

## NEW MINERALISATION DISCOVERED AT DYNASTY

### Key Highlights

- **Diamond drilling has confirmed new shallow mineralisation with significant results including:**
  - **IGDD24-041:**
    - **2.6m @ 3.5 g/t Au, 21.5 g/t Ag** from 26.8m &
    - **3.7m @ 2.5 g/t Au, 9.9 g/t Ag** from 92.9m
- **Iguana resource drilling has confirmed down-dip resource extensions, with significant results including:**
  - **IGDD24-036:**
    - **5.4m @ 2.3 g/t Au, 5.7 g/t Ag** from 49.9m &
    - **2.3m @ 2.7 g/t Au, 5.9 g/t Ag** from 212.1m
- **31 holes for 7,970m completed of the 10,000m Dynasty resource drilling program. Results returned for 25 holes and pending from 6 holes, with further assays expected to be delivered in the coming fortnight.**
- **Dynasty 3D geological model updated incorporating latest drill results in preparation for the planned resource update.**
- **Heavy rainfall was experienced in March, with drilling activities suspended until weather conditions are expected to improve in late April. Remaining resource drilling will be accelerated once activities recommence.**

### Titan's CEO Melanie Leighton commented:

*"We are pleased to deliver further extensional results from Iguana resource drilling which has confirmed shallow extensional resources in new areas. In fact, results returned from IGDD24-041 were both wider and higher grade than that returned from trenches at surface, which bodes well for targeting additional shallow resources, just below the surface at Iguana."*

*"Despite a slowdown in drilling activities due to weather conditions, the geology team have used this time to clear the decks, review latest drill results, and in doing so have identified new targets that are set to be drill tested when drilling recommences in the coming two weeks."*

*"Titan has a strong balance sheet with a clear runway to accelerate resource and exploration drill programs at Dynasty, while JV & Earn-in Partner, Hancock Prospecting, undertake a 10,000m porphyry copper drilling program at the Linderos Project to earn a 25% interest in the project."*

*"We look forward to delivering exciting news on multiple fronts in the coming weeks ahead across our portfolio of large-scale gold and copper projects."*

## Dynasty Resource Drilling Update

Titan Minerals Limited (**Titan** or the **Company**) (**ASX:TTM**) is pleased to provide an update on the Company's 100% held Dynasty Gold Project (**Dynasty**), where it has been undertaking a 10,000m resource drilling program with an aim to substantially grow Dynasty's **3.1 Moz gold and 22 Moz silver Mineral Resource**.

Drilling has largely been directed toward the Cerro Verde and Iguana prospects with encouraging results returned to date. A total of 31 diamond holes have been completed for 7,970 metres, with results now returned for 25 holes and results pending for another 6 holes completed at Cerro Verde.

Latest results returned from the Iguana prospect include several significant results as described below.

### IGDD24-041

Drillhole IGDD24-041 was drilled to test mineralisation to the south of Iguana East in an area never previously been drilled. The hole was successful in confirming three mineralised veins from very shallow depths, defining new mineralisation from surface down to ~100m vertical.

Previous resources in this area were limited, so the discovery of two additional near surface mineralised veins indicates the potential for shallow resource growth. Mineralisation intersected in IGDD24-041 remains open at depth and along strike, with further drilling planned to define mineralisation extensions and resources.

Significant intercepts include:

- **2.6m @ 3.5 g/t Au, 21.5 g/t Ag** from 26.8m &
- **3.7m @ 2.5 g/t Au, 9.9 g/t Ag** from 92.9m

### IGDD24-036

Drillhole IGDD24-036 was designed to test down-dip resource extensions at Iguana. The hole was successful in confirming and extending mineralisation a further 50m below previous drilling, also validating historical drill intersections of 2.9m @ 4.0 g/t Au from 97.4m in DDH134 and 1.6m @ 1.8 g/t Au from 154.9m in IGD006. Drillhole IGDD24-036 will likely contribute to a resource upgrade in this area- confirming extensional down-dip growth, improved grade and improved confidence.

Significant intercepts include:

- **5.4m @ 2.3 g/t Au, 5.7 g/t Ag** from 49.9m &
- **2.3m @ 2.7 g/t Au, 5.9 g/t Ag** from 212.1m

### IGDD24-040

Drillhole IGDD24-040 was designed to test down-dip resource extensions at Iguana. The hole was successful in confirming and extending mineralisation a further 50m below previous drilling.

- **1.4m @ 3.4 g/t Au, 42.9 g/t Ag from 211.3m**, within a broader intersection of 4.7m @ 1.3 g/t Au, 15.6 g/t Ag

These latest Iguana results are in addition to previously announced shallow significant intercepts including:

- **15.5m @ 3.0 g/t Au, 22.8 g/t Ag** from 89.1m in IGDD24-027
- **3.0m @ 4.9 g/t Au, 11.2 g/t Ag** from 21.8m in IGDD24-031

- **2.0m @ 2.5 g/t Au, 4.2 g/t Ag** from 53.2m in IGDD24-030
- **2.8m @ 2.0 g/t Au, 2.6 g/t Ag** from 206.0m in IGDD24-028

Drill results are pending for 6 holes completed at Cerro Verde. The Company anticipates further results to be released in the coming fortnight. The Company intends to accelerate resource drilling once field operations recommence and looks forward to providing further updates as exploration and resource drilling programs advance at the Dynasty Gold Project.

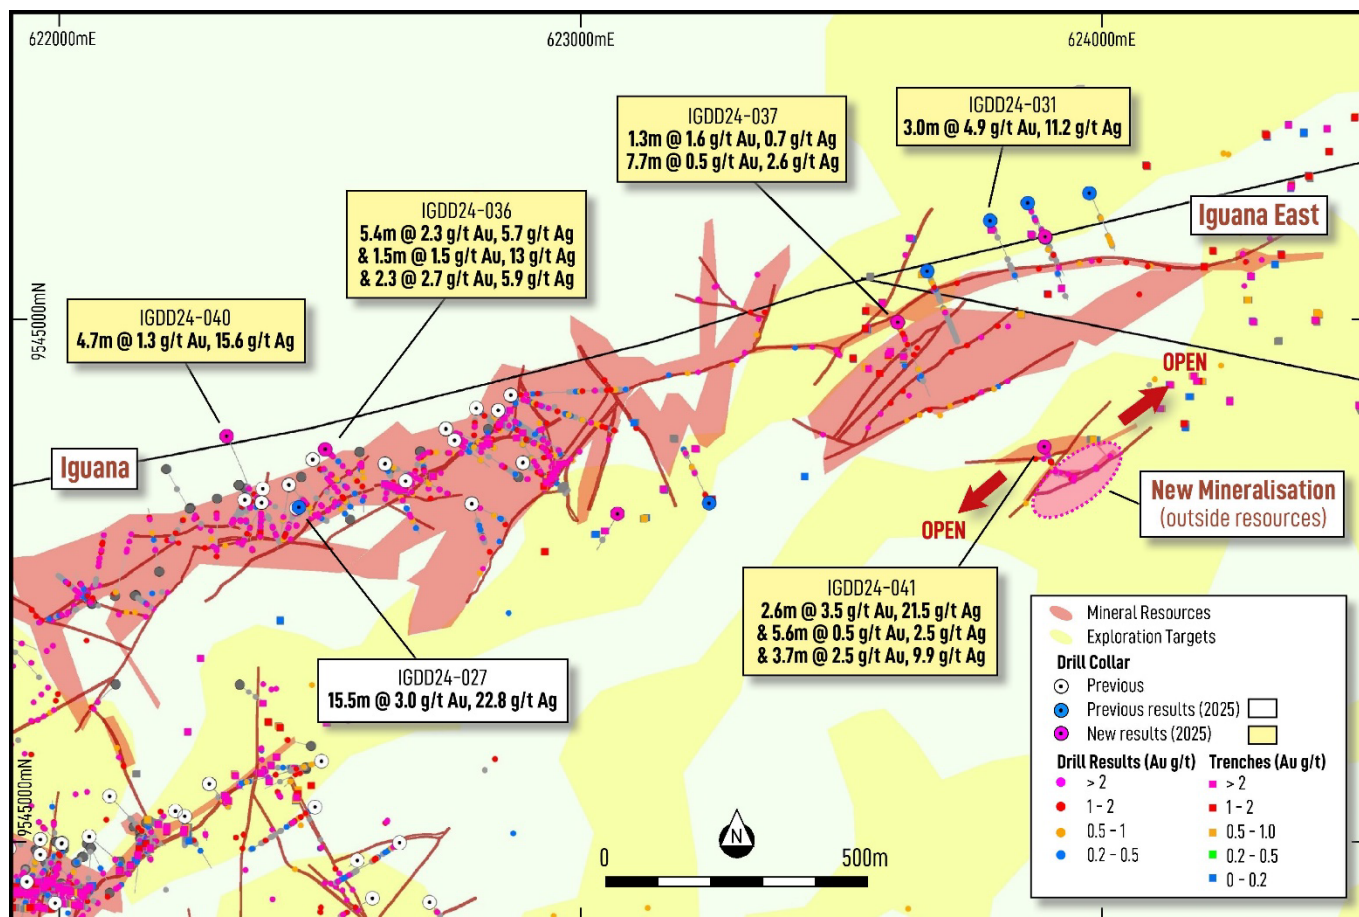

Figure 1. Iguana prospect displaying interpreted geology, modelled veins, resources, resource extensional targets, trenching and drilling completed and latest significant drill intercepts.

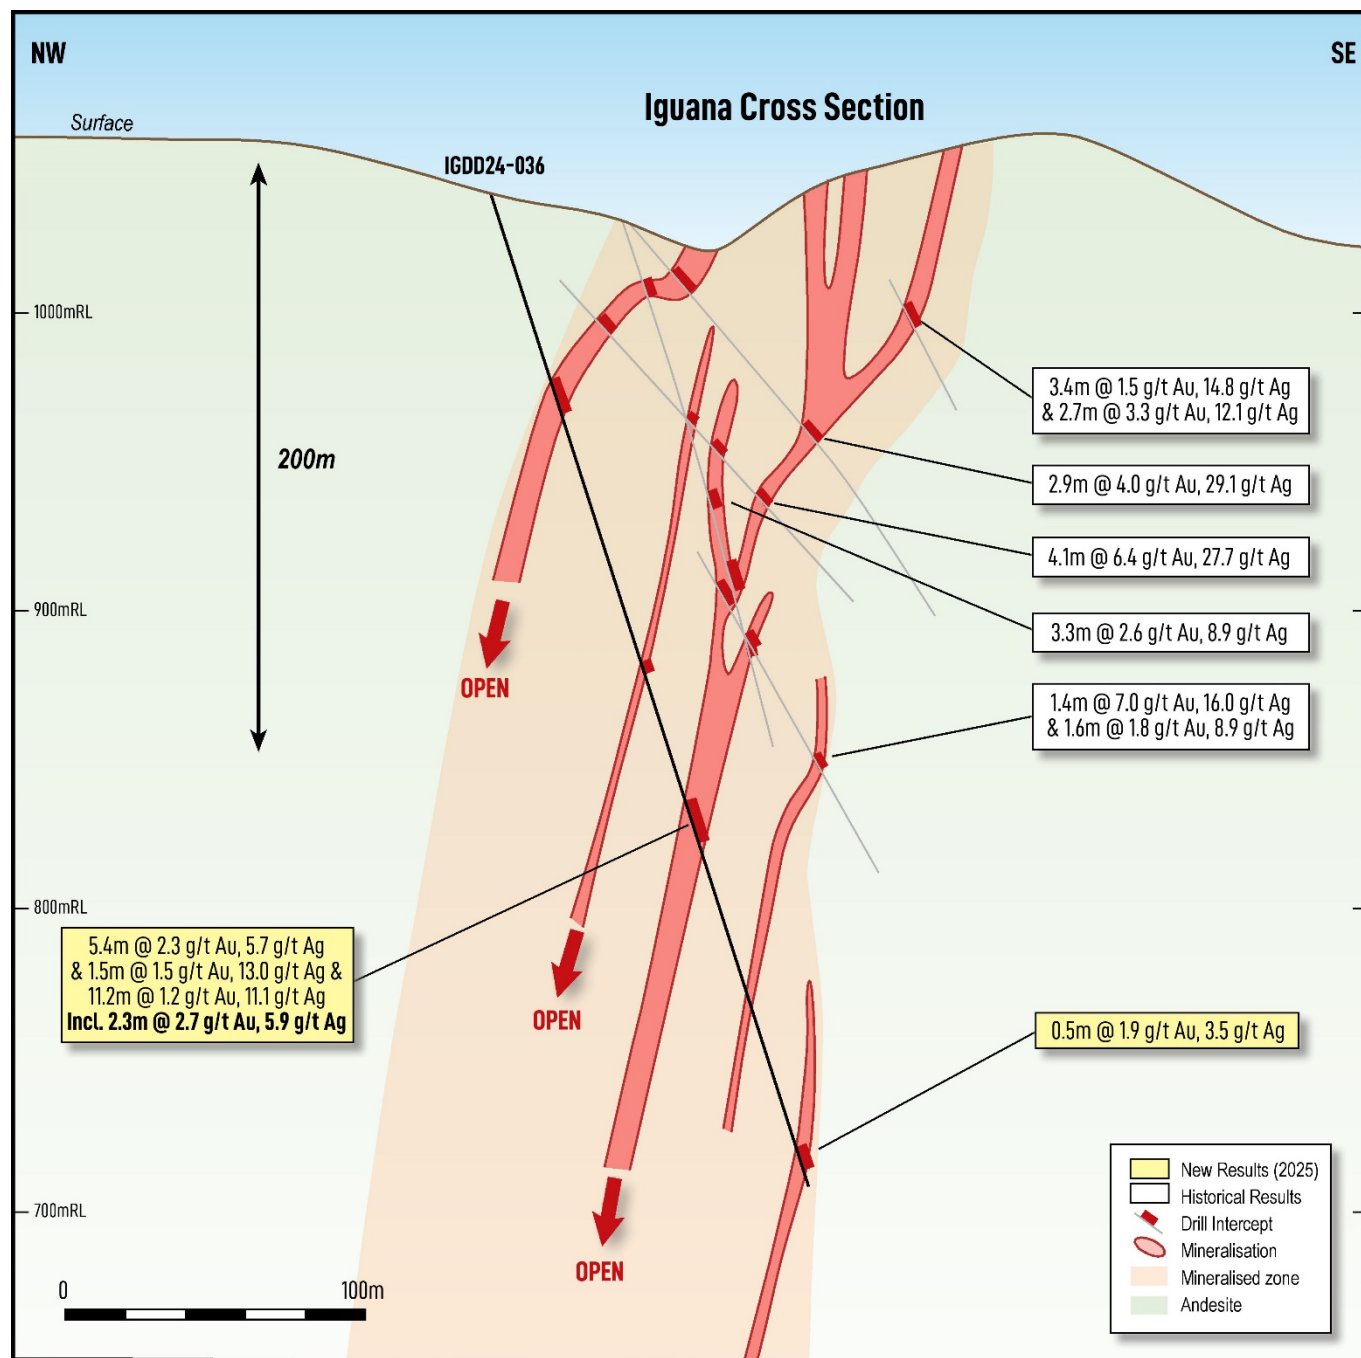

Figure 2. Iguana Cross Section looking northeast, showing geological interpretation, historical and new significant drill intersections. Note new drillhole IGDD24-036 assays returned, extending mineralisation down dip.

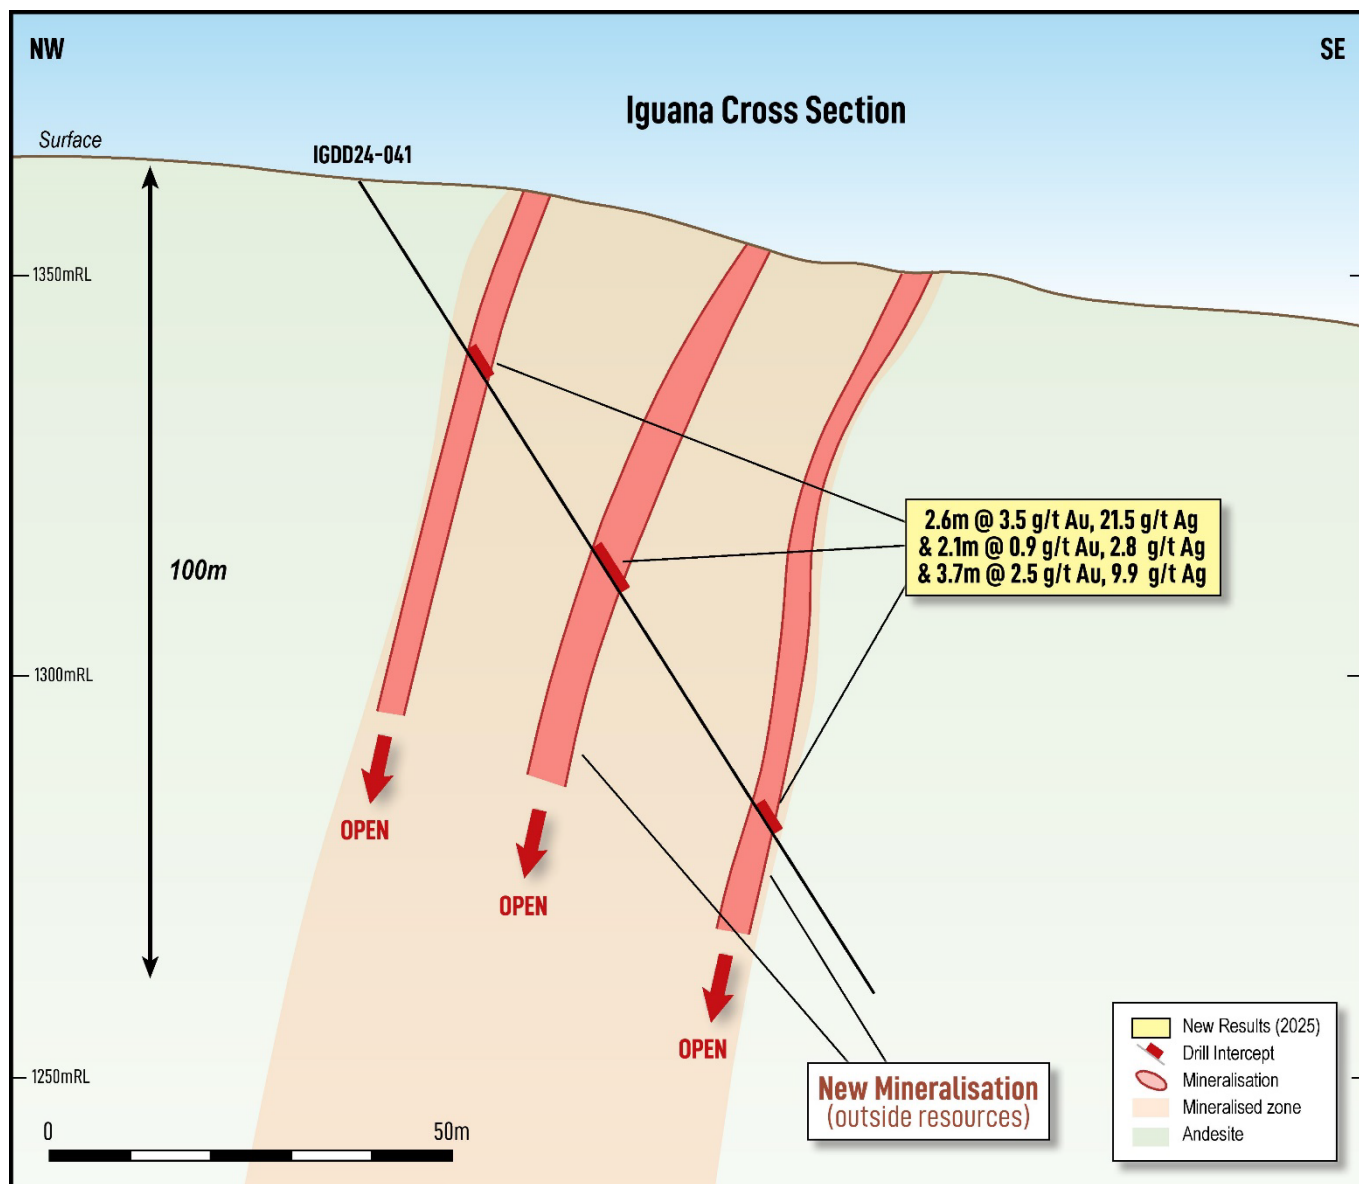

Figure 3. Iguana Cross Section looking northeast, showing geological interpretation, new significant drill intersections. Note new drillhole IGDD24-041 results, confirming and extending mineralisation from surface trenching and identifying two new mineralised veins from shallow depths outside current mineral resources.

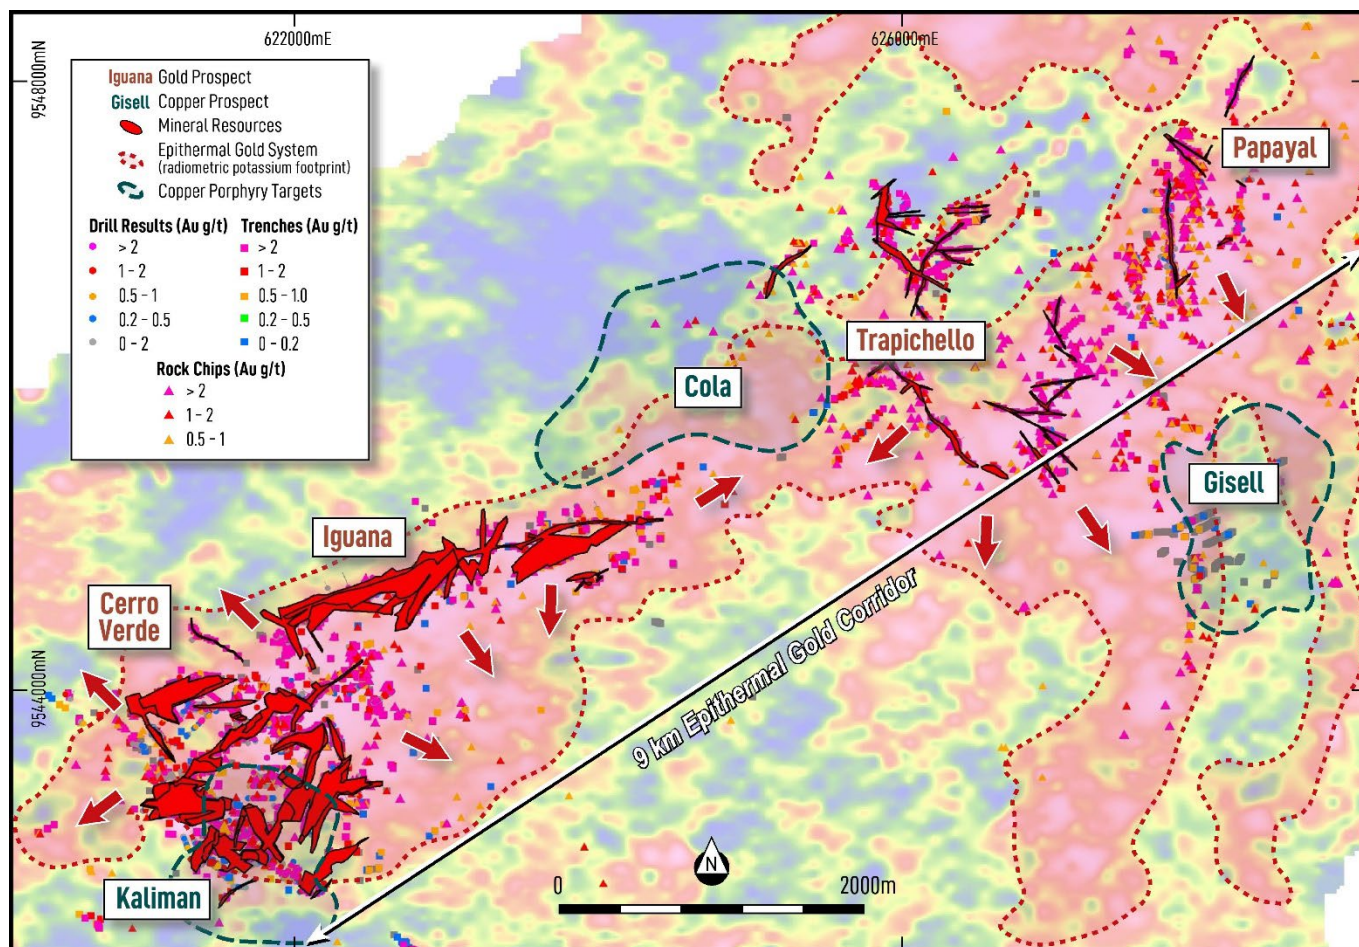

Figure 4. Dynasty Gold Project displaying Mineral Resources, epithermal gold system footprint as highlighted by radiometrics (potassium) and porphyry copper targets in relation to gold targets.

## About the Dynasty Gold Project

The Dynasty Gold Project is an advanced exploration- early resource stage project comprising five contiguous concessions and is 139km<sup>2</sup> in area. Three of these concessions received Environmental Authorisation in 2016 and are fully permitted for all exploration and small-scale mining activities.

Exploration work at the Dynasty Gold Project has outlined an extensive zone of epithermal mineralisation over a nine-kilometre strike extent. There is also considerable potential for porphyry copper mineralisation as identified by surface mapping, trenching and drilling at the Kaliman prospect and by surface geochemistry and mapping at the Cola and Gisell prospects.

## Competent Person's Statements

The information in this report that relates to Exploration Results is based on and fairly represents information compiled by Ms Melanie Leighton, who is an experienced geologist and a Member of The Australian Institute of Geoscientists. Ms Leighton is a full-time employee at Titan Minerals and has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which she is undertaking to qualify as a Competent Person as defined in the JORC 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources, and Ore Reserves'. Ms Leighton consents to their inclusion in the report of the matters based on this information in the form and context in which it appears.

With respect to estimates of Mineral Resources, announced on 6 July 2023, (MRE Announcement) the Company confirms that it is not aware of any new information or data that materially effects the information in the MRE Announcement and that all material assumptions and technical parameters underpinning the estimates continue to apply and have not materially changed.

## Forward-looking Statements

This announcement may contain "forward-looking statements" and "forward-looking information", including statements and forecasts. Often, but not always, forward-looking information can be identified by the use of words such as "plans", "expects", "is expected", "is expecting", "budget", "outlook", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes", or variations (including negative variations) of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might", or "will" be taken, occur or be achieved. Such information is based on assumptions and judgments of Titan's directors and management regarding future events and results.

The purpose of forward-looking information is to provide the audience with information about Titan's expectations and plans. Readers are cautioned that forward-looking information involves known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Titan and/or its subsidiaries to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information. Forward-looking information and statements are based on the reasonable assumptions, estimates, analysis and opinions of Titan directors and management made in light of their experience and their perception of trends, current conditions and expected developments, as well as other factors that Titan directors and management believe to be relevant and reasonable in the circumstances at the date such statements are made, but which may prove to be incorrect. Titan believes that the assumptions and expectations reflected in such forward-looking statements and information are reasonable.

Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which may have been used. Titan does not undertake to update any forward-looking information or statements, except in accordance with applicable securities law.

## Section 2 - Reporting of Exploration Results

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>Titan Minerals Ltd, through its indirect wholly owned Ecuadorian subsidiaries, holds a portfolio of exploration properties in the Loja Province of Ecuador. Amongst these, Titan holds a 100% interest in the Pilo 9, Zar, Zar 1, Zar 3A and Cecilia 1 concessions forming the Dynasty Project and totalling an area of 13,909 hectares.</li> <li>Mineral concessions in Ecuador are subject to government royalty, the amount of which varies from 3% to 4% depending on scale of operations and for large scale operations (&gt;1,000tpd underground or &gt;3,000tpd open pit) is subject to negotiation of a mineral/mining agreement.</li> <li>Pilo 9, Zar and Zar 1 are subject to a 3% royalty payable to the Ecuador Government as part of the Small Scale Mine Licensing regime currently issued in favour of the Dynasty Gold Project but may be subject to change in the event economic studies after exploration indicate a need to apply for a change of regime.</li> <li>Concessions, Zar 3A and Cecilia 1 have not yet completed the environmental permitting process and require the grant of an Environmental Authorisation.</li> <li>Mineral concessions require the holder to (i) pay an annual conservation fee per hectare, (ii) provide an annual environmental update report for the concessions including details of the environmental protection works program to be followed for the following year. These works do not need approval; and (iii) an annual report on the previous year's exploration and production activity. Mineral Concessions are renewable by the Ecuadorian Ministry of Oil, Mining and Energy in accordance with the Mining Law on such terms and conditions as defined in the Mining Law.</li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>Dynasty Gold Project Exploration done by other parties set out in further detail in the Titan ASX release dated 19 May 2020, and summarised below:</li> <li>1977, the Spanish-Ecuadorian joint venture company, Enadimsa, claimed 1,350ha in the La Zanja (Cerro Verde) area for exploration - no results included in reporting.</li> <li>During the 1970s the United Nations explored the "Curiplaya" area, 2 km east of the Dynasty Project. Copper and gold were detected in small quantities, data not included in reporting.</li> <li>1991-92, BHP Exploration Ltd. covered the general area with concessions, but the tenements eventually lapsed after minimal work.</li> <li>2001 to 2003, a private prospecting company, Ecuasaxon, undertook investigations in the general area and discovered anomalous gold and silver in quartz-sulphide veins in what is now the concession area.</li> <li>2003 until 2007 Dynasty Mining and Metals (later Core Gold) completed mapping, limited ground geophysical surveys and exploration sampling activity including 201 drill holes totalling 26,733.5m and 2,033 rock channel samples were taken from 1,161 surface trenches at Cerro Verde, Iguana Este, Trapichillo and Papayal in support of a maiden resource estimation.</li> <li>2008 to 2009, the Ecuadorian Government introduced an exploration moratorium, where on April 18, 2008, Ecuador's Constitutional Assembly passed a Constituent Mandate resolution (the "Mining Mandate"), which provided, among other provisions, for the suspension of mineral exploration activities for 180 days, or until a new Mining Act was approved. The Mining Act was published in late January 2009. The mining regulations to supplement and provide rules which govern the Mining Act were issued in November 2009, after which time the Mining Act and Regulations (collectively, the "Mining Law") were enacted.</li> <li>2017 to 2020 Core Gold Inc. (formerly Dynasty Mining and Metals) commenced small scale mining on a</li> </ul>

		small portion of the Dynasty Project. Operations exposed a number of veins of the Canadian NI 43-101 compliant resource estimate, and operations discovered several veins of varying orientations not previously identified in drill and trench exploration activities requiring further exploration activity to quantify.
<b>Geology</b>	<ul style="list-style-type: none"> <li><i>Deposit type, geological setting, and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>Regionally, the Dynasty gold project lies within the compressional Inter-Andean Graben that is bounded by regional scale faults. The graben is composed of thick Oligocene to Miocene aged volcano- sedimentary sequences that cover the Chaucha, Amotape and Guamote terrains. This structural zone hosts several significant epithermal, porphyry, mesothermal, S-type granitoid, VHMS and ultramafic/ophiolite precious metal and base metal mineral deposits.</li> <li>At the project scale, the intermediate volcanic hosted mineralised veins mainly occur along a faulted zone near and sub-parallel to the contact with the Cretaceous aged Tangula Batholith that extends north from Peru and is found outcropping in the east and south of the concessions.</li> <li>Porphyry intrusion style mineralisation hosting gold and copper mineralisation has also been mapped and intersected by drilling by at the Kaliman porphyry within the Dynasty Project area.</li> <li>Gold occurs in its native form along with sulphides, including pyrite, sphalerite, galena, arsenopyrite, marcasite, chalcopyrite and bornite.</li> </ul>
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li><i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <li><i>easting and northing of the drill hole collar</i></li> <li><i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i></li> <li><i>dip and azimuth of the hole</i></li> <li><i>down hole length and interception depth</i></li> <li><i>hole length.</i></li> </ul> </li> <li><i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></li> </ul>	<ul style="list-style-type: none"> <li>Tabulation of requisite information for all reported drilling results with significant intercepts validated by Titan geologists and referenced in this report are included in Appendix A of this report.</li> <li>Total number of drill holes and trench sites included in this report and located in graphics included in the report.</li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li><i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g., cutting of high grades) and cut-off grades are usually Material and should be stated</i></li> </ul>	<ul style="list-style-type: none"> <li>No high-grade assay cut was applied to reported gold results. In the case of silver, the initial upper detection limit of the four-acid digest used is 100ppm, and an overlimit analysis method with an upper detection limit of 1,500ppm is used.</li> <li>Lower cut-off for reported significant intercepts is nominally 0.5 g/t Au with up to 4m of internal dilution (results with &lt;0.1g/t Au or un-sampled intervals where null values are taken as a zero-gold grade in</li> </ul>

## ASX ANNOUNCEMENT

14 April 2025

Criteria	JORC Code explanation	Commentary
	<p><i>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></p> <ul style="list-style-type: none"> <li><i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></li> </ul>	<p>calculating significant intercepts) are allowed within a reported intercept.</p> <ul style="list-style-type: none"> <li>No metal equivalent reporting is applicable to this announcement</li> </ul>
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li><i>These relationships are particularly important in the reporting of Exploration Results.</i></li> <li><i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i></li> <li><i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g., 'down hole length, true width not known').</i></li> </ul>	<ul style="list-style-type: none"> <li>Reported intersections are measured sample lengths. Reported trench and channel intersections are of unknown true width, further drilling and modelling of results is required to confirm the projected dip(s) of mineralised zones.</li> <li>Reported intercepts are drilled thickness and should not be interpreted as true thickness unless otherwise indicated.</li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li><i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></li> </ul>	<ul style="list-style-type: none"> <li>Included in body of report as deemed appropriate by the competent person</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li><i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.</i></li> </ul>	<ul style="list-style-type: none"> <li>All material exploration results for surface geochemistry are included in the appendices of this report, and location of all results are included in figures provided in their entirety.</li> <li>All results above 0.2g/t Au are included when reporting high grade vein hosted gold mineralisation. No upper cut-off has been applied.</li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li><i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics;</i></li> </ul>	<ul style="list-style-type: none"> <li>No other available datasets are considered relevant to reported exploration results. Historical exploration results include orientation studies for ground magnetics, IP Geophysics, and soil sampling grids, however each of these surveys are limited in scale relative to the project and are not considered material to assess potential of the larger project area.</li> <li>Bulk density tests have been completed on areas related to the reported exploration results.</li> </ul>
