

COMPANY ANNOUNCEMENT

28th February, 2011

OHAI PILOT UPDATE

L&M Energy Limited (LME) is pleased to provide the following update on drilling progress at the Ohai pilot project.

OM#5 has been completed and the rig re-located to the first of two lateral well locations, OM#7. OM#7 has reached a vertical depth of 244m which is the proposed kick off point for the radius build section of the well. 7 inch diameter production casing is currently being installed before the directional section of the drilling programme commences.

The two horizontal lateral wells will then be drilled to intersect OM#5 using proven directional drilling methods. Each of the lateral wells will pass through approximately 700m of coal with the gas they produce to be extracted from OM#5.

The pilot project follows on from the company's 3P reserves upgrade to 274 PJ and forms a key part of the Company's 2P gas reserves campaign which is aimed at independently certifying New Zealand's first tranche of 2P CSG reserves.
