

## ASX release

### **Significant orders received for Ludowici's Reflux Classifier accelerates the establishment of this technology as a preferred global coal processing technology**

Brisbane, 22 December 2011: Ludowici Limited (ASX: LDW) is pleased to announce that its revolutionary patented Reflux Classifier separation technology continues to receive international endorsement following the receipt of two significant sales orders and promising results for the Company's next generation technology currently in field testing.

Ludowici recently received its two largest orders for its Reflux Classifiers, with an order for 6 units from the United States and a further order for 8 units for a new coal preparation plant in Australia. In addition to these orders, there are a number of active Reflux Classifier projects globally for both coal and hard rock applications that the Company is hopeful of receiving orders for during 2012.

Ludowici is also continuing to invest in research and development activities to build the market leading position for its Reflux Classifier technology. Fifteen Reflux Classifier trial units are currently in operation in Australia, India, Africa, the United States, Canada and China. These field tests are showing promising results across a breadth of applications including coal, iron ore, mineral sands, chromium, zinc and manganese, and are exceeding the Company's and customer expectations.

Ludowici's Managing Director, Patrick Largier, said that the growing global order book for the Company's Reflux Classifier technology reflected Ludowici's ongoing commitment to research and development that has led to its new Reflux Classifier technology being more efficient and compact than competing fine coal and mineral cleaning equipment globally.

"Ludowici's patented Reflux Classifier separation technology continues to establish itself as the preferred technology globally for coal and mineral processing. The Company's commitment to research and development is seeing older less efficient technologies being replaced by Ludowici's market leading technologies. The growing order book for the Reflux Classifier, combined with promising field results for our next generation technology, puts Ludowici in a strong market position in this segment of the mineral processing industry globally," said Mr Largier.

#### **About Ludowici Limited:**

Ludowici Limited (ASX: LDW) is proud of its 150+ year record of innovation in engineering and design. Having been established in 1858, Ludowici's activities today revolve around the global mining industry – designing, manufacturing and marketing mineral processing equipment. The Company's products and services include vibrating screens, reflux classifiers, coal centrifuges, an extensive range of wear resistant products, and a variety of other products and services.

Ludowici has a proven commitment to research and development to ensure its clients continue to benefit from the latest advancements in engineering design and technology. The Company's diverse range of products and services is testimony to its reputation for innovation. Headquartered in Brisbane, Australia, Ludowici has 21 offices globally across Australia, Latin America, China, India, South Africa and the United States.
