ARUMA

Aruma Resources Limited

ABN 77 141 335 364 ASX: AAJ

ASX ANNOUNCEMENT 21 February 2012

EXPLORATION UPDATE

Highlights

- Second EL granted at Twin Hills
- PoW approved and clearing completed at Twin Hills
- Hyvista interpretation completed at Pineapple Dam and Gindalbie

Growing Western Australian gold explorer, Aruma Resources Limited (ASX: AAJ) has reached further milestones for its aggressive 2012 exploration program.

EXPLORATION UPDATE

DISCUSSION OF MILESTONES

Twin Hills Project

The PoW application for drilling at Twin Hills was approved for the initial drilling over the anomalous auger holes and will comprise some 200 RAB holes over the northern EL29/743.

The access and drill holes have been cleared ready for RAB drilling next month. Also accessed are the RC holes over the previous thick intersection at the northern end of the lease.

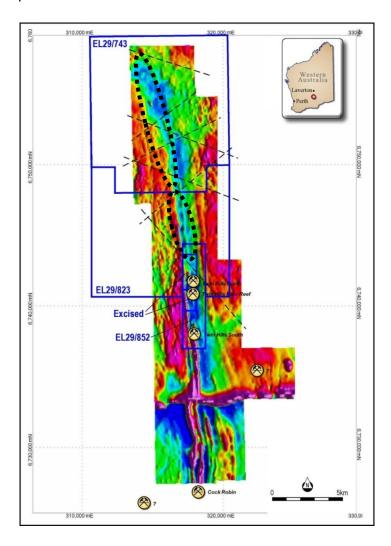

Figure 2 Aruma Resources' Twin Hills Project with anomalous trends

The southern EL29/823 was also granted and the PoW has been prepared for the anomalous gold auger areas. These are an extension of the northern anomalies and total some 15km in length. The anomalies are the black ellipses on Figure 2 above.

EXPLORATION UPDATE

Steeple Hill Prospect

After the anomalous Cu and Ni results of the drilling, the holes were inspected and the "Blebby Sulphides" were confirmed in the chips in HPRB 23. The Hyvista spectral survey from 2010 was reviewed and the anomalous response around this hole was noticed in two other locations along strike. Figure 3 shows the locations of the drilling program and the strike of the ultramafic with the further HyVista and magnetic anomalies to be further investigated.

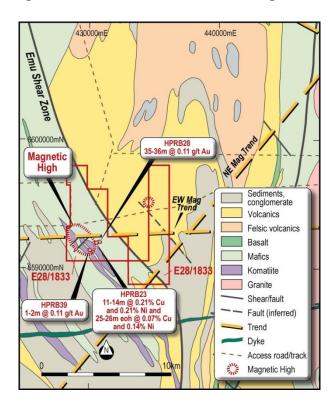

Figure 3 Steeple Hill Results on geology

The latest HyVista and data survey has also identified a nickel gossan at Pineapple Dam situated to the west of Steeple Hill.

Gindalbie Prospect

The Gindalbie Lease (which was included in the Twin Hills agreement) has been flown with Hyvista and interpreted by Aruma and HyVista staff. The results of the HyVista preliminary examinations show that there are significant areas of mineral indicators in several locations and these are coincident with the Lady Lauren 25 g/t Au surface sample marked in Figure 4.

The PoW has been submitted and is expected to take a month to be approved.
