ASX ANNOUNCEMENT

FDA Approval for Medical Devices

Medical Developments International Limited (ASX:MVP) is delighted to announce that it has received 510(k) approval from the FDA to sell its range of Space Chamber Plus Medical Devices in the USA.

The FDA approval gives MVP the opportunity to sell the Space Chamber Plus range into the largest Respiratory Devices market in the world, effective immediately. MDI estimate more than 20,000,000 space chambers are sold each year in the USA and given the characteristics and leading performance of our range of devices, MDI hope to win significant market share over the coming months and years.

MVP CEO, Mr. John Sharman speaking from the USA said "the FDA approval is a great achievement for our company. We are in discussion with a number of business partners in the USA at the date of this release and we are hopeful we can agree formal arrangements in due course which will deliver significant sales."

"MVP's Space Chamber and Space Chamber Plus deliver category leading performance for Asthma and COPD sufferers. Both devices have MVP's patented Cross Valve technology which allows patients to manage their disease more effectively and deliver medication more efficiently. In obtaining FDA approval, MVP completed several independent clinical trials proving the Space Chambers' performance as "best practice" which is an outstanding result for our company".
