ANDOVER WEST WORK CONTINUES AND ERRABIDDY COMES TO FOCUS

Errawarra Resources Ltd (ASX:ERW) (**Errawarra** or the **Company**) wishes to provide its shareholders with an update in respect of its activities.

ANDOVER WEST NICKEL

As recently announced on 20 September 2022¹, Errawarra has commenced work on the Andover West project, 30kms south-east from Karratha. Mapping and reconnaissance work has begun, and heritage clearance undertaken by Ngarluma Aboriginal Corporation is almost complete.

Following receipt of heritage clearance, ground disturbing activities including drilling will get underway. In the interim ground FLEM (fixed loop electromagnetic) survey work over the priority target areas is planned to take place in the coming weeks.

Andover West covers an area of 110km² in a favourable geological setting for nickel, close to Azure Minerals' Andover Project, which hosts a Mineral Resource of 4.6Mt @1.11% Ni, 0.47% Cu and 0.05% Co².

REE POTENTIAL ERRABIDDY

The Company is also pleased to report on its Errabiddy Project. The Errabiddy Project is located in the Gascoyne Region of Western Australia approximately 190km northwest of Meekatharra and 360km east of Carnarvon and within the Shires of Upper Gascoyne and Murchison.

Errawarra's tenement package includes rock types prospective for intrusion hosted nickel-copper mineralisation and orogenic gold and is in a region that is experiencing considerable exploration activity from companies including Chalice Mines Ltd.

¹ Refer ASX Announcement Errawarra Resources Ltd, 20 September 2022, Nickel Exploration Commences at Andover West.

² Azure Minerals Limited ASX announcement 30 March 2022 "Azure Delivers Maiden Mineral Resource for Andover"

The project is located within the Errabiddy Shear Zone and only ~25kms from Desert Metals Ltd (ASX:DM1) Innouendy prospect. DM1 recently announced Total Rare Earth Oxide (**TREO**) results from its current drill program³ including the following intercepts;

- ▶ 21m @ 1176ppm from 4m (incl 12m @ 1490ppm)
- ▶ 8m @ 2734ppm from 24m (incl 3m @ 4104ppm)
- ▶ 17m @ 1347ppm from 28m (incl 8m @ 2085ppm, incl 4m @ 2791ppm)
- ▶ 8m @ 1429ppm from 20m (incl 4m @ 2040ppm)

These Rare Earth Element (**REE**) occurrences have been reported by Desert Metals to be associated with near surface clays. Errawarra is currently assessing the potential for this style of REE mineralisation to also occur within its Errabiddy tenement package.
