MELBOURNE VIC 3000

Dear Ash

Request for Trading Halt

Sparc Technologies Limited (ASX: **SPN**) (the **Company**) requests an immediate halt to the trading of the Company's quoted securities on the Australian Securities Exchange (**ASX**) in accordance with ASX Listing Rule 17.1.

The trading halt is requested pending an announcement to be made by the Company to the market in connection with a material capital raising ("purpose").

In accordance with Listing Rule 17.1, the Company provides the following information in relation to the request:

1. The trading halt is necessary to assist the Company in managing its continuous disclosure obligations as the Company expects to make a material announcement to the market for the stated purpose.
2. The Company requests that the trading halt remains in place until the earlier of commencement of normal trading on Thursday 1 May 2025, or when the announcement regarding the purpose is released to the market.
3. The Company expects to make the announcement to the market before the commencement of normal trading on Thursday 1 May 2025.
4. The Company is not aware of any reason why the trading halt should not be granted or of any further information necessary to inform the market about the trading halt.

-ENDS-

About Sparc Technologies

Sparc Technologies Limited ('Sparc', ASX: SPN) is an Australian technology company developing solutions that enhance environmental and sustainability outcomes for global industries. Sparc has two transformative technology areas in which it works: green hydrogen and graphene enhanced materials. Sparc conducts research and development in-house and has extensive engagement and relationships with the university sector in Australia and globally.

1. **Sparc Hydrogen** is a joint venture between Sparc Technologies, Fortescue Limited and the University of Adelaide which is pioneering next-generation green hydrogen production technology. Photocatalytic water splitting (PWS) is an emerging method to produce green hydrogen without electrolyzers - using only sunlight, water and a photocatalyst. Given lower infrastructure requirements and energy use, PWS has the potential to deliver cost and flexibility advantages over existing hydrogen production methods.
2. Sparc has developed and is commercialising a **graphene based additive** product, **ecosparc®**, which at low dosages significantly improves the performance of commercially available epoxy-based protective coatings. Sparc has commissioned a manufacturing facility to produce **ecosparc®** and is engaging with global coatings companies and large asset owners on testing, trials and commercial partnerships.
