The primary investment objective of Duxton Water ("the Company") is to build a portfolio of permanent water entitlements and utilise this portfolio to provide flexible water supply solutions to our Australian farming partners. The Company generates a return by offering irrigators a range of supply solutions including long-term entitlement leases, forward allocation contracts and spot allocation supply.

Portfolio Managers' Update

Duxton Water held its 2024 Annual General Meeting on 30 May 2025, where shareholders approved the Internalisation proposal that was first announced on 4 April 2025. The Company would like to thank shareholders for their continued support and confidence in the Company's long-term strategy. While we will continue to prioritise operations and portfolio performance, we look forward to completing the transition to a fully internalised business within the next 18 months.

On 15 May 2025, the Company was pleased to announce that the \$121 million sale of entitlements to the Australian Government had settled. Proceeds from this sale have been received, and \$108 million has been used to repay debt. As a result, the Company now has a Net Debt Ratio (or "LVR") of approximately 3%. This puts the Company in a great position to take advantage of attractive opportunities as they arise.

During May, the size of the Duxton Water portfolio remained relatively stable. The Company acquired a small parcel at an attractive price in the lower Murray that fits well within the current portfolio. The Company continues to look for well-priced opportunities in zones where the Company sees long-term value.

With respect to the water entitlement market, there have been no significant changes to valuations in the month of May. As a result, portfolio valuations and net asset value have remained relatively unchanged from last month.

Allocation prices continued their upward trend through the end of May, trading at around \$250-\$300/ML in the lower Murray. Price increases were observed across all major water zones compared to April. This represents a notable contrast to the same period in recent years, when wet conditions had driven prices downwards by the end of the water year.

Looking ahead, the weather outlook for July to September 2025 indicates average rainfall conditions across most of the southern Murray Darling Basin. The past few months, including May, have been notably dry. Although early June rainfall has marginally improved storage levels, major dams across the basin remain approximately 54% full¹. The Company believes winter rainfall will be critical in shaping allocation market dynamics for the 2025-2026 water year.

State Resource Manager forecasts remain largely unchanged. They anticipate that high security entitlements in the NSW Murray and Murrumbidgee will open at 97% and 95%, respectively. In Victoria, they anticipate opening allocations to be 25% or above, with progressive increases to occur throughout the year. Total seasonal determinations for Victorian high reliability entitlements are forecast to range between 38% and 100% by February 2026, depending on storage inflows and prevailing weather conditions².

With one month remaining in the current water year, Duxton Water is focused on preparations for the new water year. The Company has been successful in securing several leases for next season. Based on current contracts, the Company expects to be 52% leased from 1 July 2025.
