

Solar panel installation

Mr Stone Wang is pleased to announce that Artemis Energy Solutions has recently completed its biggest solar project through AES Lismore. The customer, Main Star a local manufacturing company, installed a 98kw solar power system in conjunction with an LED lighting upgrade.

The system was commissioned in September and includes a wi-fi real time monitoring system. It generates approximately 151,800 kwh of electricity per annum and reduces CO2 by approximately 160 tones per annum.

The success of this project has generated sales leads in the Lismore region of over \$2 million. It is expected that these projects will be installed over the next 6 months.
