## **MAIDEN DRILL PROGRAM COMMENCES AT ANDOVER WEST**

- └ Diamond drill rig mobilised to site**
- └ Initial campaign to test three priority EM nickel sulphide targets underway**
- └ Downhole electromagnetics to aid in planning follow-up drilling**

Errawarra Resources Ltd (ASX:**ERW**) (**Errawarra** or the **Company**) is pleased to provide this update to shareholders on its Andover West project in the West Pilbara region of Western Australia.

### **ANDOVER WEST PROJECT**

As previously discussed in the announcement released 9 December 2022<sup>1</sup>, the Company identified three priority targets, which are the subject of the Andover West maiden drilling campaign.

Figure 1. Diamond drilling at Andover West

<sup>1</sup> Errawarra Resources Ltd, ASX announcement, FLEM Survey Results confirm priority targets 9 December 2022

The current drill programme has been designed to target the previously identified geophysical anomalies at areas A, B and C and represent the best opportunity to intersect massive nickel sulphides.

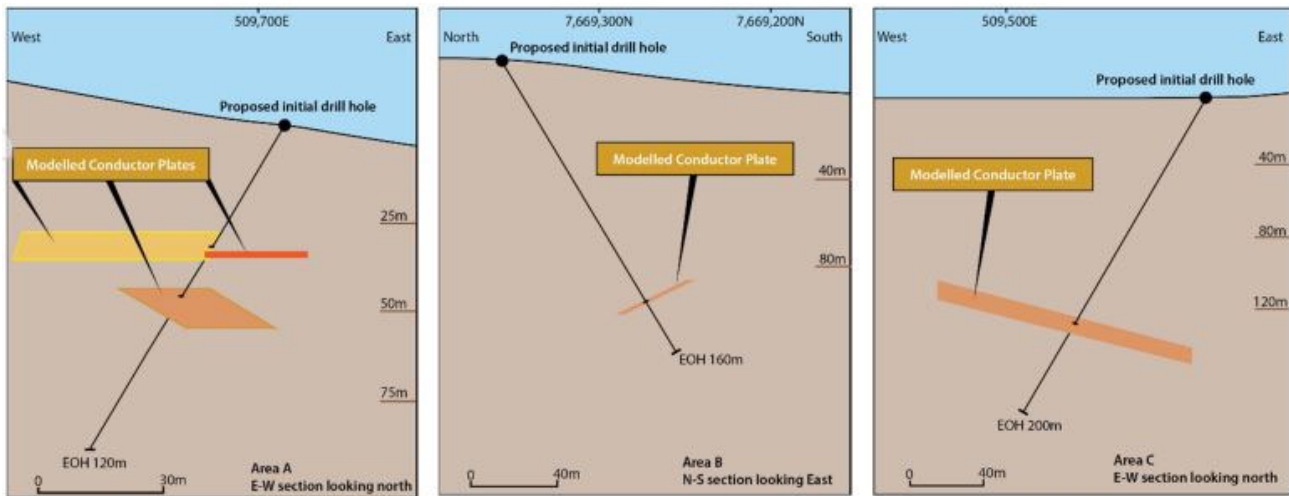

Figure 2. Priority drill hole locations identified by FLEM

A diamond core drill rig was recently mobilised to site and has commenced drilling at the Area B priority target. Modelling of the anomalies suggests that drilling is anticipated to intersect the target above a depth of 200m. Diamond drilling had been selected as the preferred method of testing the anomalies due to the larger sample and more consistent material recovered. This allows for better visual inspection of the sample and identification of potential mineralisation.

On completion of the initial 3 exploratory drill holes down hole electromagnetic (DHEM) surveys will be undertaken to potentially identify conductive zones within the target horizons, which could represent massive sulphides and provide vectoring for additional holes. Any new conductor targets potentially identified will be subject to drill testing in a follow-up drill program.

Although the current focus of exploration at the Company's Andover West tenement is for the discovery of nickel, the overall tenement, which has an area of 100km<sup>2</sup>, is highly prospective for various other commodities, including lithium, and will be the subject of additional exploration activities over the course of 2023.

#### Competent Person Statement

*Thomas Reddicliffe, BSc (Hons), MSc, a Director and Shareholder of the Company, is a Fellow of the AUSIMM, and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Thomas Reddicliffe consents to the inclusion in the report of the information in the form and context in which it appears.*
