the recent NNTT decision to uphold objections to the expedited procedure for approvals (announced on 19 June 2012) has caused the company significant delays on the granting of leases. This is despite the area being removed from the DIA site register in February 2012, and the indications by other claimants over the areas that no such significance exists within the proposed site.

The Claimants have also approved a new lease within the proposed site and carried out site clearing and bulldozing previously, but the GLSC maintains that the leases will only be approved if the company promises to carry out "no ground disturbing activities". Such a condition clearly precludes exploration let alone mining.

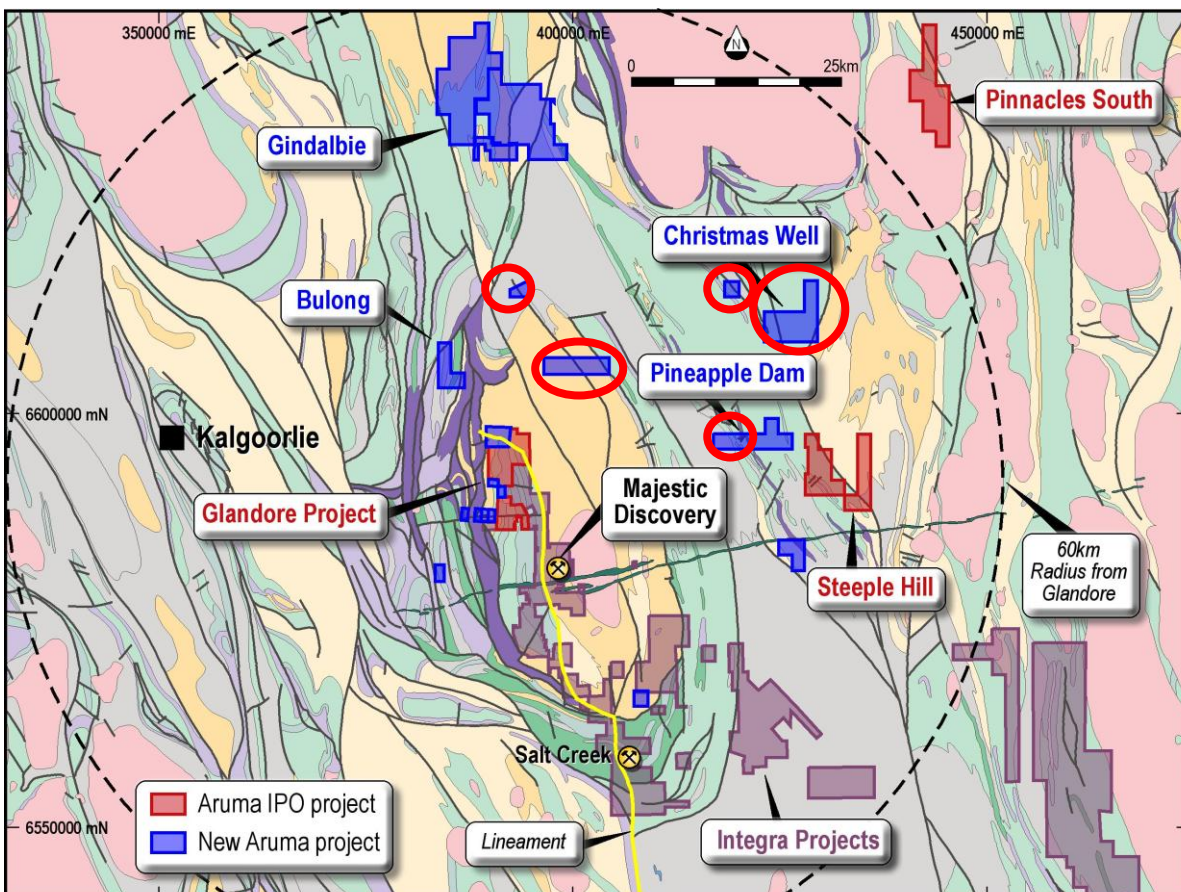

Figure 2 The Glandore Hub Leases with relinquished areas circled

FOLLOW UP EXPLORATION OF FLAGSHIP GLANDORE PROJECT

The Company is committed to a strategy of efficient exploration to confirm or disprove potential targets. The Fluid Flow Study, which was finalised in March 2012, has defined high ranked targets in previously underexplored areas of Glandore.

Glandore Fluid Flow Modelling

The diagram below shows the areas of high Fluid Flow (warm colours) from the final CSIRO Report received in March 2012 and approved by the Department of Mines and Petroleum (DMP) for drilling soon thereafter. This has been held up with GLSC negotiations which are part of the Lake Yindarlgooda Mythological Claim. The areas circled are of interest as defined by the CSIRO modelling and will be RAB drilled for bedrock alteration after Heritage Clearance.

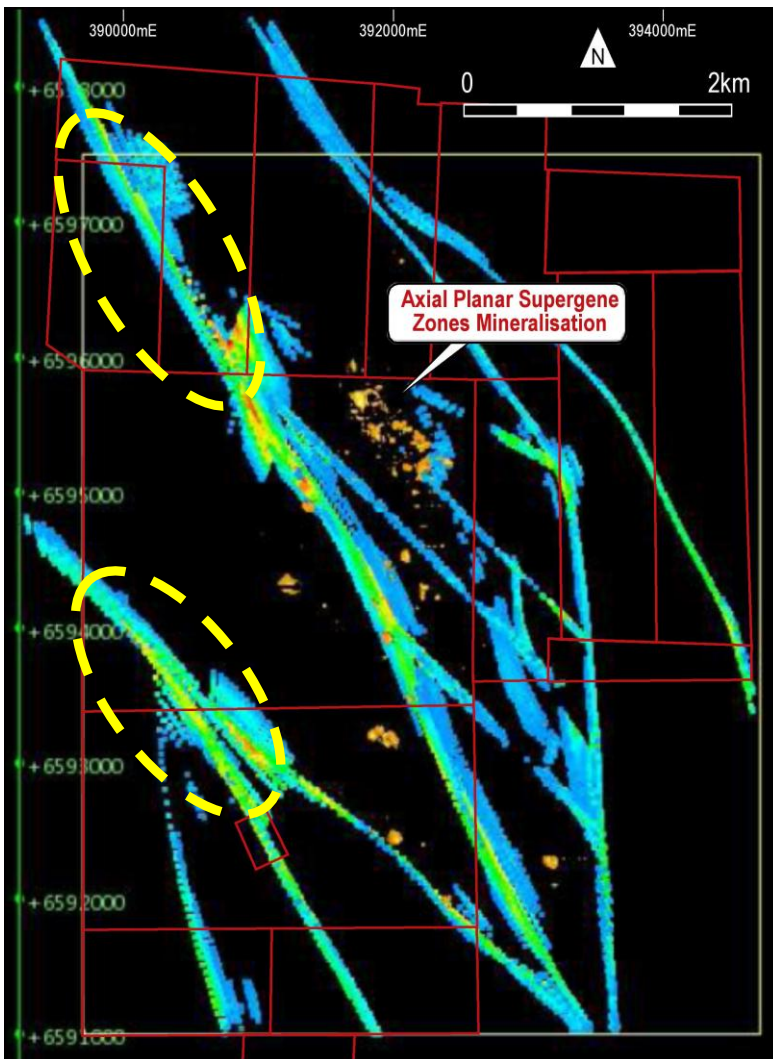

Figure 3 Preliminary targets (Yellow Ellipses) at Glandore from CSIRO Fluid Flow Study

Aruma Resources Limited

**QUARTERLY ACTIVITIES STATEMENT
FOR THE QUARTER ENDING 30 JUNE 2012**

The major anomalies generated are on the mainland adjacent to the lake areas and to date, have not been drilled. This opens a new phase of exploration at Glandore with targets generated by new techniques. These targets are planned to be drilled after Heritage clearance in August 2012.

It should be noted that the new areas are outside the known mineralisation areas such as Supergene-Axial Planar (yellow solids on the Figure 3 above) and the final Report fully defines all the anomalous areas.

TWIN HILLS NORTH PROJECT DRILLING

A total of 2164m in 141 holes was completed by RAB drilling in the northern lease EL29/743 at Twin Hills. The area drilled was the geochemical anomaly to the south of the RC holes undertaken by the previous explorers.

The drilling was interrupted by a major rain event and the assays were not received in the quarter. The further drilling to the south in EL29/823 will be undertaken after the scheduled and approved RC drilling over the previous RC intersection below.

Table 1 Table of historical intersections

Hole ID	MGA mN	MGA mE	From	To	Interval (m)	g/t Au	ppm Cu
THR 301	6755258	314685	25	47	22	1.04	NA
THR 288	6755208	314757	25	26	1	2.56	NA
THR 331	6755408	314792	50	70	20	0.54	NA
WRC01	6755252	314668	43	55	12	0.84	308
Including	6755252	314668	53	54	1	1.79	2360
WRC03	6755313	314670	32	60	28	0.86	182
WRC04	6755307	314648	24	48	24	0.51	113
WRC06	6755365	314655	24	48	24	0.39	99

The above table shows the thick low grade intersections previously encountered in the northern leases to be followed up in the near future. The Au-Cu signature in WRC01 is similar to the intrusive hosted orebodies identified recently at Integra Mining Limited's Majestic Discovery.

The drilling is planned to determine if the intersections are a flat thick continuous zone or two steep thinner zones. This drilling is scheduled for September 2012.

GINDALBIE PROJECT OVERVIEW

At Gindalbie, Aruma had 75km² of ground in leases as shown below in blue. The yellow area is the 75 km² Camel Dam area picked up in the LSA agreement for Twin Hills and surrounds the Mayday mines.

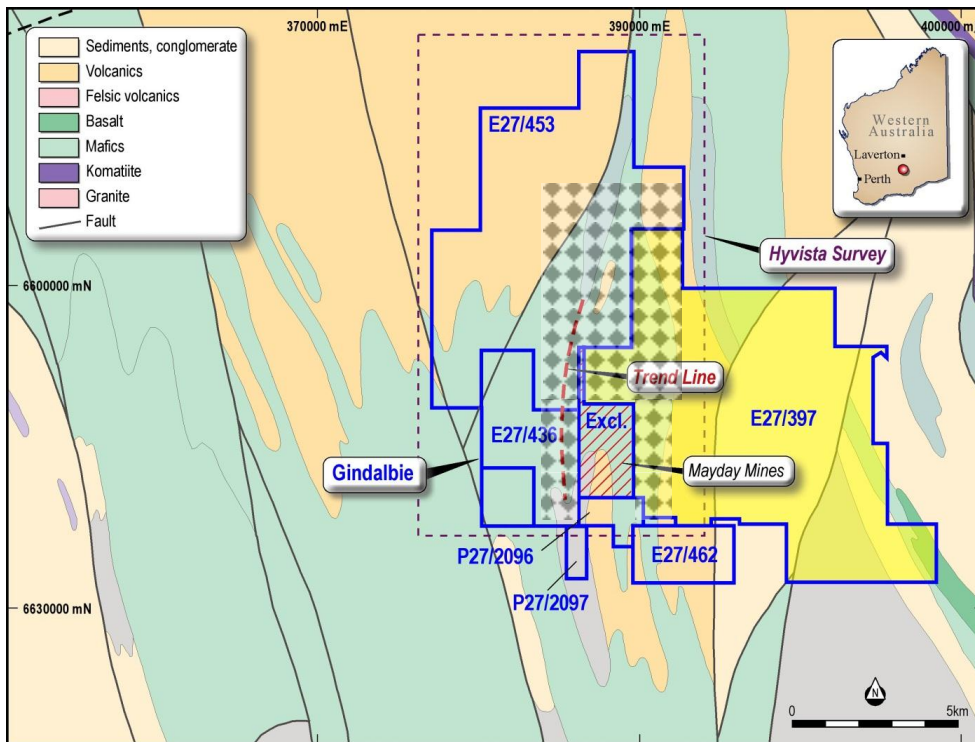

Figure 5 Map of proposed drilling (shaded) at Gindalbie with E27/397 shaded yellow (excluded Mayday leases red striped)

Work has been completed on the total package with full data base examination and HyVista interpretation completed. Some 50 RAB holes on geochemical anomalies are planned to be done and the heritage and site access is completed. This work is scheduled for August-September 2012.

LAVERTON EAST

The new Lease at Paul Well, to the north of the original Laverton East Leases, has been flown for HyVista and this has yielded similar anomalies to the southern area. The Figure 6 below shows the geology, with the target areas as yellow ellipses.

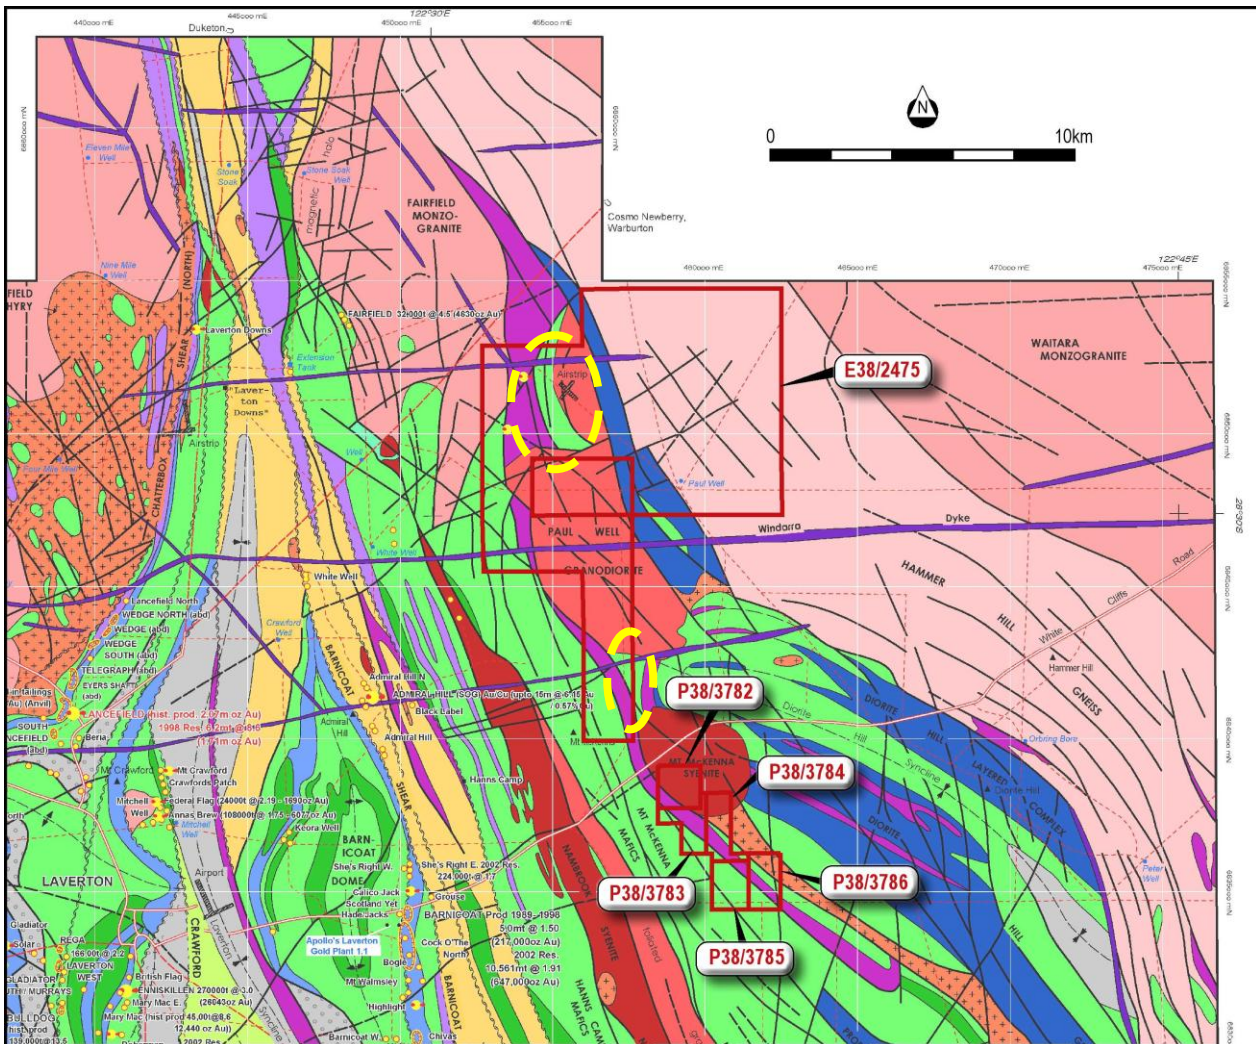

Figure 6 Laverton East Leases showing Geology and the target areas (in Yellow) on the Paul Well Lease (E38/2475) to the North. (After F Fitton)

The target areas for the drill holes are sited on similar HyVista responses that yielded the previously reported 2m at 4.28g/t Au in LEAC 31.

Eastern Goldfields Projects Progressing

Aruma has refocused on prioritised projects and reduced the landholding to 665 km² to conserve funds.

Proposed Exploration Activities for Q1 2012/2013

GLANDORE

- Initial drilling scheduled on Fluid flow Model under covered western areas
- 61 RAB holes pegged

TWIN HILLS PROJECT

- PoW approved for both leases
- 4 RC holes scheduled

GINDALBIE PROJECT

- Total package of 150 km² of covered prospective ground
- Heritage and site access completed
- 50 RAB holes scheduled

KURNALPI SOUTH AND SATELLITE PROJECTS

- Applications and Lease areas under the mythological claim relinquished or dropped

LAVERTON EAST

- Geochem over new Paul Well HyVista anomalies

REGIONAL ELs

- HyVista Survey to be Interpreted
- Drop and relinquish less prospective areas
- 20 holes at Darlot east planned

Other Projects

In addition to its current projects in Western Australia, Aruma continues to evaluate potential project opportunities both locally and overseas.

R&D Tax Return Successful

Aruma has received a tax return of \$299,475 after costs in the Quarter and this is a welcome boost for the exploration effort.
