ASX / Media Announcement

6 March 2013

Summa Resources Share Sale Agreement Update

Carbon Energy Limited (ASX:CNX; OTCQX:CNXAY) entered a Share Sale Agreement with Summa Resource Holdings LLC (Agreement) (refer to ASX Announcement on 23 February 2011), pursuant to which it acquired two companies which held rights to projects in Wyoming (USA), North Dakota/Montana (USA) and Amasra (Turkey).

On completion of the Agreement in April 2011, Carbon Energy issued US\$10million of shares to Summa Resource Holdings LLC.

The Agreement provided for two further tranches of US\$4.5 million of Carbon Energy shares each, for a total of US\$9 million (based on a specified 30 day VWAP) to be issued subject to meeting key development milestones.

The relevant milestones under the Agreement have not been met, notwithstanding Carbon Energy having taken all required steps and having used its best endeavours. Accordingly, no further shares will be issued under the Agreement.

Carbon Energy retains its contractual rights with Anadarko Land Corporation and Great Northern Properties (subsidiary of the Quintana Capital Group) to continue to explore and lease coal tenements in Wyoming, Montana and North Dakota.

The Company is not seeking to commercialise any of the US resources within the short to medium term due to unfavourable project economics resulting from the current oversupply of gas in the US market.

Additionally, an independent geological report received by the Carbon Energy on the coal resource near Amasra (Turkey) shows that these coal resources do not meet fundamental UCG requirements and do not represent a large enough coal resource to economically extract syngas.

ENDS

For and on behalf of the Board

Morne Engelbrecht

Acting Chief Executive Officer

ABOUT CARBON ENERGY

Carbon energy specialises in underground coal gasification (UCG). Our proprietary keyseam® technology is the key to unlocking new energy sources, transforming stranded, deep or otherwise inaccessible coal resources into high-value fuels with lower carbon emissions.

Carbon Energy's complete end-to-end UCG services deliver world-class gas projects from initial project assessment through to commercial project development, operations, site decommissioning and rehabilitation.

Carbon Energy achieved Proof of Concept of its technology following 10 years of research with Australia's premier scientific research agency, the Commonwealth Scientific and Industrial Research organisation (CSIRO), 5 years of in-field trials and over \$150 million investment in technology development.

By successfully proving our keyseam technology, we have earned a reputation for delivering consistent, high quality product gas which can be used to produce power, fertilisers and pipeline quality gas. keyseam maximises resource efficiency, extracting up to 20 times more energy from the same resource than coal seam gas (CSG), whilst preserving groundwater quality.

Carbon Energy also has previously announced three wholly-owned assets available for development:

- 1.4 billion tonnes¹ of JORC Inferred Coal Resource in southeast Queensland's Surat Basin which is part of a 4 to 8 billion tonnes of Exploration target for coal;
- 910 million tonnes² of JORC Inferred Coal Resource in Wyoming USA plus an additional 423 million tonnes exploration potential; and
- 743PJ of Certified 2P syngas reserves³ in southeast Queensland's Surat Basin.

The Company is headquartered in Brisbane, Australia, listed on the Australian securities Exchange (ASX) as CNX and is quoted on the OTCQX International Exchange as CNXAY in the united states. Carbon Energy is developing potential UCG projects in Australia, China, Chile and the United States.
