Extensional Resource Drilling Underway at the Buccaneer Western Zone

ABM Resources NL ("ABM" or "The Company") is pleased to announce that, following the extended wet-season in the Northern Territory, drilling has commenced at the Buccaneer Western Zone over Easter.

Buccaneer Western Zone Drilling at Twin Bonanza Gold Camp:

- First hole already completed to 331 metres, second hole underway currently at 248 metres down hole depth. Drill samples being consigned to the laboratory.
- Higher grade Western Zone Target volume is 300-600m long by 50-100m wide by 400m down-dip (from near surface) and has potential to add significantly to ABM's 1.67million ounce gold resource at Buccaneer.
- 2010 results from the higher grade Buccaneer Western Zone included:
 - 81m grading 2.03g/t gold including:
 - 7m grading 12.96g/t gold.
 - 67m grading 2.07g/t gold ending in mineralisation including:
 - 12m grading 8.22g/t gold.

Other work programs at Twin Bonanza:

- Preparation for bulk trenching program at the Old Pirate High Grade Gold Prospect where ABM's 2010 exploration covered:
 - Mapping and sampling of a complex mineralised vein swarm over an area 600m by 250m with rock chips in excess of 2000g/t gold.
 - Drill results including:
 - 43m grading 7.0g/t gold.

- 5m grading 274g/t gold.
- Further reconnaissance and targeting ahead of drilling at other highly ranked gold targets at the Twin Bonanza Gold Camp including:
 - Corsair – 3.5km by 1.2km gold anomaly defined by shallow drilling.
 - Vampire – 0.85km by 0.5km gold anomaly in shallow drilling and surface sampling with grades up to 83g/t gold.
 - Landlubber – a 2.4km by 0.57km arsenic (a pathfinder element to gold) surface anomaly.
 - McFarlanes – a 1.3km by 1.1km gold anomaly in shallow drilling associated with a porphyry inferred to be analogous to the Buccaneer Porphyry.
 - Port-Starboard trend – a 13km multi-prospect zone anomalous in gold-arsenic-antimony and copper.
 - The Treasure Dome – a newly identified large scale (6km by 6km) complexly folded, faulted and domed sequence of iron rich sediments and intrusions with no previous sampling and potentially geologically analogous to Newmont's multi-million ounce nearby Callie Mine.

Refer previous releases (04/04/11, 21/02/11, 03/02/11, 31/01/11, 13/01/11, 13/12/10, 15/11/10, 18/10/10, 22/09/10, 13/09/10, 31/08/10, 19/08/10, 27/07/10, 12/07/10 and 07/07/10) for full details of resource estimation, drill results, target identification.

Darren Holden, Managing Director of ABM Resources said, "It has been only a year since ABM began to unlock the potential of its extensive tenement holdings in the Tanami-Arunta region of the Northern Territory. We have already achieved a maiden resource at Buccaneer that is open in several directions, drilled and surface-sampled very high gold grades at the Old Pirate Prospect and identified numerous drill targets at the Twin Bonanza Gold Camp. It is great to see the first rig arrive and commence drilling for 2011 after an extended wet season. This year we are commencing drilling from a stronger corporate and financial base, and are developing a growing understanding of controls on mineralisation. The Buccaneer Western Zone was only identified after the last hole of the 2010 season and has the potential to add both, ounces and grade, to our existing resource estimations."

2011 Exploration Programs at Twin Bonanza

The Twin Bonanza Gold Camp spans an area 40km by 40km and has over 30 targets identified to date. The Buccaneer Porphyry Gold Deposit, with an existing resource of 1.67Moz of gold, and the newly recognized higher grade Western Zone provide the first drill targets for 2011. ABM has contracted Top Drill Ltd of Kalgoorlie, Western Australia for the entire year with planned deep (up to 500m) Reverse Circulation (RC) drilling. A diamond core drill from Boart Longyear is scheduled to arrive on the property in mid May.

ABM is sourcing a third rig for regional work to cover targets such as the Kroda Gold Project and the Lake Mackay Iron Oxide Copper-Gold targets with work scheduled to commence in mid to late May.

About the Twin Bonanza Gold Camp

The Twin Bonanza Gold Camp is centered approximately 22 kilometres south of the Tanami Road and 14 kilometres east of the Western Australia – Northern Territory border. The Project spans the highly prospective “Trans Tanami Structure” an inferred regional / tectonic geological feature which hosts numerous gold deposits including Newmont’s multi-million ounce Callie Gold Mine. In 2010 ABM focused its effort at Twin Bonanza on the Old Pirate Prospect – a 3 kilometre anomaly with multiple high-grade zones in quartz veins hosted in sedimentary rocks and the Buccaneer Porphyry Gold Deposit – an intrusive related bulk tonnage gold target. In 2011 ABM is focusing its effort at the Buccaneer Porphyry Western Zone, Old Pirate (trenching, bulk sampling and drilling) and intends to test up to 10 of the regional targets in the wider Twin Bonanza Gold Camp.

About ABM Resources

ABM is a mineral exploration company focused on gold discovery in the Tanami-Arunta regions of the Northern Territory, Australia. The Company is one of the largest exploration license / license application holders in Australia. The Company has an aggressive exploration approach and is well funded for multiple target testing with multiple rigs in 2011.

Competent Persons Statement

Information in this document has been reviewed and validated by Mr Darren Holden who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Holden is a full time employee of ABM Resources NL and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves". Mr Holden consents to the inclusion in the documents of the matters based on this information in the form and context in which it appears.
