NICKEL EXPLORATION COMMENCES AT ANDOVER WEST

- **Mapping and reconnaissance work underway**
- **Heritage and geophysical surveys over priority EM target area scheduled for September**
- **Drilling program testing priority EM target and downhole EM survey to commence in October, subject to approvals**

Errawarra Resources Ltd (ASX:ERW) (**Errawarra** or the **Company**) is pleased to advise that exploration activities are now underway at the Company's Andover West nickel project in the West Pilbara region of Western Australia following the grant of tenement E47/4352 earlier this month.

Errawarra has begun mapping and reconnaissance work at Andover West with a heritage survey coordinated by the Ngarluma Aboriginal Corporation to be conducted over the area hosting the priority electromagnetic (**EM**) target on 23 September 2022.

A fixed loop electromagnetic (**FLEM**) survey is also scheduled to take place over the target area before the end of the month. This survey will be carried out by a Southern Geoscience field team over 1 - 2 days using a more advanced FLEM system than was originally used to define several EM anomalies including the priority target in 2006.

Figure 1: Outcropping gossanous ironstone at Andover West Target

Andover West covers an area of 100km² in a favourable geological setting for nickel, close to Azure Minerals' Andover Project, which hosts a Mineral Resource of 4.6Mt @1.11% Ni, 0.47% Cu and 0.05% Co¹.

Completion of the heritage survey should provide clearance for Errawarra to commence ground disturbing activities including drilling on the Project.

The Company has engaged a drilling contractor and anticipates that the initial program comprising core drilling of up to two holes followed by downhole EM surveying will start in October, subject to the usual regulatory approvals.

Downhole EM surveying is considered a superior targeting tool compared to surface EM surveying in massive sulphide exploration as it can provide a more accurate vector to massive sulphide targets.

Follow-up exploration activities will be planned as warranted by assay and downhole survey results.
