

Addendum to BESTMED reseller agreement announcement

PainChek® Ltd (ASX: PCK) ("PainChek®" or "the Company"), developer of the world's first smart-based pain assessment and monitoring application, refers to the announcement lodged on 13 November 2024 and provides the following further information.

This new agreement is a 12-month rolling agreement with a 3-month notice period on either side and builds on the existing PainChek/BESTMED integration agreement that helps deliver best practice pain medication management. The Company is unable to provide an estimate for the revenue to be derived from this new reseller agreement which is based on best efforts by BESTMED to sell the PainChek technology to their existing 1,100 homes supporting more than 100,000 Australians within the Australian Aged Care and Home Care sectors.

This announcement has been authorised for release by PainChek CEO Philip Daffas.

About PainChek®

[PainChek®](#) is the world's first regulatory-cleared medical device for the assessment of pain, enabling best-practice pain management for people living with pain in any environment, from those who cannot reliably self-report their pain, those who can, and for those whose ability to self-report their pain fluctuates.

The PainChek® app is available on smartphones and tablets and combines PainChek's AI pain assessment tool, which intelligently automates the multidimensional pain assessment process, with the Numerical Rating Scale (NRS). This hybrid functionality allows accurate, consistent pain assessment at the point of care, and for care to be considered in PainChek's detailed reporting suite, PainChek® Analytics.

Globally, PainChek® has attained regulatory clearance as a medical device in Australia, Canada, the European Union, New Zealand, Singapore, Malaysia, and the United Kingdom, with FDA review in the United States currently in progress.

PainChek® has contracts with over 1,600 aged care facilities, with more than 7,000,000 digital pain assessments conducted to date, and is trusted by thousands of nurses, carers, and clinicians.

Using PainChek®, facilities can:

- Ensure greater consistency, continuity, and diagnostic certainty in pain assessment and management by decreasing subjectivity and removing unintentional assessor bias
- Streamline the pain assessment process for time-poor carers, with access to the PainChek® tool, the NRS, pain trends, and charting in one solution
- Simplify record-keeping and documentation to demonstrate compliance and support funding claims, with all historical pain assessment data in one place
- Enhance engagement with GPs and allied healthcare professionals

Clinical studies conducted in Australian and UK residential aged care centres have been published in various peer-reviewed journals including the [Journal of Alzheimer's Disease](#). An article in [BMC Geriatrics](#) indicates that PainChek® is a valid and reliable instrument to assess the presence and severity of pain in people with moderate-to-severe dementia living in aged care. Further information on clinical studies can be found [here](#).

PainChek® has successfully supported accurate pain assessment and management for thousands of adults worldwide living with dementia, disability, or other conditions impacting their ability to self-report pain. Building on the success of this technology, the clinically validated [PainChek® Infant app](#) identifies and detects six facial action units indicative of pain in infants aged one month to 12 months.

The need for PainChek as a best-practice pain management solution also extends to older people living at home and with access to home care packages that enable long-term home living. PainChek is expanding into home care by partnering with home care and disability service providers.

About BESTMED:

Safer, easier, better medication management

BESTMED provides a complete medication management solution connecting medication prescribing, dispensing and administration to a single resident medication record. Cloud-based, real-time and transcription-free, BESTMED is an industry leader in developing systems for pharmacy, aged care, home care and clinicians to improve safety, efficiencies and reporting to meet aged care requirements. All users on the BESTMED network benefit from intelligent automated workflows that significantly reduce the errors that arise from manual processing and gain exceptional operational efficiency.

BESTMED continues to invest significantly in research and development to eradicate medication errors and is working on next-generation solutions in partnership with leading university researchers.
