

## ACTIVITIES REPORT FOR THE QUARTER ENDED 30 June 2011

## HIGHLIGHTS

### MARENICA URANIUM PROJECT, NAMIBIA

(Marenica Energy – 75%)

- Several NE-trending **high-grade zones of uranium mineralisation** identified from in-fill drilling in the East Pit area, within a **continuous +50ppm eU<sub>3</sub>O<sub>8</sub> grade envelope**.
- **86% of holes** from the East Pit program return **significant intercepts of >100ppm eU<sub>3</sub>O<sub>8</sub>** with highlights including:
  - **19.4m@ 193ppm eU<sub>3</sub>O<sub>8</sub> from 13.6m in MAR1725**
  - **10.7m@ 161ppm eU<sub>3</sub>O<sub>8</sub> from 19.3m in MAR1729**
  - **13.3m@ 195ppm eU<sub>3</sub>O<sub>8</sub> from 12.0m in MAR1734**
  - **13.1m @ 166ppm eU<sub>3</sub>O<sub>8</sub> from 17.5m in MAR1740**
  - **10.9m @ 259ppm eU<sub>3</sub>O<sub>8</sub> from 25.6m in MAR1744**
  - **13.6m@ 201ppm eU<sub>3</sub>O<sub>8</sub> from 17.3m in MAR1775**
  - **8.4m @ 346ppm eU<sub>3</sub>O<sub>8</sub> from 24.7m in MAR1808**
  - **8.7m @ 352ppm eU<sub>3</sub>O<sub>8</sub> from 28.0m in MAR1823**
  - **8.0m @ 352ppm eU<sub>3</sub>O<sub>8</sub> from 33.6m in MAR1825**
  - **12.7m@ 572ppm eU<sub>3</sub>O<sub>8</sub> from 28.4m in MAR1826**
  - **16.8m@ 498ppm eU<sub>3</sub>O<sub>8</sub> from 27.0m in MAR1853**
  - **8.0m @ 547ppm eU<sub>3</sub>O<sub>8</sub> from 16.2m in MAR1867**
  - **7.7m @ 569ppm eU<sub>3</sub>O<sub>8</sub> from 23.8m in MAR1876**
  - **16.4m@ 472ppm eU<sub>3</sub>O<sub>8</sub> from 11.4m in MAR1889**
  - **4.0m @ 1,169ppm eU<sub>3</sub>O<sub>8</sub> from 29.2m in MAR1889**
- **Channel-hosted uranium mineralisation in two zones over 2km long** outlined at the **MA7 target**. The zones remain open to the north.

## OVERVIEW

During the Quarter, development plans for the Company's 75%-owned **Marenica Uranium ("Project")**, located in Namibia, Southern Africa were progressed.

A program of Reverse Circulation (RC) drilling was completed during the Quarter aimed at improving both the tonnage and U<sub>3</sub>O<sub>8</sub> grade within the optimized pit shell, produced in 2010. The drilling delineated several discrete high-grade zones, with 86% of the holes returning **significant intercepts of >100ppm eU<sub>3</sub>O<sub>8</sub>**.

Metallurgical test-work is continuing at AMMTEC laboratories in Australia to assess the heap-leach process route and the amenability of the ore to a range of beneficiation, blending and agglomeration options. Results from the agglomeration work to date indicate that, while the upgraded material agglomerates well, there will be a requirement for the addition of a polymer product to assist this process.

Environmental and hydrological baseline studies also continued during the June Quarter as part of the Pre-Feasibility baseline assessment that will contribute to a comprehensive Environmental Impact Assessment ("EIA") as part of a future Definitive Feasibility Study ("DFS").

The Company has engaged consultants Hydromet Pty Ltd, MH Consulting, IMO and Elemental Engineering to complete a review of all previous metallurgical work for the Marenica Project. This report will be due in late September 2011.

Optiro Pty Ltd has also been engaged to complete an economic review of the Project.

# MARENICA URANIUM PROJECT, NAMIBIA (*Marenica Energy – 75%*)

## Metallurgical Test-work

Agglomeration test results on both bedrock and channel ore indicate that the -3.35mm material is dominated by fines and would require up to 600g/t of polymer to achieve a 2-3 rating on agglomeration (1 being ideal). The percolation rates for the agglomerate with polymer were satisfactory.

Column leach test work for both bedrock and channel ore is underway, with full results expected in September.

## East Pit Reverse Circulation Drilling

Reverse Circulation (RC) drilling was completed in the East Pit zone during the Quarter with a total of **205 holes drilled for 11,201m**.

Uranium mineralisation outlined in the East Pit target area (within the optimised pit shell from the SRK Scoping Study) is concentrated into two main NE-trending zones, broadly separated by a palaeo-ridge feature.

The drilling program was designed to focus on the western side of this zone (see *Figure 1*). Drilling was designed to in-fill the grid pattern to a 100m by 100m spacing in an area of the resource that was previously drilled on a wide-spaced grid (300m by 200m).

The drilling has confirmed the continuity of the +50ppm ore envelope in the eastern part of the resource area (JORC compliant Mineral Resource Estimate of 648 million tonnes at 97ppm for 138Mlbs U<sub>3</sub>O<sub>8</sub> (at a 50ppm LCOG)). Within this area, a number of north-east trending high-grade zones were also identified, some of which remain open to the north and south (see *Figure 2*). Continued definition of these high-grade zones will lead to further improvements to the geological and resource model.

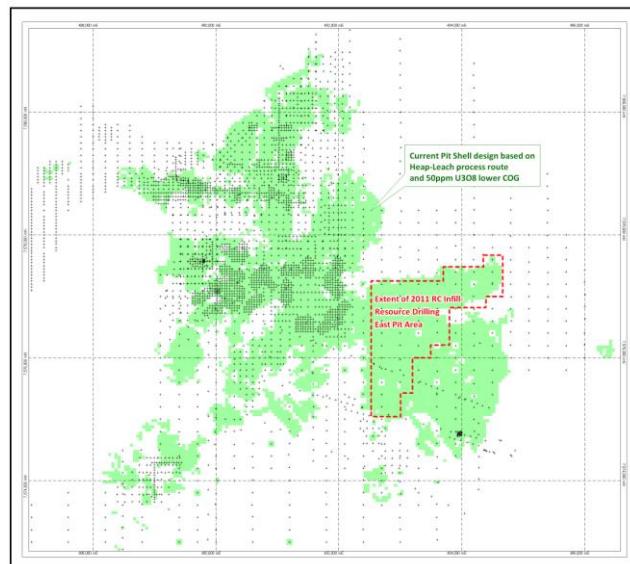

Fig 1: Marenica Project – 2010 optimised pit shell and location of new drilling

A total of 176 holes (86%) reported intersections >100ppm eU<sub>3</sub>O<sub>8</sub> within a broad, continuous 50ppm grade envelope.

Mineralised zones were intersected from surface to depths of up to 50m, with most significant intercepts occurring between 15m and 25m below surface.

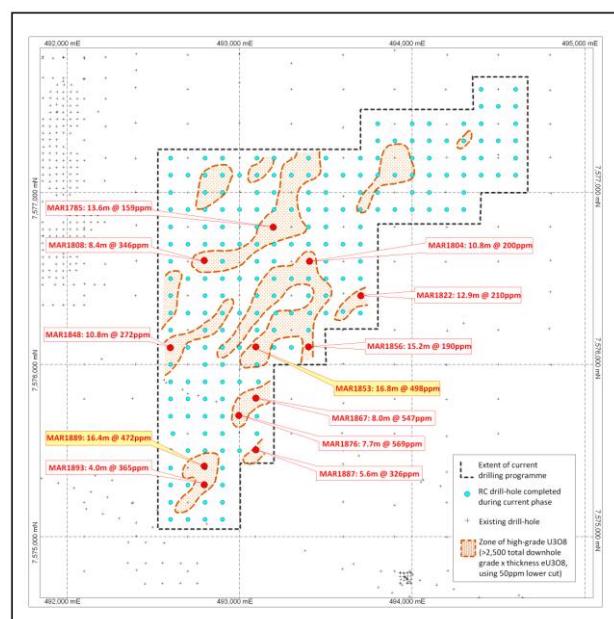

Fig 2: Marenica Project – location of high grade zones within the East Pit Area

Better results from this drilling included (see table in Appendix 1 for all results >100ppm eU<sub>3</sub>O<sub>8</sub>):

- **12.7m @ 572ppm eU<sub>3</sub>O<sub>8</sub> from 28.4m in MAR1826;**
- **16.8m @ 498ppm eU<sub>3</sub>O<sub>8</sub> from 27.0m in MAR1853; and**
- **16.4m @ 472ppm eU<sub>3</sub>O<sub>8</sub> from 11.4m in MAR1889.**

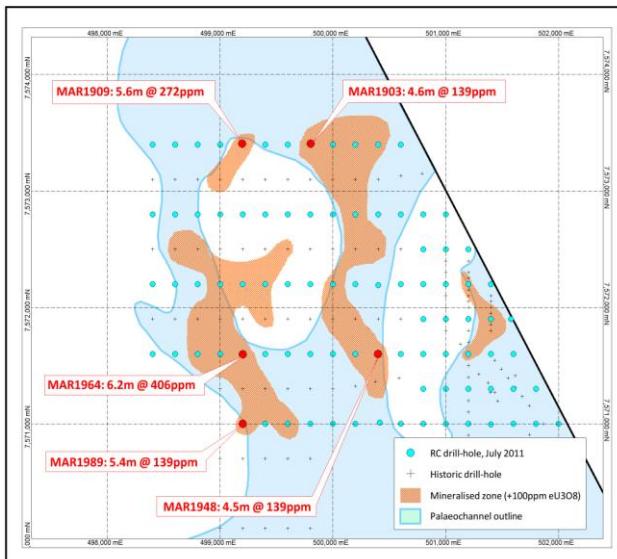

## Target Area MA7

Drilling at exploration target MA7 was completed with a total of **88 holes drilled for 2,525m**. The Reverse Circulation drilling was completed over an area previously drilled at 600m line spacings, which has now been in-filled to 300m by 200m.

The overall tenor of the mineralisation is low grade, with better results including (see table in Appendix 1 for all results >100ppm eU<sub>3</sub>O<sub>8</sub>):

- **6.2m @ 406ppm eU<sub>3</sub>O<sub>8</sub> from 30.1m in MAR1964; and**
- **5.6m @ 272ppm eU<sub>3</sub>O<sub>8</sub> from 11.2m in MAR1909.**

The mineralisation remains open to the north. Several drill traverses are planned to test this northern extension

>100ppm eU<sub>3</sub>O<sub>8</sub>*

## Scoping Review

Marenica Energy has engaged consultants Optiro Pty Ltd to complete an economic review of all the previous scoping work for the Marenica Uranium Project. This report is due in late September.

Included in this will be an up-to-date review of all metallurgical work completed to date. This is being completed by independent metallurgical consultants, Hydromet Pty Ltd, MH Consulting, each of whom are focusing on process flow sheet design. The main objective is to identify efficiencies via beneficiation and simplification of the process flow sheet. IMO and Elemental Engineering have been asked to assist in process modeling and cost estimates for OPEX and CAPEX.

## CORPORATE

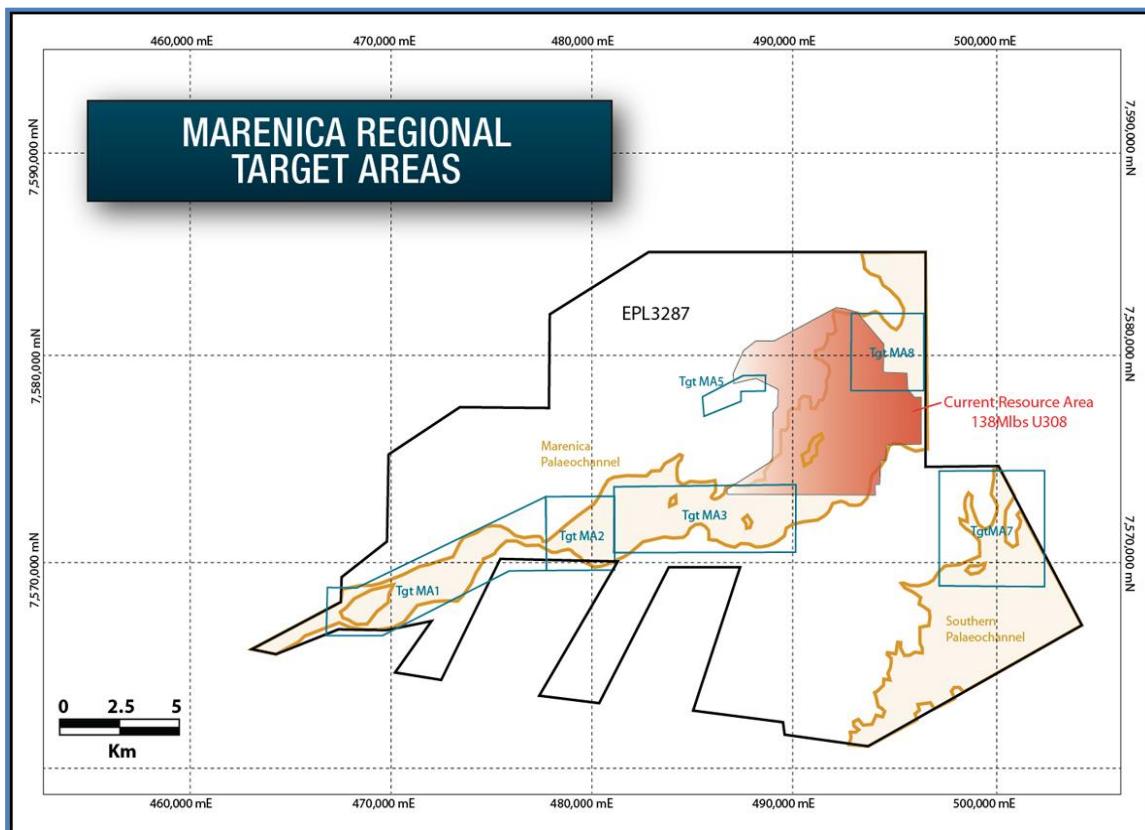

The Company continues to evaluate complementary opportunities in uranium and other mineral commodities both within and outside of Africa

## ENDS

## Marenica Uranium Project, showing location of Regional Target Areas

### Notes

Information in this report that relates to exploration results is based on information compiled by Dr Erik van Noort, who is a Member of the Australian Institute of Geoscientists. Dr van Noort is a full-time employee of Marenica Energy Ltd and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr van Noort consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Where eU3O8 is reported it relates to values attained from radiometrically logged boreholes. The probe has been calibrated at the Pelindaba Calibration facility in South Africa. Down-hole spectral gamma logging/probing of drill holes provides a powerful tool for uranium companies to explore for, and evaluate uranium deposits. Such a method measures the natural gamma rays emitted from material surrounding a drill hole out to around 0.5 metre from its centre - the gamma probe is therefore capable of sampling a much larger volume than that which would normally be recovered from a core or RC hole. These measurements are used to estimate uranium concentrations, with the assumption being that the uranium is in (secular) equilibrium with its daughter products (or radio-nuclides) which are the principal gamma emitters. If uranium is not in equilibrium (viz. in disequilibrium) – as a result of the redistribution (depletion or enhancement) of uranium and/or its daughter products - then the true uranium concentration in the holes logged using the gamma probe will be higher or lower than those reported in the announcement. Testwork completed for the company by ANSTO Minerals indicates that the Marenica deposit is in secular equilibrium (viz. disequilibrium is not apparent)

*The information in this announcement that relates to Mineral Resources is based on information compiled by a team of full time employees of SRK Consulting (UK) Ltd which was directed by Dr Mike Armitage.*

*Dr Armitage who is a Member of the Institute of Materials, Minerals and Mining and a Fellow of the Geological Society of London, both of which are 'Recognised Overseas Professional Organisations' ('ROPOs'), is the Chairman of SRK Consulting (UK) Ltd and has taken responsibility for the Mineral Resource aspects of SRK's work. Dr Rob Bowell, a Principal Geochemist with SRK and who is also a Fellow of the Geological Society of London as well as a Fellow of the Institute of Mining, Materials and Minerals and a Member of the Royal Society of Chemistry takes responsibility for any comments related metallurgical testwork.*

*Other team members, Dr John Arthur and Ms Tracey Laight are both Fellows of the Geological Society of London, Dr Arthur is also a Member of the Institute of Materials, Minerals and Mining.*

*Both Dr Armitage and Dr Bowell have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they have undertaken to qualify as a Competent Persons as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Both Dr Armitage and Dr Bowell consent to the inclusion in this announcement of the matters based on their information in the form and context in which these appear."*
