GOLD MINERALISATION DEFINED OVER 800M ON KABOTSHOME PROSPECT, MANIEMA PROJECT, DRC

Highlights

- Mineralisation reported from all drill holes covering 800m of the Kabotshome structure
- Latest diamond drilling results include:
 - **2.85m @ 10.35g/t Au from 16m and 20.4m @1.87g/t Au from 96.6m including 5.98m @ 3.49g/t Au**
 - **7m @ 5.14g/t Au from 91m**
 - **7.65m @ 1.51g/t Au from 93.5m**
- All results have been released from the drilling programme at Kabotshome

Erongo Energy Limited (ASX: ERN) (the "Company") is pleased to announce results from the remaining four diamond drill holes completed on its Kabotshome Prospect, at the Maniema Gold Project ("Maniema Project") in the Democratic Republic of Congo (DRC).

The programme of seven holes for 1,332m tested grade and width over 800m of the mineralised structure on fences drilled 100m apart.

Recent results shown in Table 1 and Figure 1 included:

- **KBD11: 2.85m @ 10.35g/t Au from 16m and 20.4m @1.87g/t Au from 96.6m including 5.98m @ 3.49g/t Au**
- **KBD12: 7m @ 5.14g/t Au from 91m**
- **KBD13: 7.65m @ 1.51g/t Au from 93.5m**

All three drill holes intersected gold mineralisation along the Kabotshome structure which was exposed over 800m from trenching. This mineralisation is from surface and is open to the north, south and at depth. The best intersection was from **KBD07** which reported **20.25m @ 2.5g/t Au** (from 319m) including **8m @ 4.03g/t Au** and **21.7m @ 3.58g/t Au** (from 354m) including **5.7m @ 8.74g/t Au** down to 350m below surface.

One drill hole was completed to test a second zone with gold in soil support identified from geophysics along the sediment-mafic volcanic contact to the east of the main Kabotshome structure. No significant intercept was recorded in this drill hole.

The Company will now assess all drill results received to date from the Kabotshome Prospect and plan future work programmes on the target area. The Company will also assess the mineralised potential of all additional targets identified previously on the Maniema Project.

The information in this report that relates to exploration results is based on information compiled by Mr Mark Gasson who is a member of the Australasian Institute of Mining and Metallurgy. Mr Gasson, the Managing Director of the Company, has sufficient relevant experience in respect of the style of mineralization, the type of deposit under consideration and the activity being undertaken to qualify as a Competent Person within the definition of the 2004 Edition of the AusIMM's "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Gasson consents to the inclusion in this report of the matters that are based on his information in the form and context in which it appears.

Table 1: Summary of Latest Drill Holes and Significant Intersections Received, Kabotshome Prospect, Maniema Project, DRC

Hole_ID	Easting (mE)	Northing (mN)	EOH (m)	Dip (deg)	Azim (deg)	From (m)	To (m)	Width (m)	Au (ppm)
