

Karara Iron Ore Project Pictorial Update

29 March 2012

Magnetite mining has started, with the first blast on the Karara Ridge

Karara Magnetite Processing Plant

The Karara processing plant continues to take shape with structural steel, mechanical and piping work well advanced and electrical and instrumentation work underway.

The Karara processing plant continues to take shape with structural steel, mechanical and piping work well advanced and electrical and instrumentation work underway.

Mining

Magnetite mining has commenced at Karara, using an initial start-up fleet comprising, amongst others, a CAT6050 hydraulic shovel and CAT785 dump trucks, ahead of the arrival of even larger equipment in the permanent fleet.

Infrastructure

Aerial stringing of the 330kV power line is nearing completion.

Locomotives on the Karara rail spur.

The Berth 7 topside module at Geraldton Port, above and below, has been fitted and is awaiting the arrival of the shiploader. The Karara storage facility, right, has been effectively completed and work is continuing on the inloading and outloading facilities.
