|---|----------|----------|----------|
| Ore mined (tonnes) | 655,101 | 622,119 | 621,862 |

| Cash cost per ounce (A\$/oz) – incl royalties | A\$611 | A\$585 | A\$589 |

Regis completed another strong quarter of operations at the Moolart Well Gold Mine producing 26,228 ounces of gold at a pre-royalty cash cost of production of A\$532 per ounce. Gold production for the year to 30 June 2012 was 105,413 ounces at a pre-royalty cash cost of A\$512 per ounce.

Mining

During the quarter 291,000 bcm of ore and 1,315,000 bcm of waste were mined from the Moolart Well open pits for a total material movement of 1.60 million bcm; representing a 14% increase in material mined from the March 2012 quarter. The increase in mined volume is a result of better dig rates achieved in blasted waste in the laterite pits.

The ore mined to reserve reconciliation was positive for the quarter by 901 ounces (3.1%). Mining generated 655,101 tonnes of ore at 1.43g/t for 30,042 ounces compared to the reserve of 510,679 tonnes at 1.77g/t for 29,141 ounces. Mining for the quarter returned lower grade due partly to the mining of additional lower grade ore (as defined by grade control) from outside the reserve areas and partly due to mining dilution in the reserve areas mined.

GARDEN WELL DEVELOPMENT

Background

The Garden Well project is 100% owned by Regis and is located 35 kilometres south of the Moolart Well processing plant where Regis is already producing approximately 100,000 ounces of gold per annum. Regis completed the Definitive Feasibility Study (DFS) for the development of the Garden Well Gold Project in the June 2011 quarter. The results of the DFS show a robust project with the following parameters:

Development Progress

During the June 2012 quarter Regis made significant progress towards the completion of the development of the Garden Well Gold Project, including:

Design

By the end of the quarter all mechanical and electrical design work on the project was complete.

Procurement

The last of the key equipment items arrived on site during the quarter, including the Outotec Scrubber, Derrick and Chemex screens and ROM bin. All major purchases and structural mechanical contracts were practically complete by the end of the quarter.

Civil Works

By the end of the quarter approximately 95% of the required plant site civil works had been completed. The works for the period included the completion of the process water and raw water dams, reclaim and stockpile area and ROM wall. Only final trim earthworks remained to be completed at the end of the quarter.

Concrete

The concrete works contract was completed during the quarter and the contractor demobilised.

CIL Tank Erection

Erection and painting of the CIL tanks and installation of the top of tank steelwork was completed in the March 2012 quarter.

Structural Steel Erection

Approximately 98% of all structural steel and plate work packages have been delivered to site with overall erection 70% complete by the end of the quarter.

Mechanical Installation

Mechanical installation of the ball mill and scrubber was 90% complete by the end of the quarter. Plant wide mechanical installation works were 60% complete by the end of the quarter.

Electrical Installation and Commissioning

All major electrical equipment had been installed in all areas by the end of the quarter. Electrical pre-commissioning of the ball mill and scrubber commenced during the quarter in preparation for ore commissioning. Plant wide electrical and instrumentation installation works were 70% complete by the end of the quarter with the milling and leaching areas fully complete.

Plant Piping

Fabrication and installation of plant piping progressed well during the quarter and was approximately 60% complete by the end of the quarter. Piping is now an area of significant focus in the period leading up to completion of construction and commencement of commissioning.

Tails Storage Facility

Excavation of the TSF keyway was completed in the March 2012 quarter. The construction of the walls of the stage one TSF was completed during the quarter with 650,000 BCM of material placed to take the walls to the required 505mRL level.

Preproduction Mining

Mining in the June 2012 quarter was conducted in the Stage 1 Garden Well open pit down to the 460 mRL from both free dig and blasted cap rock material. A total of 3.0 million BCM of material (predominantly waste) was mined during the quarter. The waste material mined during the quarter was used for construction of the ROM, the western waste dump and the TSF. By the end of the quarter a total of 6.1 million BCM of material had been mined from the stage 1 pit. A small amount (76,000 tonnes) of ore was mined in the June 2012 quarter and carted to the ROM. Significant areas of oxide ore had been exposed in the pit by the end of the quarter to provide ore supply for commencement of milling operations in August 2012.

Development Timetable and Expenditure

Development of the project is on target for commissioning of the processing plant early in August 2012 and commencement of commercial gold production shortly after.

Expenditure committed on project development to the end of the quarter was approximately \$138.3 million, being \$101.1 million on plant construction and \$37.2 million on pre-production mining. The total amount spent to the end of the quarter was \$123.8 million, being \$91.8 million on plant construction and \$32.0 million on pre-production mining.

Garden Well Gold Deposit

RC and diamond drilling continued at Garden Well during the quarter to fully define the strike extent and down dip continuation of gold mineralisation at the southern end of the deposit. A further 49 RC holes (RRLGDRC234-236, 238-239, 241-244, 246-253, 255-280, 283-289) were drilled during the quarter for 8,512 metres at the southern end of the current gold resource, south of line 6912440mN where the deposit is still open along strike and down dip.

Project to date RC drilling at Garden Well totals 261 holes for 52,607 metres on 40 metre spaced east-west traverses over a north-south strike distance of 1,640 metres from 6911640mN to 6913280mN.

Gold assay results were received from RC drilling in the June 2012 quarter. Highlights from this RC drilling include:

RC drilling in 2012 has confirmed that the Garden Well gold mineralised zone extends south to at least 6911640mN, a distance of 480 metres south of the current southern Reserve limit at 6912120mN in the planned open pit. Gold mineralisation remains open to south beyond the current extremity of RC drilling.

A long section of Garden Well with contoured gold gram-metre drill hole intercepts is shown below. This also confirms the development of a possible fourth SSE plunging high grade gold shoot. The extent of current drilling south of the current Ore Reserve boundary and planned additional RC and Diamond drilling are also shown.

The down dip extent of this new gold mineralisation has not been fully defined. RC and diamond drilling is planned to test this new mineralisation down to 300 metres below surface. RC drilling will also continue further south of line 6911640mN (southern extremity of current drilling) with a focus on defining the southern extent of gold mineralisation. A further 60 RC holes are planned to fully define the gold mineralised zone down dip and to the south.

This drilling will continue in the September 2012 quarter and is expected to form the basis of updated Resource and Reserve estimations to be completed in the December 2012 quarter.

Rosemont Gold Deposit

The Rosemont gold project is located approximately 9 kilometres north-west of the Garden Well gold project. Rosemont has a Resource of 21.3MT at 1.57 g/t for 1.08 million ounces of gold and a Reserve of 8.7MT at 1.73g/t for 487,000 ounces of gold. The development of the project is currently the subject of a feasibility study due for completion in the September 2012 quarter.

RC drilling commenced at Rosemont in March 2012 to define the extent of gold mineralisation immediately north of the current Rosemont open pit design. The Resource extends approximately 800 metres north of the current open pit design. In this area the Resource is based on shallow RC and Aircore drilling and is entirely in the Inferred category. The drilling programme completed during the quarter consisted of 51 RC holes for 13,634 metres was designed to convert Resources into the Indicated category and to extend the resource envelope.

Twenty three (23) of the 51 holes in the programme (RMRC001, 003-006, 008, 012-013, 016, 018-021, 023, 034, 036, 038-041, 045-047) were drilled outside of the current Inferred Resource envelope. The remaining holes were drilled inside the Inferred Resource envelope and should provide sufficient density of drilling to allow conversion of resources in this area to Indicated category.

Highlights from RC drilling at Rosemont include:

Holes outside the current Inferred Resource envelope

RMRC003: 2 metres @ 10.13g/t gold from 177 to 179 metres.

The RC drilling completed to date in 2012 has confirmed that the gold mineralised zone at Rosemont continues for at least 800 metres NNW of the current open pit design and is still open north of the current limit of drilling. Further drilling is planned north of the completed RC programme to fully define the northern extent of Rosemont gold mineralisation.

Below is a long section of Rosemont contoured gold gram-metre drill hole intercepts from the recent drilling and past drilling showing the mineralisation north of the current open pit design.

Petra Gold Deposit

The Petra gold deposit is located 15 kilometres east-southeast of the Moolart Well gold plant and has an Inferred gold resource of 400,000 tonnes at 3.12g/t for 42,000 ounces. Previous Aircore drilling has defined a significant quartz lode containing gold mineralisation over a 600 metre strike length. Previous drilling was conducted on lines 180 to 200 metres apart.

Aircore and RC drilling was completed during the March 2012 quarter. Results were received during the June 2012 quarter for the last 19 Aircore holes of the programme. Significant gold assay results from those holes include:

| Hole No | Northing (mN) | Easting (mE) | From (m) | To (m) | Interval (m) | Gold g/t |
|-------------|---------------|--------------|----------|--------|--------------|----------|
| RRLPTRAC400 | 6935648 | 427554 | 65 | 66 | 1 | 34.10 |
| RRLPTRAC402 | 6935563 | 427325 | 41 | 44 | 3 | 10.47 |

All coordinates are AGD 84. Holes drilled at -60° to 090°. All Intercepts calculated using a 0.5g/t lower cut, no upper cut, maximum 2m internal dilution. All assays determined on 1m split samples by fire assay.

The results from the last 6 RC holes in the programme were also received during the quarter. Significant gold assay results from those holes are tabled below:

| Hole No | Northing (mN) | Easting (mE) | From (m) | To (m) | Interval (m) | Gold g/t |

| RRLPTRRC031 | 6936941 | 426580 | 93 | 95 | 2 | 35.15 |

All coordinates are AGD 84. Holes drilled at -60° to 090°. All Intercepts calculated using a 0.5g/t lower cut, no upper cut, maximum 2m internal dilution. All assays determined on 1m split samples by fire assay.

This drilling will be used to complete an updated resource estimate in the September 2012 quarter. Whilst there is little scope for further increasing the gold resources at depth at Petra, there is potential for further gold mineralisation to the north along strike of the current mineralisation envelope. Further RC drilling will continue along strike to the north of the Petra gold deposit. The potential to extend the mineralisation along strike to the north can now be tested following the recent grant of a prospecting licence which covers a 300 metre northern strike extension to the existing quartz lode.

Regional Gold Exploration

Anchor South Gold Target

During the March 2012 quarter 35 Aircore holes (CPAC020-054) were drilled at Anchor South (4.5 kilometres south of the Anchor pit) to follow up anomalous gold mineralisation identified by drilling in 2011. The target was the main gold shear zone extending south through the Anchor open pit under shallow palaeochannel material. Gold mineralisation trends north-south over a strike distance of 500 metres and has a moderate east dip. Gold grades are strongly influenced by the saprock weathering interface.

Results of the first 19 holes were included in the March 2012 quarterly report. Significant assays results for the last 16 holes in the programme are shown below.

| Hole No | Northing (mN) | Easting (mE) | From (m) | To (m) | Interval (m) | Gold g/t |

| RRLCPAC043 | 6934172 | 434938 | 59 | 62 | 3 | 3.38 |
| RRLCPAC045 | 6934455 | 434913 | 85 | 88 | 3 | 5.19 |

All coordinates are AGD 84. Holes drilled at -60° to 270°. All Intercepts calculated using a 0.5g/t lower cut, no upper cut, maximum 2m internal dilution. All assays determined on 1m split samples fire assay.

Wireframes will be updated and the economic potential of the project will be reviewed during in the September 2012 quarter.

Gum Well Corridor

Numerous gold targets have been identified under shallow palaeochannel cover in the Gum Well to Hootanui corridor over a 20-30 kilometre strike north west of Rosemont. The gold bearing shear zone hosts significant known gold deposits (the largest of which is Rosemont) and to date very limited effective drilling has been undertaken to test the strike extent of the structure.

During the quarter 223 Aircore holes were drilled (RRLSSAC044-266) for 18,700 metres in the Gum Well Corridor area. All drilling was sampled on 4 metre composite intervals and analysed for gold and base metals. Analytical results were received for 4 metre composite samples for holes RRLSSAC019-207, and 1 metre re-samples from holes RRLSSAC017, 054, and 081. Results for RRLSSAC208-266 are pending.

Significant gold results from assays received to date include:

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
