

ASX ANNOUNCEMENT

28 November 2017

First client signed through new reseller

Key highlights:

- **Recently signed reseller Channon's Refrigeration secures first client for CCP**
- **Introduces the CCP solution to the significant Australian clubs sector**

Further to the ASX announcement on 15 November 2017 announcing Channon's Refrigeration ("Channon's") as a reseller, CCP Technologies Limited (ASX:CT1) ("CCP" or the "Company") is pleased to advise that the first client has been signed through this sales channel partner.

The major Sydney sports club is an existing Channon's client and has decided to proceed with a complete roll-out of the CCP solution across their operations in respect to temperature monitoring and management.

The club will initially install over 110 CCP smart tags to monitor their cool-rooms, freezers and fridges. Additionally, CCP will be used to monitor the on-site brewing facility to ensure the beer is kept cold. The company's enterprise-grade platform and system administration features will support role-based access, alert notifications and reporting functions to align with club requirements.

As a leading provider of commercial cooking and refrigeration equipment to Australia's hospitality industry, Channon's market access is expected to contribute to the growth of the CCP solution in Australia. For CCP, the Australian clubs sector alone presents a total addressable market worth around \$20m in annual subscription revenues.

Michael White, Executive Director and CEO of CCP said,

"Temperature controlled environments are critical to business operations across every sector in the food and hospitality industries. Recent product enhancements highlighted in our shareholder updates have supported this sale. With our enterprise scalability, comprehensive reporting and analytics, task management and edge-computing features, CCP delivers world-leading automated monitoring and management for food safety and related operational optimisation."

“Channon’s first contract validates CCP’s decision to align itself with recognised service providers to the food industry. We are delighted to see another high-profile venue adopt our solution to continuously monitor refrigeration equipment to maintain the safety and integrity of their products and the efficiency of their refrigeration.”

“We are really starting to see some significant market traction with over 50,000 monitoring points in the sales pipeline and on-boarding new channel partners. We are very excited and optimistic about our near-term growth potential.”

About CCP Network

CCP offers a critical control point management system in Australia and North America, and has an emerging presence in Singapore. Critical control points are the points in a supply chain where a failure of standard operating procedure has potential to cause serious harm to people – and to a business’ reputation and bottom line. Standard critical control points include temperature, energy, environment (e.g. air and water quality, pH, chemicals, noise, acoustics and gases) and movement.

CCP captures data using Smart Tags (sensors) and an advanced Internet of Things (IoT) network. Data is delivered to the company’s big data cloud platform where it is analysed to deliver business intelligence. Customers access this information through Web and Mobile Dashboards; and they receive real-time alerts via SMS, email and push notifications.

The Company’s first target market is the food industry, where food safety regulation, energy savings and waste reduction drives adoption. For further information on the CCP Solution, visit: www.ccp-network.com
