AWARD OF MAJOR POWER CONTRACT

Rectifier Technologies core business is in the design and manufacture of emergency backup power systems for industrial and communications markets.

Rectifier Technologies has received an order to supply power systems to provide secure power to the plant control and protection systems of a major infrastructure project.

The complex requirements of this order will be provided by novel integration of Rectifier Technologies own products and those of other suppliers. This is consistent with the strategic direction of developing sales of complex power supply solutions for the industrial and infrastructure market in Australia that was started in the last 18 months.

This project is the largest order received by Rectifier Technologies representing more than 15% of projected sales for the current year.

The momentum generated from such a major project is expected to benefit future Australian sales volume. The order will be delivered during the current reporting year.

Dr Ray Shaw
Chairman
