ARUMA PROGRAMME OF WORK APPROVED AT GLANDORE PROJECT

Highlights

1. GLANDORE

- **PoW approved at Glandore**
- **Glandore 3D Model will be completed in September**
- **Drilling to commence at Glandore in September**

2. ALL TENEMENTS

- **Hyvista Contract signed and will commence in September**
-

The Directors of **Aruma Resources Limited (Aruma) (ASX:AAJ)** are pleased to announce that the PoW has been approved for the drilling at its flagship Glandore Project, located 40km East of Kalgoorlie. This will allow Aruma to start its maiden drilling program over the exciting soil anomalies, >100 ppb Au, defined by previous tenement holders but as yet untested. This will involve testing 5 anomalies over a strike length of some 5 km. Integra Mining's Glandore and Majestic Projects are located along strike to the south east of Aruma's Glandore leases.

It is envisaged that the program will involve some 30 RAB/RC holes into the anomalies at to 100 m depth in the centre of the anomaly. The drilling as proposed will cover the soil anomalies mentioned but also investigate and extend the previously identified target zones.

The 3D Leapfrog Model will be used to fine tune this drilling as well as approx 1000m of additional infill drilling on the previously announced sections at Axial Planar, Supergene and Eastern Lode Zones.

The total of the drilling Program is some 4000m. The primary aim of the drilling is twofold, and that is to identify potential resources and to sample the large untested soil anomalies.

The programme outlined above will take some three weeks and the assays a further four weeks.

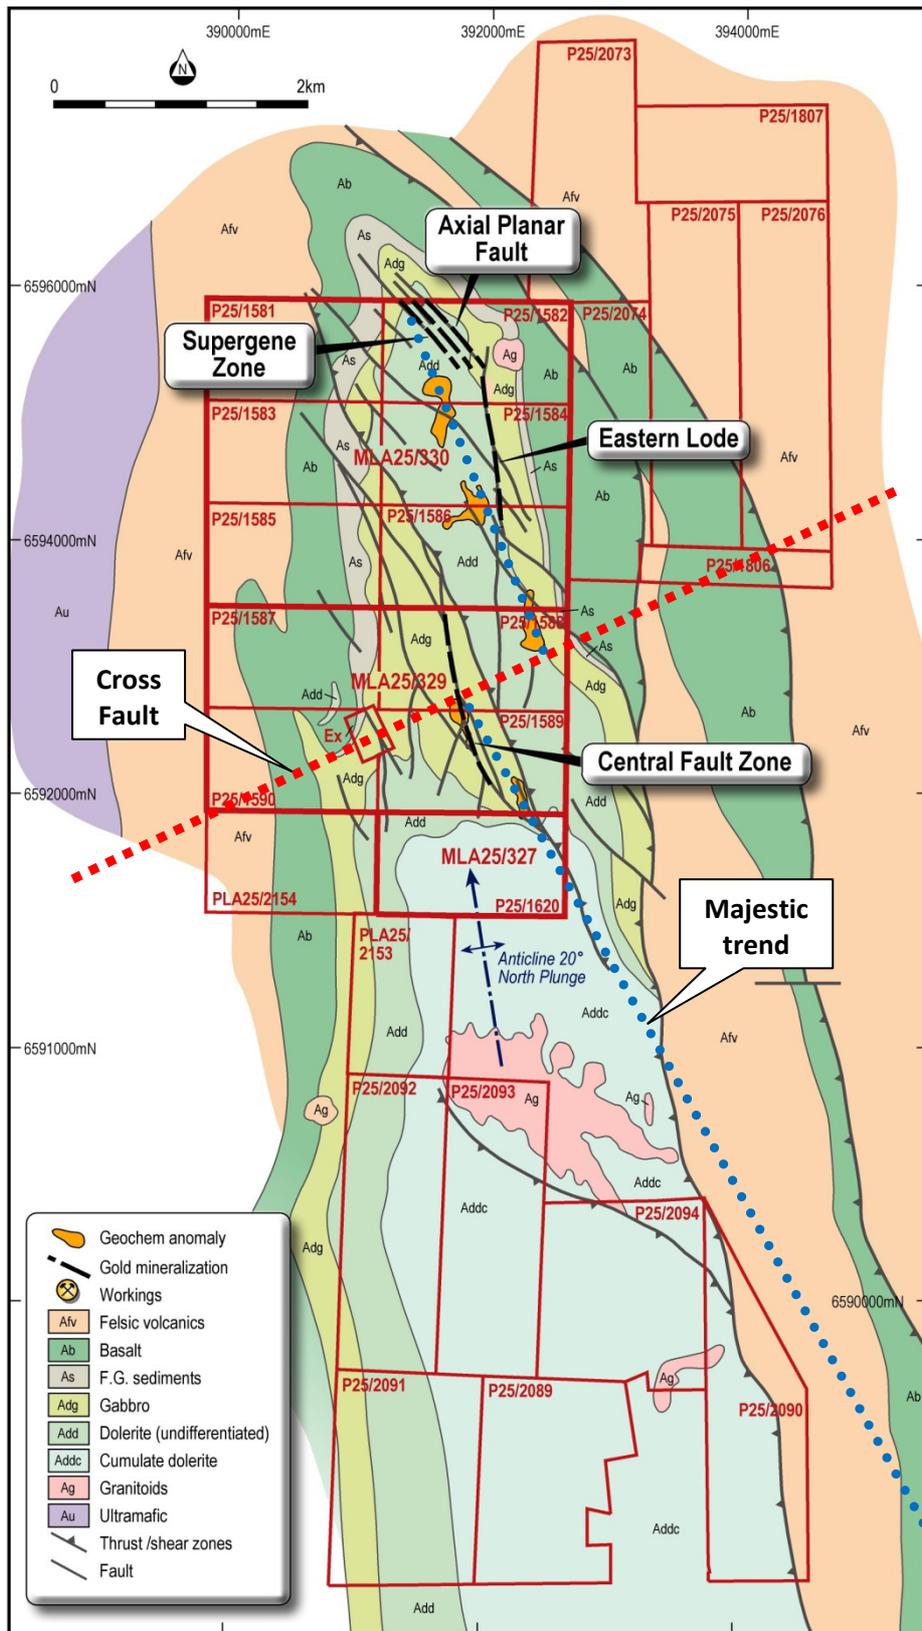

Figure 1 Glandore Lease plan showing Soil Anomalies (orange) on geology with Prospects.

Previously announced drilling programmes have encountered intersections 10.25m at 10.27 g/t Au from 58m, 8m at 10.4 g/t Au from 18m, 9m at 8.37 g/t Au from 17m and 9m at 4.22g/t Au from 13m.

Mr Schwann is an employee of the Company. Mr Schwann has sufficient relevant experience to qualify as a Competent Person as defined in the JORC Code (2004) and consents to the inclusion of this information in the form and context in which it appears.

About Aruma

Aruma is a focussed West Australian based gold exploration company which has four prospective project areas within the Eastern Goldfields region of Western Australia. Inclusive of several tenements which are still under application, Aruma's tenement package now totals approximately 376 km².

The flagship Glandore Project is approximately 40 km east of Kalgoorlie-Boulder. Previous exploration of the Glandore Project, has identified several advanced exploration areas and some twenty under-explored prospective exploration targets.

The Kurnalpi South Project lies approximately 100 km to the east of Kalgoorlie-Boulder and comprises three gold exploration prospects designated as Pinnacles South, Mt Quin and Steeple Hill, within a minimally explored area of a greenstone belt that hosts several major mines.

The Laverton East Project, located approximately 20 km east of Laverton. Previous exploration of the area includes relatively shallow RAB drilling over much of the tenement and reconnaissance rock chip sampling returned several gold assays of greater than 0.2 g/t.

The Jundee South Project is approximately 50 km to the east of Wiluna within the Yandal Greenstone belt. The Gourdis alluvial deposits are thought to have been derived from the west, near or on the Aruma Lease.

Each of the project areas can be readily accessed from the regional towns of Kalgoorlie-Boulder, Laverton or Wiluna.
