Drilling Commences at Flinders IOCG Project, SA

Taruga Minerals Limited (**Taruga** or the **Company**) is pleased to announce that the Aircore drilling program has commenced at Woolshed/Metabase prospects at the Flinders IOCG project. It is expected that drill holes will attain depths of between 50 to 80m which will give a clear indication of potential mineralisation below surface which will be followed up with RC drilling. The first drill fence will cover the historic Woolshed workings which reported highly significant rock chip (up to **18.5% Cu**) and soil results shown in **Figure 1**. All holes will be drilled using Aircore hammer due to drilling in hard rock formation.

In addition to the Aircore drilling, the Company has also commenced auger drilling at the Jenkins prospect to test potential mineral anomalism at depths of 2-3m.

Competent Person's Statement – Exploration Results

The information in this report that relates to exploration results is based on, and fairly represents information and supporting documentation prepared by Mr Mark Gasson, a Competent Person who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Gasson is a Director of Taruga Minerals Limited. Mr Gasson has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resource and Ore Reserves". Mr Gasson consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.
