

INFILL DRILLING TO COMMENCE AT NEWMINSTER

Barra Resources Limited (ASX: BAR) wishes to advise that drilling will start this week at its Phillips Find Project, 45 kilometers northwest of Coolgardie.

The Company will complete a reverse circulation (RC) drilling program comprising 8 holes (approximately 1,000m) targeting the extension to the main zone of high-grade mineralisation beneath the Newminster pit at the Phillips Find Mining Centre.

The program is designed to extend the main high-grade zone of gold mineralisation (West Lode) between the 6000 and 6045 northings enabling the West Lode to be defined, with higher confidence, over an initial strike length of 100m (from 5960N to 6050N).

Background

The Newminster Deposit forms part of the Phillips Find Mining Centre (PFMC) within Barra's Phillips Find Project. The PFMC comprises three open-pits, Bacchus Gift, Newhaven and Newminster, with combined gold production since 1998 of 32,839 ounces at an average mined grade of 3.3g/t Au. All three deposits have the potential for further development via underground mining with gold mineralisation, which extends beneath each pit, remaining open and minimally tested to date.

The most recent mining activity at the PFMC was the Newminster open-pit which was mined in two stages commencing January 2013 and recently completed in September 2015. A total of 111,082t @ 2.52g/t Au for 9,018oz of gold was produced with mining completed by Blue Tiger Mining Pty Ltd (BTM) pursuant to a Right-to-Mine Agreement which saw Barra receive cash and a royalty on all gold recovered.

With the completion of open-pit mining at Newminster the Company is now focused on developing the underground potential of the PFMC with the aim of developing it into a viable medium to long-term underground mining operation.

Competent Persons Statement

The information in this report which relates to Exploration Results is based on information compiled by Gary Harvey who is a Member of the Australian Institute of Geoscientists and a full-time employee of Barra Resources Ltd. Gary Harvey has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Gary Harvey consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
