Mr Grove has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the “Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves”.

Mr Grove consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

### ASX chapter 5 compliance

The information in this presentation relating to the Mineral Resource Estimate for Warriedar is extracted from Warriedar’s ASX announcement titled “Ricciardo Delivers Australia's Largest Open-Pit Sb Resource” released to ASX on 5 May 2025 which is available on Warriedar’s website <https://warriedarresources.com.au/>. Warriedar confirms that it is not aware of any new information or data that materially affects the information included in the original announcement, and that all material assumptions and technical parameters underpinning the estimates in the original announcement continue to apply and have not materially changed. Warriedar confirms that the form and context in which the competent person’s findings are presented have not been materially modified from the original announcement.

### Competent Person Statements | Big Springs

The information in this report related to Exploration Results is based on information compiled by Mr Peng Sha. Mr Sha is an employee of Warriedar and a member of the Australasian Institute of Mining and Metallurgy (“AusIMM”) and has sufficient experience of relevance to the styles of mineralisation and types of deposits under consideration, and to the activities undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (“2012 JORC Code”). Mr Sha consents to the inclusion in this report of the matters based on his information in the form and context in which they appear.

The information in the release that relates to the Estimation and Reporting of the Big Springs Mineral Resources has been compiled and reviewed by Ms Elizabeth Haren of Haren Consulting Pty Ltd who is an independent consultant to Anova Metals Ltd and is a current Member and Chartered Professional of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. Ms Haren has sufficient experience, which is relevant to the style of mineralisation and types of deposits under consideration and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the “Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves (The JORC Code). Ms Haren consents to the inclusion in this report of the matters based on his information in the form and context in which they appear.

## Appendix 2 | Warriedar Gold Equivalent Calculation Methodologies

### RICCIARDO Sb MRE – Resource (refer ASX Release 5 May 2025)

Warriedar considers that both gold and antimony included in the gold equivalent calculation (AuEq) have reasonable potential to be recovered at Ricciardo, given current geochemical understanding, geologically analogous mining operations and historical resource estimation.

For the purposes of its AuEq calculation methodology, Warriedar considers it appropriate to adopt the gold and antimony prices US\$2,500/oz gold and US\$45,000/t antimony, while current spot prices for gold and antimony are ~US\$3,270/oz and US\$ 55,457/t (antimony Ingot 99.65% min-Warehouse Rotterdam-21 April 2025).

Gold processing recovery of 95% has been applied in the formula, based on previously release metallurgy work “Initial Metallurgical Test Work Delivers High Gold Recoveries – ASX release 28 Oct 2024”. Antimony processing recovery of 81% has been applied in the formula, based on previously release metallurgy work “Higher Grade Antimony Concentrate Delivered at Ricciardo – ASX release 16 Jan 2024”.

These assumptions result in a chosen AuEq calculation formula for Ricciardo of:

$$AuEq \text{ (g/t)} = Au \text{ (g/t)} + 4.77 \times Sb \text{ (\%)}$$

This formula is deemed appropriate for use in the antimony MRE at Ricciardo. In Warriedar’s opinion all the elements included in the metal equivalents calculation have reasonable potential to be recovered and sold.

### RICCIARDO Sb Exploration results (refer ASX Release 21 June 2025)

Warriedar considers that both gold and antimony included in the gold equivalent calculation (AuEq) have reasonable potential to be recovered at Ricciardo, given current geochemical understanding, geologically analogous mining operations and historical resource estimation.

For the purposes of its AuEq calculation methodology, Warriedar considers it appropriate to adopt the gold and antimony prices utilised for Larvotto Resources’ (ASX: LRV) Hillgrove Gold-Antimony Project Pre-Feasibility Study (being US\$2,200/oz gold and US\$15,000/t antimony) (refer LRV ASX release dated 5 August 2024).

An assumed mineral recovery of 90% has been applied in the formula after reviewing the recoveries of typical antimony projects in Australia including Hillgrove and Costerfield. Expected recoveries will be updated once sufficient data has been obtained from future metallurgical study.

These assumptions result in a chosen AuEq calculation formula for Ricciardo of:

$$AuEq \text{ (g/t)} = Au \text{ (g/t)} + 2.12 \times Sb \text{ (\%)}$$

This formula is deemed appropriate for exploration results at Ricciardo and other deposits within the Golden Range Project (to facilitate easy comparison), prior to updating the equation for Mineral Resource reporting (as was the case for the Ricciardo Sb MRE); and is the same as that used for initial reporting of results at Ricciardo, refer ASX Release 1 October 2024. In Warriedar’s opinion all the elements included in the metal equivalents calculation have reasonable potential to be recovered and sold.
