

Quarterly Report

for the period ending 31 March 2014

Highlights

- Latest wet screening test work identifies additional hematite mineralization at the Riley DSO Project.
- Venture awaits Judge's decision following completion of the appeal hearing against the Commonwealth's approval of the Riley Project.
- Venture maintains a strong financial position with \$6.3m in cash and a \$15m, undrawn debt facility.

Introduction

The March Quarter saw the completion of the judicial review into the Commonwealth's approval of the Riley Direct Shipping Ore (DSO) Project, the identification of additional hematite mineralisation at Riley and saw the Company continue to position itself for a decision on DSO production.

Following a request by a third party for a judiciary review into the Federal Minister's approval of the Riley DSO Project, a Federal Court hearing was held in mid-February. With the proceedings completed some weeks ago, the Company now awaits the Judge's decision on the validity of the Commonwealth environmental approvals for the Riley Project.

During the quarter the Company has focussed its exploration efforts on identifying additional mineralization adjacent to the Riley resource. Material situated immediately adjacent and below the current resource area was lab tested using a wet screening process consistent with the current Riley plant design. Results were very encouraging suggesting there is scope for increasing the current resource at Riley.

Venture continues to ready itself for a production decision at Riley with all mining, processing and transport contracts remaining in place and a \$15m debt facility secured. Should the Company receive unencumbered approvals, management will be well positioned to make a decision on whether to commence production at Riley. The Company also continues to maintain a cautious approach to expenditure and has a current cash position of \$6.3m.

Riley DSO Hematite Project, North West Tasmania

The 100% owned Riley DSO Project is located 10km from the Mt Lindsay Project (refer to Figure 1) and occurs as a hematite rich pisolitic and cemented laterite. The deposit is all at surface, located less than two kilometres from a sealed road that accesses existing rail and port facilities.

Figure 1 | Location Map for Mt Lindsay Tin-Tungsten Deposit/Riley DSO Deposit/Livingstone DSO Deposit

A maiden resource statement of 2mt @ 57% Fe was defined in 2012 which resulted in the Company doubling its overall DSO resource base, including the Livingstone Deposit, to 4.4mt @ 57% Fe.

Table 1 | Resource Statement – Riley DSO Project

Resource	Tonnes	Fe (%)	Fe (%) Calcined	SiO ₂ (%)	Al ₂ O ₃ (%)	P (%)	S (%)	Cr (%)	LOI (%)
Indicated	2.0mt	57	61	3.7	2.6	0.03	0.08	2.8	7.7

*Refer to ASX announcement on 26 July 2012.

Following completion of the resource Venture engaged independent mining engineers, Rock Team to complete mining studies on the deposit and produce a reserve statement. With all the hematite resources at Riley located at or near surface, the study delivered a 90% conversion rate of resource to reserve.

Table 2 | Reserve Statement – Riley DSO Project

Reserve	Tonnes	Fe (%)	Fe (%) Calcined	SiO ₂ (%)	Al ₂ O ₃ (%)	P (%)	S (%)	Cr (%)	LOI (%)
Probable	1.8mt	57	61	3.7	2.6	0.03	0.07	2.8	7.8

*Refer to ASX announcement on 26 July 2012.

Activities during the March Quarter

The Riley DSO Project continues to be a major focus for the Company in the short term. During the March Quarter the Company's exploration efforts focussed on identifying additional mineralization immediately adjacent to the Riley resource. A test program involving wet screening of material adjacent and beneath the current resource envelope produced favourable results. Venture will assess these latest results and their potential positive impact on the resource at Riley.

Following a request by a third party for a judiciary review into the Federal Minister's approval of the Riley DSO Project, a Federal Court hearing was held during the quarter. The proceedings occurred over three days and were concluded in February with the Company now awaiting the Judge's decision. The Federal appeal follows a State appeal lodged last year against the State environmental approvals for Riley. The State appeal was subsequently dismissed and Venture's approvals were upheld.

Discussions have continued with a number of parties concerning product off-take for the Riley hematite ore. Although negotiations are advanced with several groups, the Company will look to finalise its off-take strategy following a decision to commence production at Riley. With all material contracts remaining in place Venture is well positioned to make a production decision should the Company receive unencumbered approvals for the Riley Project and the broader economic environment is supportive.

Figure 2 | Construction of 8 metre thickener for Riley Mine

Mt Lindsay Project, North West Tasmania

Introduction

The Mt Lindsay Project is located in north-western Tasmania (refer to Figure 1) within the contact metamorphic aureole of the highly perspective Meredith Granite. The project sits between the world class Renison Bell Tin Mine (Metals X Ltd/Yunnan Tin Group > 200,000t of tin metal produced since 1960) and the Savage River Magnetite Mine (operating for > 45 years, currently producing approximately 2 Mtpa of iron pellets). Mt Lindsay has excellent access to existing infrastructure including hydro-power, water, sealed roads, rail and port facilities.

Venture owns 100% of the tenure that hosts both the Mt Lindsay Tin-Tungsten Deposit and all of the surrounding prospects. This quarter Venture withdrew from the Bass Metals Ltd joint venture on EL31/2003 & EL36/2003.

Since commencing exploration on the project in 2007, Venture has completed approximately 83,000m of diamond core drilling at Mt Lindsay and defined a JORC compliant Measured, Indicated and Inferred Resources.

Tin-Tungsten Resources

Table 3 | Tin-Tungsten Resources October 2012

Lower Cut (Tin equiv)	Category	Tonnes	Tin Equiv. Grade	Tin Grade	Tungsten Grade (WO ₃)	Mass Recovery of Magnetic Iron (Fe) Grade	Copper Grade	Contained Tin Metal (tonnes)	Contained Tin/Tungsten Metal (tonnes)
0.20%	Measured	8.1Mt	0.6%	0.2%	0.1%	17%	0.1%	18,000	29,000
	Indicated	17Mt	0.4%	0.2%	0.1%	15%	0.1%	32,000	43,000
	Inferred	20Mt	0.4%	0.2%	0.1%	17%	0.1%	32,000	41,000
	TOTAL	45Mt	0.4%	0.2%	0.1%	17%	0.1%	81,000	113,000
0.45%	Measured	4.3Mt	0.8%	0.3%	0.2%	18%	0.1%	12,000	22,000
	Indicated	5.2Mt	0.7%	0.3%	0.2%	15%	0.1%	14,000	22,000
	Inferred	3.9Mt	0.6%	0.3%	0.1%	9%	0.1%	12,000	17,000
	TOTAL	13Mt	0.7%	0.3%	0.2%	14%	0.1%	38,000	61,000

*Refer to ASX announcement for the Quarterly Report on 17 October 2012.

The resource base at Mt Lindsay is hosted within two magnetite rich skarns (Main Skarn and the No.2 Skarn) which extend over a total strike of 2.8kms and remain open at depth. Additional indicated and inferred resources have been defined at the Reward and Stanley River South Prospects, which extend over an additional 1.1km of strike.

In 2012 the resource base at Mt Lindsay was the subject of a Bankable Feasibility Study (“BFS”) which concluded that the project was robust in terms of margin per tonne and internal rate of return. The study entertained a 1.75million tonne per annum operation, producing concentrates of tin, tungsten, copper and magnetite. The reserve statement included in the BFS is as follows.

Table 4 | Reserve Statement November 2012

Category	Tonnes	Tin Equiv. Grade	Tin Grade	Tungsten Grade (WO ₃)	Mass Recovery of Magnetic Iron (Fe) Grade	Copper Grade	Contained Tin Metal (tonnes)	Contained Tin/Tungsten Metal (tonnes)
Proved	6.4Mt	0.7%	0.2%	0.2%	18%	0.1%	14,000	23,000
Probable	7.3Mt	0.5%	0.2%	0.1%	13%	0.1%	16,000	23,000
TOTAL	14Mt	0.6%	0.2%	0.1%	15%	0.1%	30,000	46,000

*Refer to ASX announcement on 7 November 2012.

Additional highlights of the Bankable Feasibility Study included:

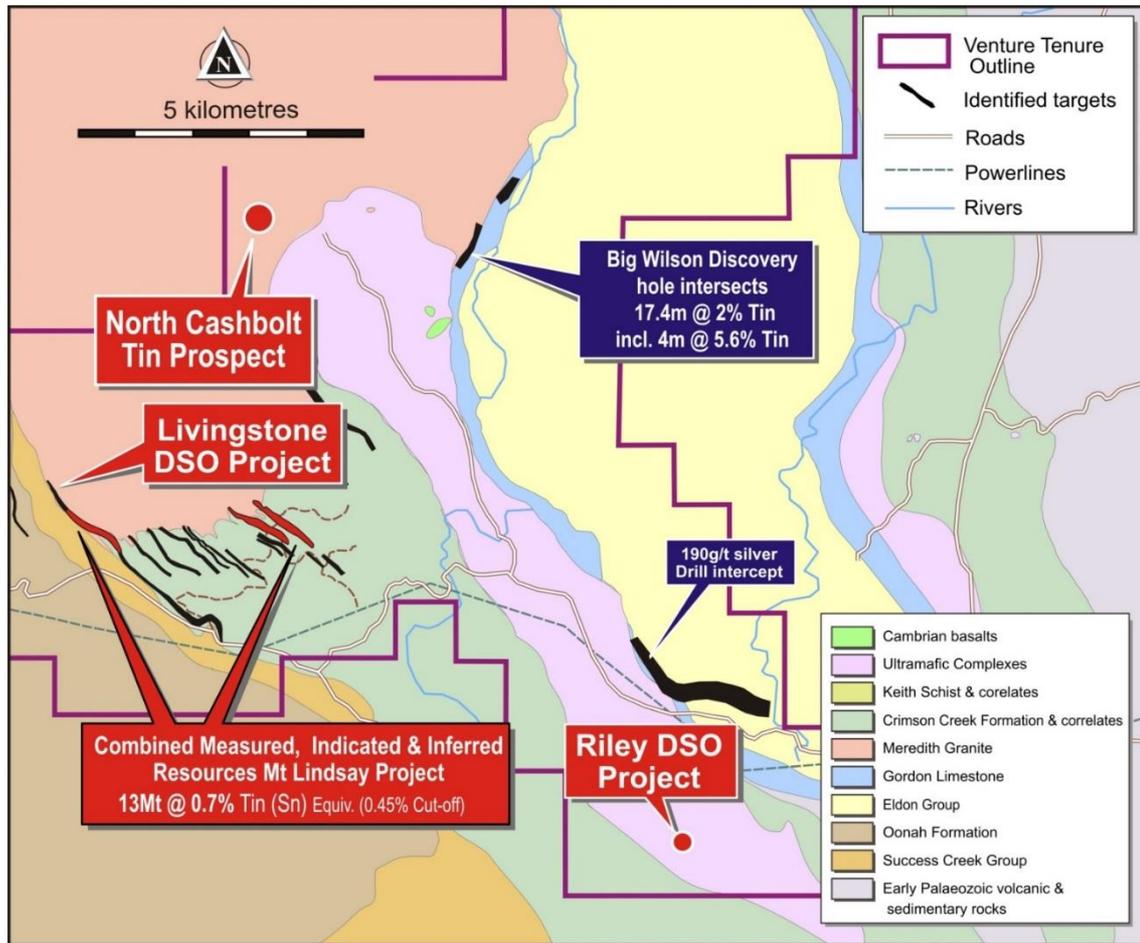

- 14mt Maiden Reserve including proved reserves of 6.4mt @ 0.7% tin equivalent
- Project generates in excess of \$550 million in net revenue (pre tax)
- Net annual revenue peaks at over \$110 million (pre tax)
- Long mine life of 9 years
- Return on Equity: 33%
(60%debt/40%equity)
- Payback period of 4 years
- Capital Cost of \$198 million including a 35% plant capacity upgrade to 1.75mtpa.
- Project NPV:

NPV discount rate	A\$
8.0%	\$143m
9.0%	\$128m
10.0%	\$113m

Commodity Prices & Exchange Rate used for BFS	
Tin	US\$23,800/t
Tungsten	US\$392/mtu
Magnetite (reference price Fe 62%)	US\$125/t
Copper	US\$8,000/t
Exchange Rate	USD/AUD = \$0.90

Full details of the Mt Lindsay BFS and a list of assumptions please refer to ASX announcement of 7 November 2012.

Figure 3 | Mt Lindsay Project - Location of Resources and Exploration Targets

Activities during the March Quarter

Following completion of the BFS in November 2012, the Company is continuing to finalise application documents to commence the process of obtaining the State and Commonwealth approvals necessary for the Project.

Independent environmental consultants, Pitt & Sherry, continue to assist Venture with all environmental and permitting aspects of the Mt Lindsay Project development. The Company continues to work on the preparation of the final DPEMP.

Exploration

Mt Lindsay has extensive exploration potential both through the extension of existing mineralized systems as well as the numerous targets surrounding the current resources. Skarn targets drill tested to date represent approximately 10% of the total skarns identified by the Company, with an additional 32 strike kilometres of interpreted magnetite skarns still remaining untested within the project area.

Exploration activity during the quarter continued to focus on assessing the potential of several targets in the immediate vicinity of the Mt Lindsay resource base (refer to Figure 2). The focus for exploration is to define targets capable of delivering high grade mineralization with the potential to extend future mine life at the Mt Lindsay Project.

Livingstone DSO Hematite Project, North West Tasmania

Located only 3.5km from the Company's flagship Mt Lindsay Tin-Tungsten Deposit is the 100% owned Livingstone DSO Hematite Deposit. Livingstone consists of an outcropping hematite cap overlaying a magnetite rich skarn. The hematite occurs from surface, is consistent in grade and located only 2km from a sealed road which accesses existing rail and port facilities.

A maiden resource statement of 2.2mt @ 58% Fe was defined at Livingstone in 2011, which was followed by a positive and robust scoping study. Additional work later in 2011 included blending and sizing testwork and preliminary mining studies, all of which delivered positive results.

During the second half of 2012 the Company completed a resource upgrade, which resulted in 100% of the inferred resources being converted to the indicated category.

Table 5 | Resource Statement Livingstone DSO Project

Resource	Tonnes	Fe (%)	Fe (%) Calcined	SiO ₂ (%)	Al ₂ O ₃ (%)	P (%)	S (%)	LOI (%)
Indicated	2.4mt	57	61	5.4	1.9	0.07	0.05	7.0

*Refer to ASX announcement on 26 July 2012.

Immediately following the resource upgrade Venture engaged independent mining engineers, Rock Team to complete mining studies on the deposit and produce a reserve statement. With the hematite resources at Livingstone consistent in nature and outcropping at surface the study delivered a 90% conversion rate of resource to reserve.

Table 6 | Reserve Statement – Livingstone DSO Project

Reserve	Tonnes	Fe (%)	Fe (%) Calcined	SiO ₂ (%)	Al ₂ O ₃ (%)	P (%)	S (%)	LOI (%)
Probable	2.2mt	57	62	5.3	1.9	0.08	0.03	7.1

*Refer to ASX announcement on 26 July 2012.

Activities during the March Quarter

With the completion of all the technical work at Livingstone, the Company's focus during the March Quarter continued to be on preparing and scheduling the approval process. In addition to the approvals Venture also continues to advance discussions around key contracts.

South East Asia Initiative

Venture continues to progress its strategy of targeting South East Asia for exploration opportunities. Venture has identified an extensive belt of "skarn style" mineralisation throughout the region specifically targeting strategic metals such as tin and tungsten as well as other base and precious metals.

The Company has established a low cost regional office in the region and will look to continue to build a cost effective portfolio of exploration projects over the medium term.

During the March Quarter the Company expanded its tenement applications over several high priority targets and continued to advance existing applications over targets identified in 2012. Following security of tenure the Company will look to commence work on its priority targets.

Paulsens South Project, Western Australia

(Venture Minerals has 100%, reducing to 30%)

The Paulsens South Project (covering 59km²) flanks and covers a similar stratigraphic and structural setting to Northern Star Resources Limited's +1Moz high grade Paulsens Gold Mine, (Measured, Indicated and Inferred Resources as of 30 June 2013 of 2.908Mt at 5.6g/t for 532koz Au, plus production of over 460,000ozs up to the end of 2011 and is currently producing ~100,000ozs gold per annum) in the Ashburton Mineral Field of Western Australia.

Joint venture partner Rumble Resources Limited ("Rumble") has satisfied the initial joint venture commitment as part of the requirements to earn at least 70% of the project.

There was no field activity during the quarter.

Harris Bluff Project, South Australia

(Venture Minerals has 51% whilst earning up to 90%, except for the uranium rights)

The Harris Bluff Project (167km²) is situated within the south-eastern part of the Gawler Craton, an area considered prospective for Pb-Zn and epithermal Au-Ag mineralisation. Very sparse historic drilling in the immediate vicinity of the Project returned up to 180 ppb Au and 6 g/t Ag.

Mega Hindmarsh Pty Ltd ("Mega") a subsidiary of Toronto listed Mega Uranium Limited has earned 51% interest in the uranium rights of the project (EL4788), but is now a non-contributing party to the uranium joint venture.

There was no field activity during the quarter.

Detailed information on all aspects of Venture Minerals' projects can be found on the Company's website www.ventureminerals.com.au.

Yours faithfully

Hamish Halliday
Managing Director

The information in this announcement that relates to Exploration Results, Mineral Resources or Ore Reserves was prepared and first disclosed under the JORC Code 2004. It has not been updated since to comply with JORC Code 2012 on the basis that the information has not changed since it was last reported.

The information in this report that relates to Exploration Results, Exploration Targets or Mineral Resources is based on information compiled by Mr Andrew Radonjic, who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Andrew Radonjic is a full-time employee of the company. Mr Andrew Radonjic has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Andrew Radonjic consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Ore Reserves is based on information compiled by Mr Denis Grubic, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Grubic is an independent consultant employed by Rock Team Pty Ltd. Mr Grubic qualifies as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Grubic consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
