ASX RELEASE

Killi Killi West Phase 1 Drilling Results

The Directors of Orion Metals Ltd (ASX:ORM) are pleased to announce that assay results have been received for the first phase of RC drilling on the Killi Killi West Prospect situated in the Tanami, Central Australia, has been completed. A total of 1,116 metres was drilled in the programme of 19 holes at the prospect.

Analytical results indicate that the rare earth element values established in the outcrop sampling did not persist to depth and only mildly anomalous levels were reported in some of the intercepts.

However significant anomalous gold was recorded in broad sections, mostly in those that should have been REE-bearing, in a group of holes in the eastern part of the drilling pattern. These are summarised as follows:-

<u>Hole No.</u>	<u>Intercept</u>	<u>Grade</u>	<u>Maximum Value</u>
KK43	25 - 44m (19m)	0.07 g/t Au	0.56 g/t.
KK44	29 - 43m (14m)	0.32 g/t Au	1.02 g/t
	47 - 59m (12m)	0.46 g/t Au	1.83 g/t.
KK45	25 - 39m (14m)	0.07 g/t Au	0.40 g/t
	54 - 66m (12m)	0.08 g/t Au	0.42 g/t.
	(including 3m @ 1.67 g/t Au from 47 – 50m)		
KK46	0 – 10m (10m)	0.14 g/t Au	0.67 g/t
	23 - 45m (22m)	0.13 g/t Au	0.87 g/t.
KK47	0 – 21m (21m)	0.07 g/t Au	0.52 g/t.
KK48	24 – 31m (7m)	0.02 g/t Au	0.06 g/t

A follow-up drilling programme is planned for October to check for possible extensions of this zone of anomalism, as well as holes away from the prospect on radiometric anomalies and structural features. The programme shall include a number of holes on the strike extensions of the Killi Killi East prospects and testing of structural features that are considered possible sources of the mineralisation.
