Half Year 2012 Highlights

Solid base for strong full year result.

- Underlying Profit up 3% to \$232.9 million
- High quality result considering soft demand and lower wind farm development and gas storage fee income
- > Retail Operating EBIT up \$19.8 million (12.5%)
- > Merchant Operating EBIT up \$24.8 million (11.1%)
- > 100,000 net increase in customer numbers
 - » 89,000 net increase in NSW electricity customers
- Strong operational performance with step improvements in customer sales and service
- > Operating cash flow temporarily impacted by new C&I system
- Conditional agreements signed to acquire remaining 67.5% of Loy Yang A*
- Intention to raise \$650 million high equity credit hybrid*

^{» 2012} Interim Results 6 months to 31 December 2011

^{» 24} February 2012

Retail - EBIT Drivers

Strong growth in first half financial performance.

Key drivers:

- Gross margin favourable mainly due to the impact of higher tariffs in FY12
- > Other gross margin higher than prior year mainly due to increased bad debt recoveries, reconnection / disconnection fees and special meter read fees
- > Campaigns and advertising costs up in line with increased sales activity
- > Labour and Contractor Services higher than prior year due to increased customer numbers in the half year. The majority of increased contractor costs from new connections were recovered in fees and charges and offset in Other gross margin
- > Amortisation higher than last year due to amortisation of New South Wales customer acquisition costs
- » 2012 Interim Results 6 months to 31 December 2011

Merchant – EBIT Drivers

Good growth in first half.

Key Drivers:

- > Wholesale Electricity favourable due to higher hydro generation and lower hedging costs, partly offset by lower volumes
- > Wholesale Gas unfavourable due to lower volumes in both Consumer and C&I segments
- > Eco-markets ahead of last year largely due to effective portfolio management resulting in lower costs
- > Power Development lower development fees recognised due to timing

Customer growth - 100,000 customers in six months

NSW leads growth in AGL customer base.

- > 100,419 net customer growth across all states
 - » 80,166 new dual fuel customers
- AGL increases gap in national churn from 3.8ppts to 4.7ppts below industry average (16.1% vs. 20.8%)
- > Strong net growth in NSW electricity customers
 - » Up 89,002 (117% versus 1HFY11)
 - » Reflecting effective conversion of lead sales
- > Increased sales volumes driven by:
 - » New channels
 - » Expansion of existing capacity
 - » Integrated marketing campaigns
- Other states performing well despite high levels of competition

» AGL External

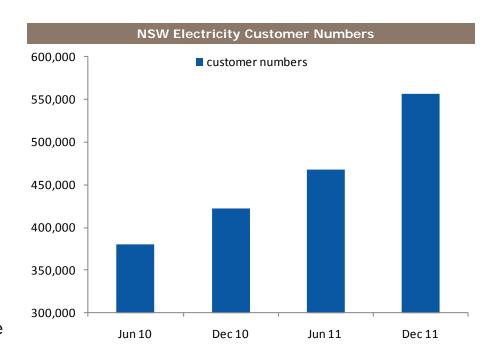

²⁰¹² Interim Results 6 months to 31 December 2011

^{» 24} February 2012

NSW growth – Electricity customer acquisition

Organic growth strategy ahead of required "run rate".

- Current success rates confirm AGL on track to grow NSW electricity customer base to between 800,000 and 900,000 by June 2014
- Future growth at 65% of current success rate would deliver target
- Average usage of NSW residential customers at least in line with market at ~ 6.9 MWh p.a.
- Strong growth in SME customers (up 12,744) adds to quality of NSW customers acquired
- AGL NSW electricity churn below market average (16.4% v 17.4%)
- Strong AGL brand supports high retention of gas customers and growth in electricity customers

NSW Electricity Churn Rate	FY10	FY11	1HFY12*
AGL	19.5%	17.0%	16.4%
Market	12.8%	14.1%	17.4%

^{*} half year churn, annualised

^{» 2012} Interim Results 6 months to 31 December 2011

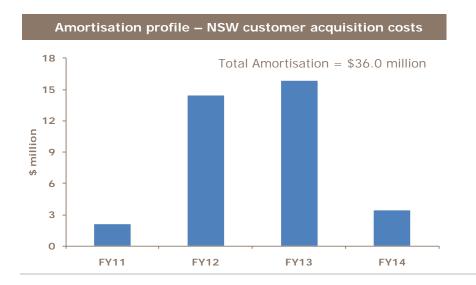

^{» 24} February 2012

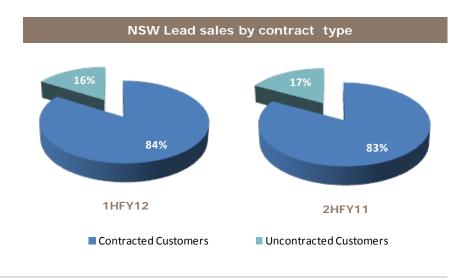

[»] AGL External

NSW growth – Electricity customer acquisition

Low cost to acquire creates significant shareholder value.

- > Average acquisition cost per customer \$172
 - » Amount amortised over life of contracts \$164
- > High proportion of new customers entering into fixed-term contracts (84%)
- Capitalised cash outlay in 1HFY12 was \$20.4 million

- » 2012 Interim Results 6 months to 31 December 2011
- » 24 February 2012
- » AGL External

Retail Operations & Customer Service

Continued focus on core operations.

- AGL share of customer complaints continues to decrease, well below natural market share
- Improved performance in the customer service centres
 - » Reduced average call wait times, higher instances of first call resolution and grade of service improving
- Consumer receivables reducing driven by continued focus on collection processes
 - » Consumer debt >30 days has reduced 10% since December 2009, despite annualised billings increasing 20% over the same period
- > Unbilled customers remain at low levels
- Retail opex to gross margin ratio falling

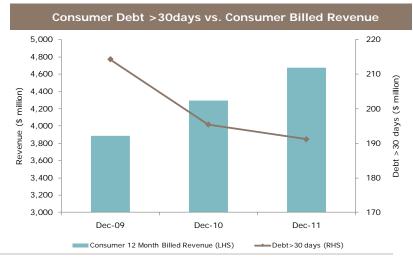

^{» 24} February 2012

» AGL External

Share of total Ombudsman complaints continues to decrease

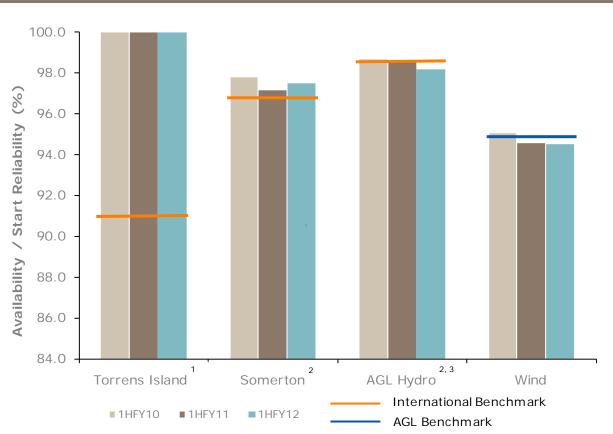

Merchant - Generation: Operational performance

Plant performance continues at high levels.

- Commercial availability is used to measure Torrens Island performance, and represents the percentage of times the plant is available to operate when required.
- Start reliability is used to measure the performance of Somerton and AGL Hydro. Start Reliability is the percentage of times the plant started successfully when asked to start.
- NERC North American Electric Reliability Corporation's 5 Year average for Hydro facilities adjusted for the difference in operating regime between the North American fleet and AGL's fleet which operate as peaking plant which increases the frequency of starts and stops.
- 4. Availability weighted by plant MW capacity is used to measure wind farm performance. There is no international benchmark for wind farms, however AGL targets 95%.

Carbon tax legislation

Introduction of carbon tax expected to be earnings accretive for AGL.

- > AGL has invested heavily in preparation for a low carbon environment
 - » Generation fleet average emissions intensity 56% below NEM (excluding Loy Yang A)
 - » Expanded pipeline of low-emission gas and renewable power development projects
 - » Skilled resource base to assist customers Energy Services
- > Preparation underway to manage obligations and implementation

Generation – Carbon Intensity

	Capacity (MW)	Output 2010/11 (GWh)	Carbon intensity (tonnes CO2e/MWh)
AGL Total	3,246	4,938	0.4
Industry Average			0.9

Summary

First half of FY12 has laid a solid foundation for a strong full year.

- Retail continues to perform well
 - » Good growth in margins
 - » Strong growth in customer numbers
 - » Step improvement in customer service
- Merchant Energy performs very well despite lower wind farm development fees
- > Upstream Gas continues to expand reserves
- Balance sheet remains strong
- Conditional agreements signed to acquire remaining 67.5% of Loy Yang A*

* See separate ASX release dated 24 February 2012

Intention to raise \$650 million high equity credit hybrid*

^{» 2012} Interim Results 6 months to 31 December 2011

^{» 24} February 2012

[»] AGL External

Outlook 2012

Further improvements expected in the second half of FY12.

- Previous guidance of Underlying NPAT for FY12 of \$470m to \$500m confirmed subject to normal trading conditions
- > First half delivers foundation for strong full year result
- Continued growth in Retail contribution
- > Growth in NSW electricity customers to continue
- > Wholesale Electricity performance expected to materially improve on prior year
- Merchant Energy overall growth expected to be strong

- » 2012 Interim Results 6 months to 31 December 2011
- » 24 February 2012
- » AGL External

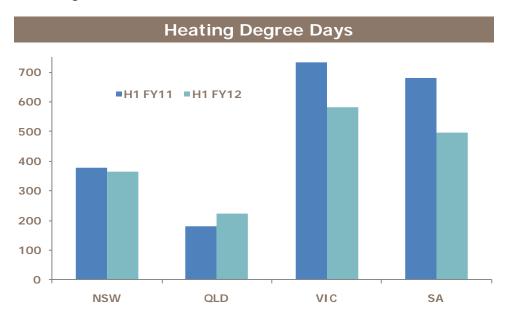

^{1.} Cost to grow per account acquired / retained = costs to win and retain market contracts and transfer customers to AGL divided by contracts acquired plus contracts retained.

^{2.} Cost to serve per customer account = net operating costs less cost to grow divided by average customer accounts.

Retail - Weather

Volume demand characterised by warm winter temperatures.

- > Winter months
 - » Victoria August 2011 3rd warmest average maximum temperatures on record, July and August 1 2°C above average
 - » South Australia July and August 2011: 1 3°C above average, 4th warmest August since 1950 (July and August 2010: 1 3°C below average)
 - » Mild weather impacted Consumer gas volumes

Merchant - Generation: Wind Farm

- Hallett 5 and Oaklands Wind Farm commenced operation during FY12 and will be fully commissioned in Q3 FY12
- Availability lower at Hallett 2 due to constraints for noise control. This has been corrected late in December and availability will return to normal levels

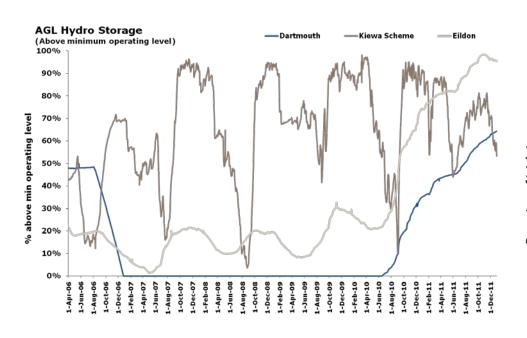

Six months to 31 Dec 2011	Unit	Wattle Point	Hallett 1	Hallett 2	Hallett 4	Hallett 5 ³	Oaklands ³	Total
Capacity	MW	90.8	94.5	71.4	132.3	52.5	67.2	508.7
Availability	%	95.5	94.1	90.1	98.0	94.9	81.3	93.22
Generated Energy ¹	GWh	102.3	165.3	124.8	233.6	53.6	58.3	737.9
Capacity Factor	%	30.9	40.7	40.6	41.0	23.7	20.3	34.6

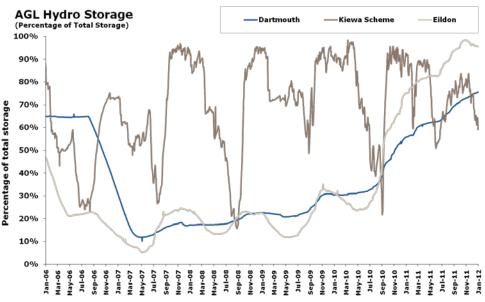

- 1. Energy generated at node
- 2. Total availability is MW weighted
- 3. Still being commissioned

Merchant - Hydrology

- > 52.6% of hydro capacity is linked to drought resistant Kiewa Scheme
- > Dartmouth is fully operational with a current capacity of 151MW. Irrigation releases are expected to be minimal and the dam is expected to remain at its current levels over summer
- Eildon has had high inflows in FY12 thus far and the dam is above 95% capacity. Eildon's current capacity is 120MW and releases are expected to continue prior to winter to allow for future inflows

^{» 24} February 2012

Merchant – Electricity Hedging: Policy

- AGL Risk Management Policy is set by the Board and establishes the requirements for the management of wholesale risk
- > Clearly defined and approved commodity and transaction limits
- > Counter party credit limit tier allocation
- Market price risk is contained with requirements for hedging based upon physical limits and financial limits:
 - » Physical Limits: Appropriate hedges to meet minimum fraction of expected energy load
 - » Financial Limits: Additional limits defined on basis of detailed economic analysis of portfolio dynamics of load, hedge contracts, generation and volatile prices:
 - Earnings at Risk limits are established as the worst outcome expected 1 year in every 10

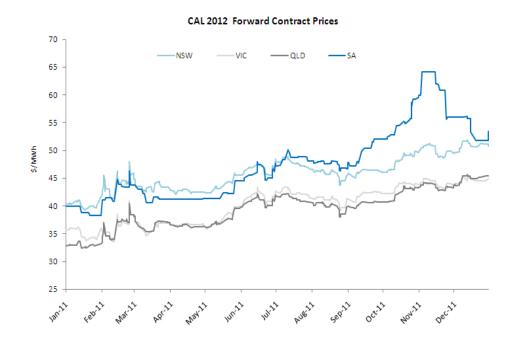

²⁰¹² Interim Results 6 months to 31 December 2011

^{» 24} February 2012

Merchant – Wholesale Electricity Prices

- Forward prices increased in all regions from May 2011 onwards, with most of the uplift seen in Q3 and Q4 Calendar year 2012
- These price increases reflected increased confidence in the Clean Energy Future bills being passed into legislation, taking effect from July 1 2012
- Q1 Calendar year 2012 contract prices also increased toward the end of Calendar year 2011, in part impacted by long-term weather forecasts

Statutory Profit to Underlying Profit Reconciliation

6 months to \$m	31-Dec-11	31-Dec-10
Statutory Profit	117.0	239.6
Adjust for the following after tax items:		
Significant items	-	16.8
Changes in fair value of financial instruments	115.9	(30.2)
Underlying Profit ¹	232.9	226.2

^{1.} Underlying Profit is the Statutory Profit adjusted for significant items and changes in fair value of financial instruments. AGL believes that Underlying Profit provides a better understanding of its financial performance and allows for more relevant comparison of financial performance between financial periods

Underlying Profit has been presented with reference to the Australian Securities and Investment Commission Regulatory Guide 230 "Disclosing non-IFRS financial information" issued in December 2011. AGL's policy for reporting Underlying Profit is consistent with this guidance and the Directors have had the consistency of the application of the policy reviewed by the auditors of AGL.
