ASX RELEASE

Bullabulling Gold Project – Final Resource Infill Drilling Results

Highlights

- Completed Phase Two infill drilling program results finalised.
- 107 drill holes totalling 16,631m completed in November and December 2011.
- Total production for the Phase Two program is 74,542m in 425 holes.
- Development program drilling totals 110,544m in 672 drill holes from commencement in late 2010.
- Drilling results continue to reconcile well against the recent new resource model and include more new high grade intersections.
- New higher grade intersections include 8m at 5.73g/t Au, 1m at 73.10 g/t Au, 17m at 3.37 g/t Au, 8m at 3.35 g/t Au, 1m at 27.70 g/t Au, 9m at 3.52 g/t Au, 1m at 19.30 g/t Au.
- Data have been received from the recently completed seismic survey that enhances the prospectivity of high grade mineralisation at depth along the Bullabulling Trend.

Resource drilling program update

The Phase Two RC resource drilling program, which commenced in mid-May 2011, has been completed and all assays have been returned. Three drill rigs were used during the Phase Two program, infilling the historic drilling between Phoenix and Hobbit to increase the confidence in the current resources and provide a new resource estimate (Figure 1).

Phase Two resource drilling program results - to establish sufficient reserves for an initial ten year mine life

The key aim of the Phase Two resource drilling program was to infill the historic drilling to a drill spacing that allows the Inferred resources in the recently announced resource estimate to be reclassified to an Indicated resource category, and in turn enable initial JORC compliant reserves to be established for the project as part of the current pre-feasibility study. The current reported JORC compliant mineral resource is 78,836,000 tonnes at 1.03 g/t Au (2.60 million ounces contained gold) at a 0.5 g/t Au cut off.

Since the last announcement, where results were reported from November 3 to the completion of the program on December 18 2011, there has been a total of 16,631 metres drilled in 107 holes (Table 1). Total drilling for the Phase Two program is now 74,542m in 425 holes and production since work started on the project by the JV is 110,544m from 672 holes. Work during the reporting period focussed on infill drilling of the areas between Hobbit and Bonecrusher (Figure 1).

The final assays from the infill drilling program continue to confirm the resource estimate and geological model (Table 2). For the reporting period, only 6 holes of the 107 drilled did not intersect mineralisation and since the beginning of the infill drilling program only 17 holes out of the 425 drilled have not intersected mineralisation. The final assays from the program returned a number of significant wide high grade intersections, including: 12m at 1.97g/t Au from 58m in BJ0045, **8m at 5.73g/t Au from 44m in BJ0103**, 34m at 0.66g/t Au from 138m in BJ0143, 14m at 1.94g/t Au from 44m in BJ0261, **4m at 5.34g/t Au from 125m in BJ0261**, **8m at 3.35g/t Au from 5m in BJ0347**, **14m at 2.41g/t Au from 21m in BJ0381**, 26m at 0.83g/t Au from 62m in BJ0381, 19m at 1.31g/t Au from 123m in BJ0384, 16m at 1.44g/t Au from 96m in BJ0394, **3m at 7.50g/t Au from 42m in BJ0526**, **1m at 27.70g/t Au from 180m in BJ0571**, 16m at 1.27g/t Au from 43m in BJ0644, 28m at 1.03g/t Au from 113m in BJ0662, 47m at 0.74g/t Au from 76m in BJ0686, 13m at 1.87g/t Au from 39m in BJ0694, **13m at 2.22g/t Au from 190m in BJ0697**, 29m at 0.87g/t Au from 179m in BJ0698, 25m at 0.98g/t Au from 28m in BJ0718, 29m at 0.95g/t Au from 60m in BJ0719, 19m at 1.46g/t Au from 128m in BJ0721, 41m at 0.90g/t Au from 26m in

BJ0732, 26m at 0.81g/t Au from 149m in BJ0736, **9m at 2.15g/t Au from 29m in BJ0769, 34m at 1.12g/t Au from 94m in BJ0772, 1m at 19.30g/t Au from 100m in BJ0774**, 31m at 0.75g/t Au from 36m in BJ0791, **17m at 3.37g/t Au from 182m in BJ1297, 16m at 1.75g/t Au from 63m in BJ1297, 32m at 0.66g/t Au from 144m in BJ1844, 9m at 3.52g/t Au from 113m in BJ1945, 1m at 73.10g/t Au from 18m in BJ1979**, 14m at 1.54g/t Au from 35m in BJ1996, 18m at 1.60g/t Au from 146m in BJ2070, 17m at 1.15g/t Au from 42m in BJ2106, 17m at 1.27g/t Au from 144m in BJ2113, 25m at 1.06g/t Au from 153m in BJ2340, **12m at 2.12g/t Au from 179m in BJ2341, 8m at 2.44g/t Au from 37m in BJ2349**, 19m at 1.16g/t Au from 72m in BJ2361 and **17m at 2.24g/t Au from 189m in BJ2414.**

As in the previously announced holes, there are generally at least 4 intersections per drill hole relating to the multiple stacked lodes defined by the structural mapping. Approximately 63% of the intersections to date are better than estimated by the model, 30% are similar to the model and 7% are worse or missing as predicted by the new model developed by Snowden. High grade mineralisation continues to be intersected within the broad low grade halo with intersections such as providing additional encouragement for targeting high grade ore shoots within the Bullabulling Trend beneath the currently mineralised stratigraphy. Preliminary results from the magnetic and seismic surveys have located potential feeder zones to the low grade mineralisation in the near surface that may host more continuous higher grade mineralisation than intersected to date.

For further information please check our website (www.auzex.com) or contact John Lawton (Managing Director) or Greg Partington (Operations Director) on +617 3333 2722 and +6144800987 respectively.

Bullabulling Overview

The Bullabulling Gold project (Bullabulling) is a large tonnage, low grade deposit with high grade shoots, associated with the regional Bullabulling shear zone which extends over tens of kilometres. The mineralised structure is 500m wide, consisting of multiple west dipping low grade stacked zones with narrower higher grade gold mineralisation. Bullabulling is located near Coolgardie and approximately 65km south-west of Kalgoorlie, Western Australia. Bullabulling has been previously mined producing 371k oz Au in the 1990's. The current program focuses on the 6km portion of the shear zone known as the Bullabulling Trend where previous operations were concentrated. The focus for the

Bullabulling joint venture with GGG Resources plc is to establish an initial reserve exceeding one million ounces gold to commence production in 2015.

Competent Person Statement

The information in this report that relates to Exploration Results, Mineral Resources and Ore Reserves is based on information compiled by John Lawton who is a full-time employee of the Company and Member of The Australasian Institute of Mining and Metallurgy. He has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". The latest August 2010 Mineral Resource estimate was completed under the overall supervision and direction of Steven Hodgson, MAIG, of CSA Global who is a Competent Person as defined by the Australasian Code for the Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code 2004 Edition). John Lawton and Steven Hodgson consent to the inclusion in this report of the matters based on the information in the form and context in which it appears.
