

## Gravity Survey Underway at Woomera Copper-Gold Project

Petratherm Limited (ASX: PTR) is pleased to announce a tenement-wide gravity survey has commenced over the Arcoona tenement (EL 6854) located in the world-class ‘Olympic Copper-Gold Province’ of South Australia. The tenement covers 264 km<sup>2</sup> and is part of PTR’s larger Woomera Copper-Gold Project holdings<sup>1,2</sup>. The district is highly endowed with copper-gold discoveries including OZ Minerals’ newly operating world-class Carrapateena deposit, BHP’s Oak Dam West and Coda Mineral’s Elizabeth Creek and recent Emmie Bluff Deeps discoveries (Figure 1).

Iron-Oxide Copper-Gold (IOCG) style mineralisation is best targeted using gravity surveys as the iron-hosted ores are denser than surrounding rock, producing discrete local gravity highs. PTR believes the tenement has good upside potential as the Arcoona tenement is one of the last areas in the region to be systematically surveyed, and eagerly await results.

In addition to the regional survey work, selective infill gravity surveying will be undertaken over high-priority gravity targets on the neighbouring Woomera tenement (EL 6707) to aid final target modelling and ranking ahead of potential drill testing (Figure 1) <sup>3</sup>. Fast collection of the data is occurring as three gravity crews are operating in parallel, with the survey expected to be completed in about one weeks-time. Any new gravity anomalies located as the survey unfolds will undergo additional infill surveying to get to drill ready status.

In recognition of the highly prospective nature of Petratherm's broader Woomera Copper-Gold Project, the Company has already been awarded an SA Government Accelerated Discovery Initiative grant of \$250,000 to assist in drill testing of IOCG gravity targets currently being developed on the Project<sup>4</sup>. It is anticipated that drill testing will take place during the second half of 2023.

Commenting on the commencement of the gravity surveys, PTR's CEO Peter Reid said:

***"The Company is very excited to be commencing these surveys in a region well known for its world-class copper-gold endowment. The Arcoona tenement is one of the last exploration holdings in this region yet to be systematically gravity surveyed and as a consequence the 264km<sup>2</sup> of prime exploration land has also not been tested by a single exploration drill hole. We await the survey results with great anticipation."***
