## Flight System and Survey Test Flight Successfully Completed

---

- Spookfish flight system and survey test trial successfully completed;
- Key assumptions relating to Spookfish's sensor and its integration with the survey flight control system validated;
- Sensor radiometric accuracy tested in a range of conditions;
- Significant amount of imagery acquired during sensor testing reinforcing full 3D image processing capabilities;
- All data gathered contributes towards planning for full operational trials beginning next month;
- Testing continues to meet the technical objectives set out by Spookfish team.

White Star Resources Limited (ASX: WSR) ("White Star") is pleased to announce that Spookfish Pty Ltd ("Spookfish") has successfully completed a flight system and survey test trial.

The flight system and survey test was conducted to further validate a number of key development assumptions related to Spookfish's "Snapper" sensor and its integration with the Survey Flight Control System. The survey area trial also produced a greater amount of imagery than had recently been acquired during previous sensor testing demonstrating an ever-increasing capability for full-3D image processing. In addition, this testing is being used to further validate sensor radiometric accuracy in a range of conditions.

The success of the trial reaffirmed the autopilot integration methodology for automated flight, a prerequisite for high productivity, high precision surveying, that has been developed by the Spookfish team to facilitate their advanced aerial survey capture and processing system.

The data gained from this trial will contribute towards the Spookfish Technology Demonstrator, which is scheduled to begin full operational trials next month.

The Spookfish Technology Demonstrator will test all aspects of the revolutionary Spookfish Technology including camera systems, data storage, processing, delivery and flight operations which will then be scaled up for the Spookfish commercial offering.

Commenting on the flight system and survey test trials, White Star Executive Director, Jason Marinko, said, "The success of this trial is testament to the research and planning undertaken by the Spookfish technical team and is another important step closer to full operational trials."

### **About Spookfish Pty Ltd**

Spookfish Pty Ltd ("Spookfish") is seeking to redefine the global geospatial industry by aiming to provide the highest quality aerial imagery at significantly improved levels of resolution, accuracy, cost effectiveness and consistency compared to current industry offerings.

White Star acquired a 12.5% interest in Spookfish and has an option to acquire the remaining share capital of Spookfish during the 9 month option period or upon completion of the enhancement and testing of the first phase technology demonstrator.
