HIGHLIGHTS

Argentina Projects (gold, silver)

- Inaugural drilling program completed at SM6 Prospect, Sierra Morena Project.
- Results confirm exploration model is valid and that further exploration of the Prospect area is warranted.
- Western Vein has wide zones of 10 to 60 metres true width multiphase vein brecciation with highly anomalous Au, Ag and As (SM-12-05).
- Deep penetrating geophysical survey to commence in February 2013 to assist in drill targeting for next phase.

New Zealand Project (gold, silver)

- Definitive agreement signed to acquire 100% of the Puhipuhi low sulphidation epithermal project.
- Ministerial approval granted on January 11, 2013 for transfer of exploration permit to De Grey Mining Ltd.
- Previous significant drilling results include 18m @ 3.38g/t Au and 10.3g/t Ag, (including 2m @ 17g/t Au and 15g/t Ag) in PPRC6, and 2m @ 7.6g/t Au and 70g/t Ag in PPRC31.
- 9 high priority drill ready target areas, based on geophysics and geochemistry.
- Northern silver workings not explored despite 1.35g/t Au and 304g/t Ag reported in historical exploration.

Turner River Project (gold, base metals, Polymetals Mining Ltd earning 75%)

- Polymetals complete drilling (1,948m RC and 860m Diamond core) surface channel sampling and geological mapping on Wingina Well Gold Project.
- A scoping study will be conducted over the Wingina Well Gold Deposit in the 1st half of 2013.

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

ARGENTINA PROJECTS

Through agreements and tenement applications in its own right, De Grey has secured mineral rights over approximately 4,675 sq km of ground in the Santa Cruz and Rio Negro Provinces of southern Argentina (Patagonia), making the Company one of the largest tenement holders in the region (Figure 1).

Figure 1: Locations of De Grey's projects, Argentina

Santa Cruz Province

De Grey's Santa Cruz projects lie within the Deseado Massif, a geological region of prolific low-sulphidation epithermal gold-silver mineralization that has been recognised only relatively recently. Resources and ore reserves discovered in the region since about 1990 total 17.5Moz Au and 525Moz Ag.

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

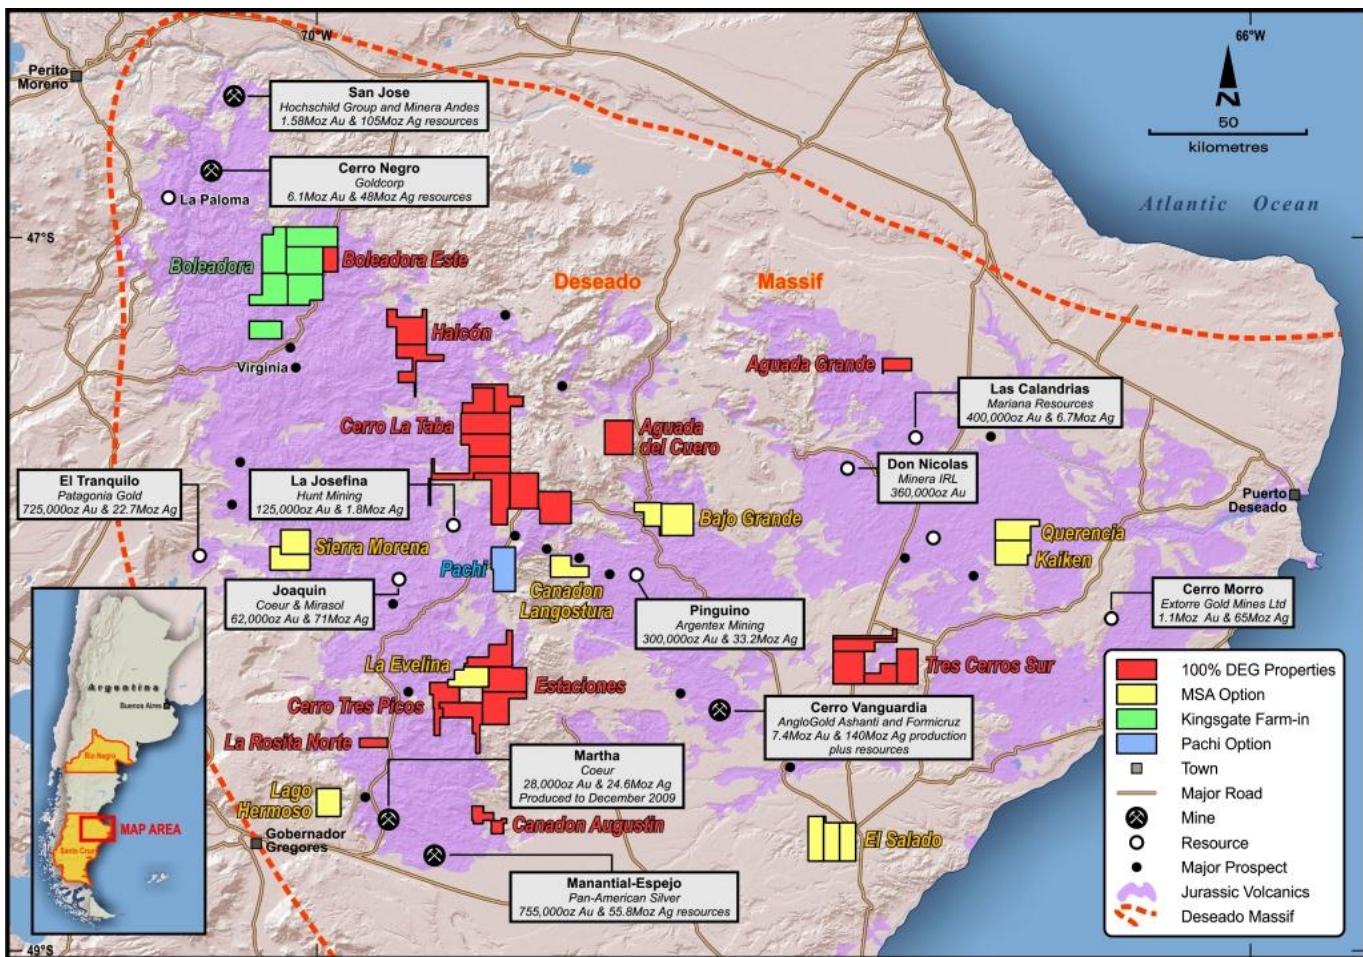

Figure 2: Locations of De Grey's projects, Santa Cruz, Argentina

Santa Cruz Province – Sierra Morena Project

During the quarter, De Grey completed a land access agreement with the private landowners of the Estancia (Farm) that covers the majority of the Sierra Morena Sur licence. This agreement allowed De Grey to commence the planned exploration of the SM6 Prospect (Figure 3).

Initially this comprised surface sampling, mapping and field investigation of Aster anomalies that resulted in extensions of known lines of mineralization and new areas of elevated indicator element that warrant further follow up.

The exploration programme for the Sierra Morena prospect culminated a diamond drilling programme designed to test the east and west vein breccias that constitute the targets at the SM6 project. Originally a ten hole RC drill programme was planned at SM6 but due to logistical difficulties the programme was completed using a diamond drilling rig.

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

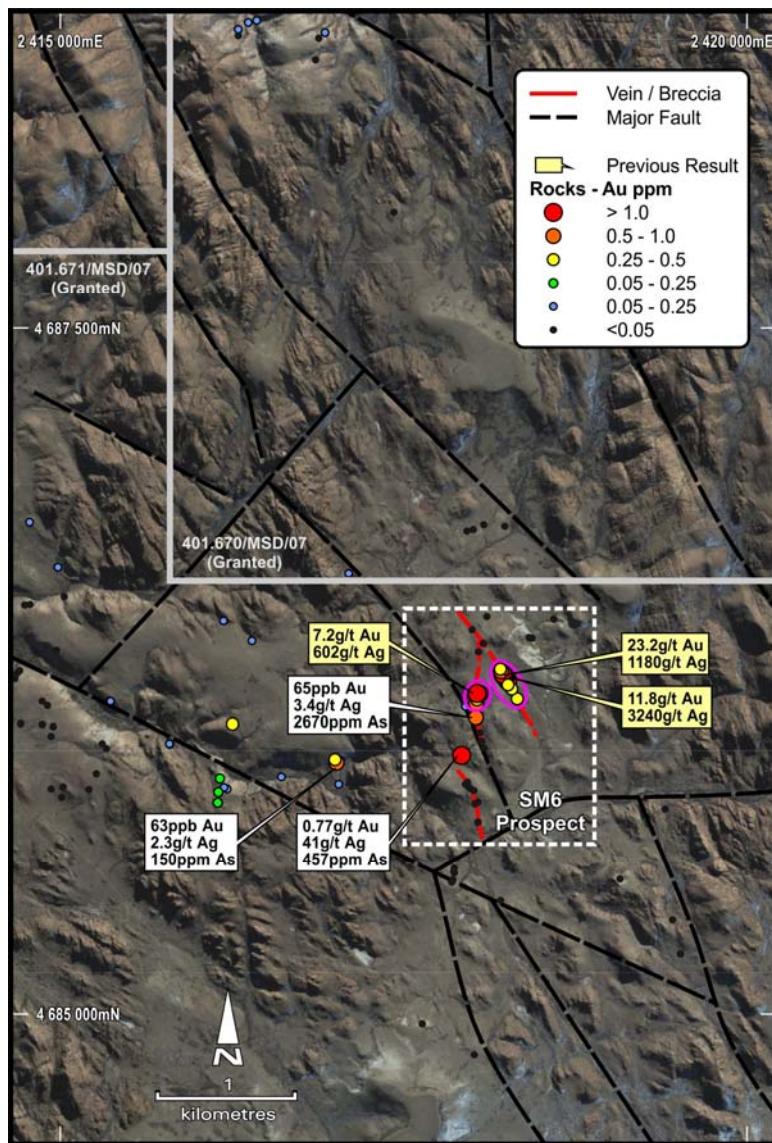

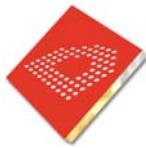

Figure 3: Surface sampling results at SM6 (all results previously reported)

Subsequent to the end of the Quarter, the company reported the results from the 1179.6m eight hole diamond drilling program at the SM6 Prospect (Table 1 & Figure 4) where previous surface sampling had discovered two sub-cropping zones of silicification and brecciation with high grade Au-Ag mineralization associated with a large area of acid sulphate alteration, evidence of structural complexity and intrusive rhyolite domes (Figures 3 & 4).

The presence of quartz-adularia vein clasts within the hydrothermal breccia, the presence of rhyolite dykes and porphyritic fragments in the core, strong clay alteration and highly anomalous Au-Ag-As geochemistry throughout (hole SM-12-06 this zone returned 52m @ 77ppb Au, 4.3g/t Ag and 1,318ppm As) the holes drilled into the Western Vein are confirmation of this targets potential. The Western Vein has been interpreted as an eruption breccia, which are commonly developed at higher levels above chalcedony-ginguro Au-Ag fissure veins.

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

All drilling in the Western Vein zone intersected encouraging mineralization, alteration and textural evidence at relatively shallow depths of a large and complex epithermal system.

Results from the drilling confirmed the exploration model is valid and that further exploration of the prospect area is warranted.

Hole	East	North	Elevation	Azimuth	Dip	Depth
SM-12-03	2418204	4687453	680	45	-60	140.00
SM-12-04	2418186	4687436	681	45	-60	233.15
SM-12-05	2418080	4687325	670	270	-60	170.15
SM-12-06	2418068	4687250	664	270	-60	110.00
SM-12-07	2418069	4687402	677	125	-60	86.15
SM-12-08	2418230	4687521	680	225	-60	70.15
SM-12-09	2418080	4687325	673	270	-70	217.75
SM-12-10	2418068	4687250	662	270	-78	152.25

Table 1 – SM6 Drillhole locations

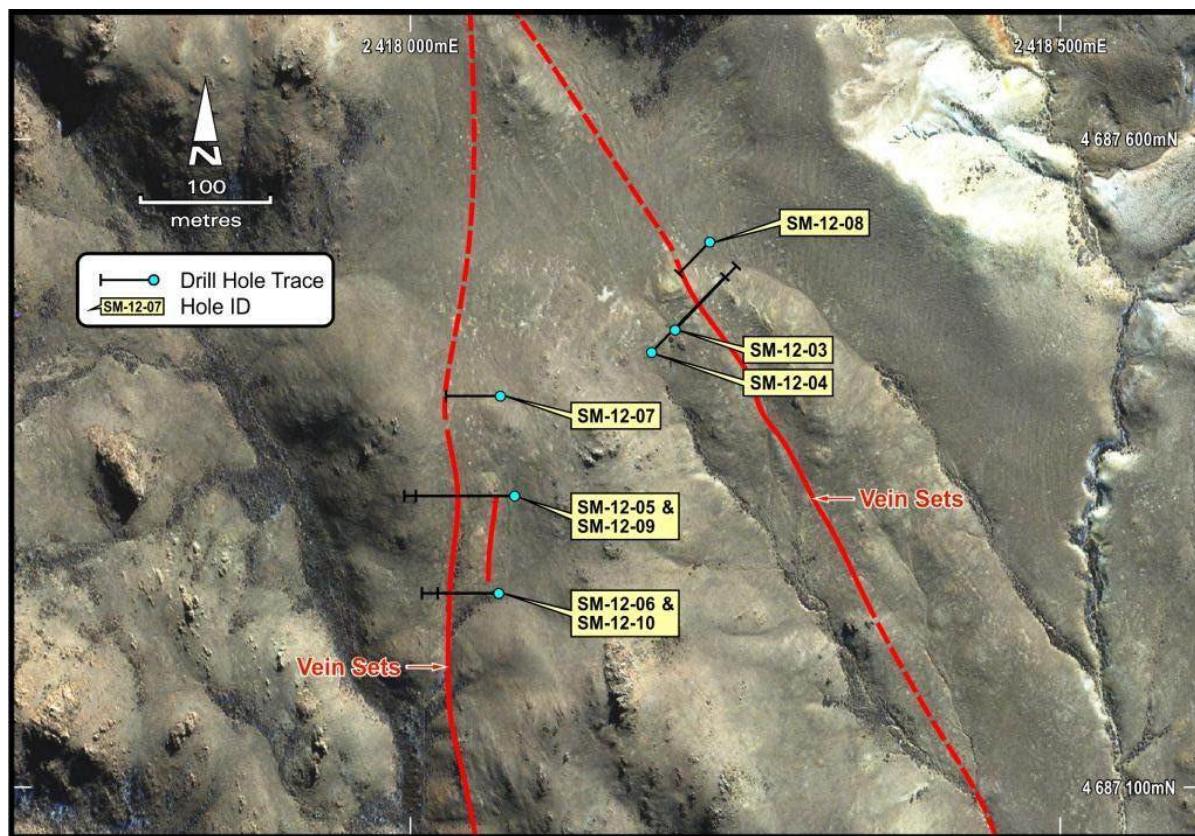

Figure 4: Locations of De Grey's 8 diamond holes – SM6

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

Despite the encouraging individual silver grades (highest 32 ppm Ag, SM12-10 10.3 – 11.3m) and short runs of elevated silver (3m @ 22.3ppm Ag, SM12-04 75.0 – 78.0m) it was the extensive intercepts of elevated elements (Table 2) that were particularly pleasing from a volume of potential mineralization perspective (Figure 5).

Hole	From	To	Metres	Au (ppb)	Ag (ppm)	As (ppm)
SM-12-05	20.00	125.00	105	25.0	3.00	436

Table 2 – Significant intersection from SM6 (see Appendix A for full results)

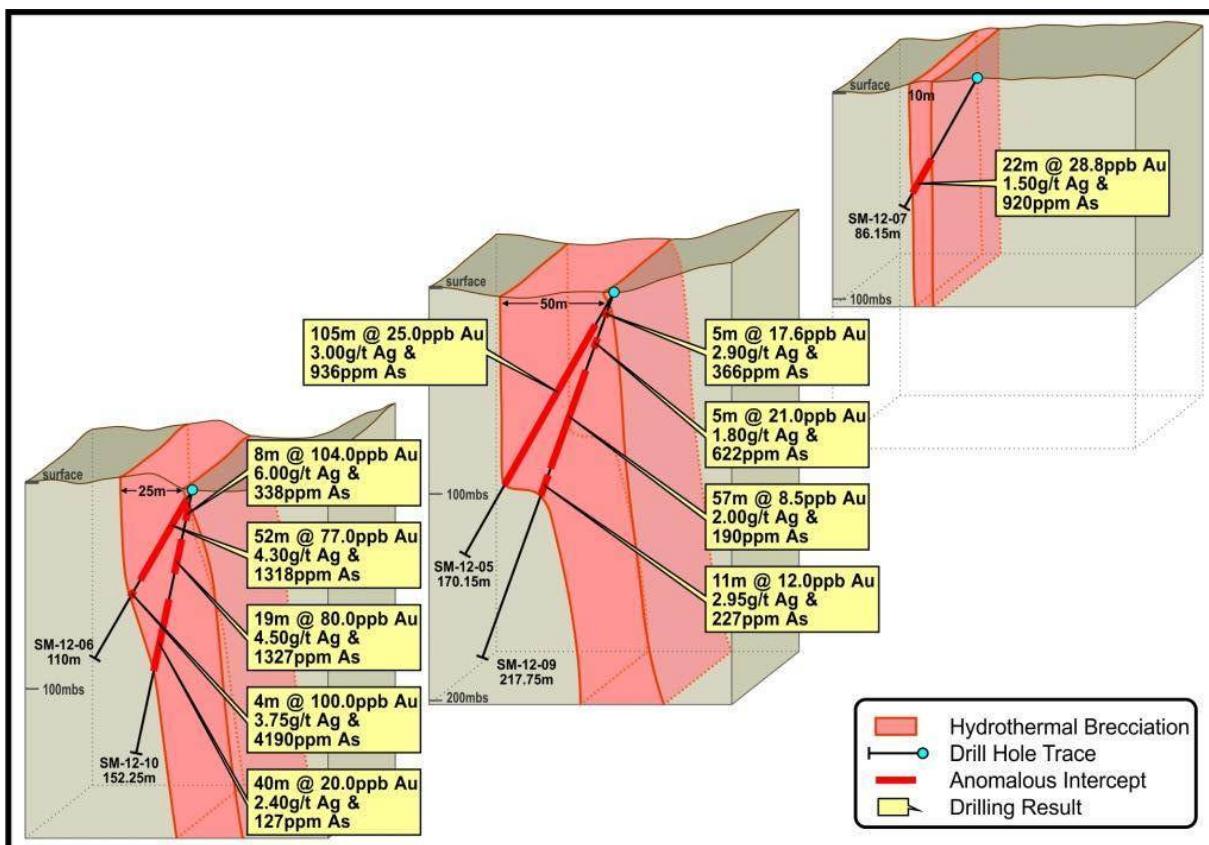

Figure 5: Stacked Sections Western Vein (stylized)

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

De Grey considers the SM6 target area to be highly prospective for gold-silver mineralization associated with low sulphidation epithermal veins, and the company will complete a CSAMT survey over the SM6 area in February 2013 to detect highly resistive bodies up to 400m-600m below surface (depending on ground conditions and resistivities). This information will assist in targeting in the next drilling program.

Santa Cruz Province – Pachi Project

Due to land access delays, and the delayed start to the drilling at SM6 Prospect, drilling was not completed over the Pachi Project during the quarter.

De Grey will continue to work on the finalization of the land access agreement with the landowner to complete the planned drilling program over the project during the 1st half of 2013.

Santa Cruz Province – Other Properties

No work was completed on other Santa Cruz Properties during the quarter. Fieldwork will commence at the Boleadora and Halcon Projects in the March 2013 quarter.

Rio Negro Province

Due to the focus shifting to Santa Cruz Province during the summer months, no further work was completed on the Rio Negro Projects during the quarter. De Grey intends to re-commence exploration in Rio Negro during the winter when fieldwork is extremely difficult in Santa Cruz Province.

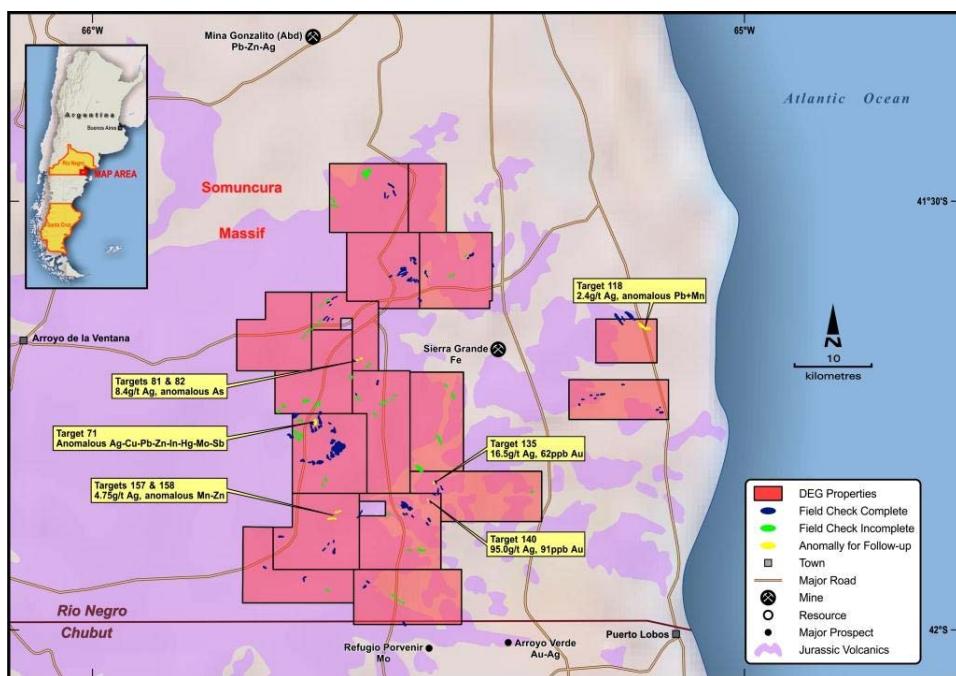

Figure 6: Locations of De Grey's projects, Rio Negro, Argentina

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

NEW ZEALAND – PUHIPUHI EPITHERMAL GOLD/SILVER PROJECT

During the quarter, De Grey signed a definitive agreement with Waihi Gold Company Ltd, to acquire 100% of the Puhipuhi Project located on the North Island of New Zealand (Figure 7).

The Project comprises one exploration permit (EP51985) that was granted in 2009 and has a term of five years (with the right to a further five year extension available). The permit area comprises 61.16 sq km located approximately 30km NNW of Whangarei, in the Northland Region of New Zealand. On January 11, 2013 De Grey received Ministerial consent from the New Zealand Ministry of Economic Development for the transfer of the Exploration Permit.

The Project is wholly contained within an area defined by the New Zealand Government's Ministry of Economic Development as being open for mineral exploration. The majority of the project is located on private lands, predominantly farmland and the area provides straightforward access, an educated workforce and good availability of drilling contractors.

The Project is interpreted to represent a well preserved hot spring sinter/breccia system that formed as an outflow from a venting geothermal system. Mineralization in these systems is commonly restricted to fluid upflow settings and very low gold contents are deposited at surficial levels. Fluid upflow settings typically form fissure vein systems at depth, developed in competent basement rocks and fluid quenching in such an environment may produce good gold grades. Fissure vein epithermal gold-silver mineralization commonly forms in dilatant structural environments and examples of these systems include Hishikari (Japan), Cracow (Queensland), Sleeper (Nevada) and Waihi (New Zealand).

The potential for Puhipuhi to host such a fissure vein system has been recognised by several explorers during the last 30 years, however drilling to date has only been relatively shallow, and hasn't tested the deeper parts of the system where the gold-silver mineralization is expected to occur. Other drill targets generated from multi-element surface geochemistry and ground based geophysical surveys (IP and CSAMT) also remain untested within the Project area.

In the March 2013 quarter De Grey intends to commence a programme of work to orientate initial target drilling. This programme will include, data review, geological mapping and sampling, and interpretation of geophysical data (magnetic, radiometrics, IP, CSAMT).

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

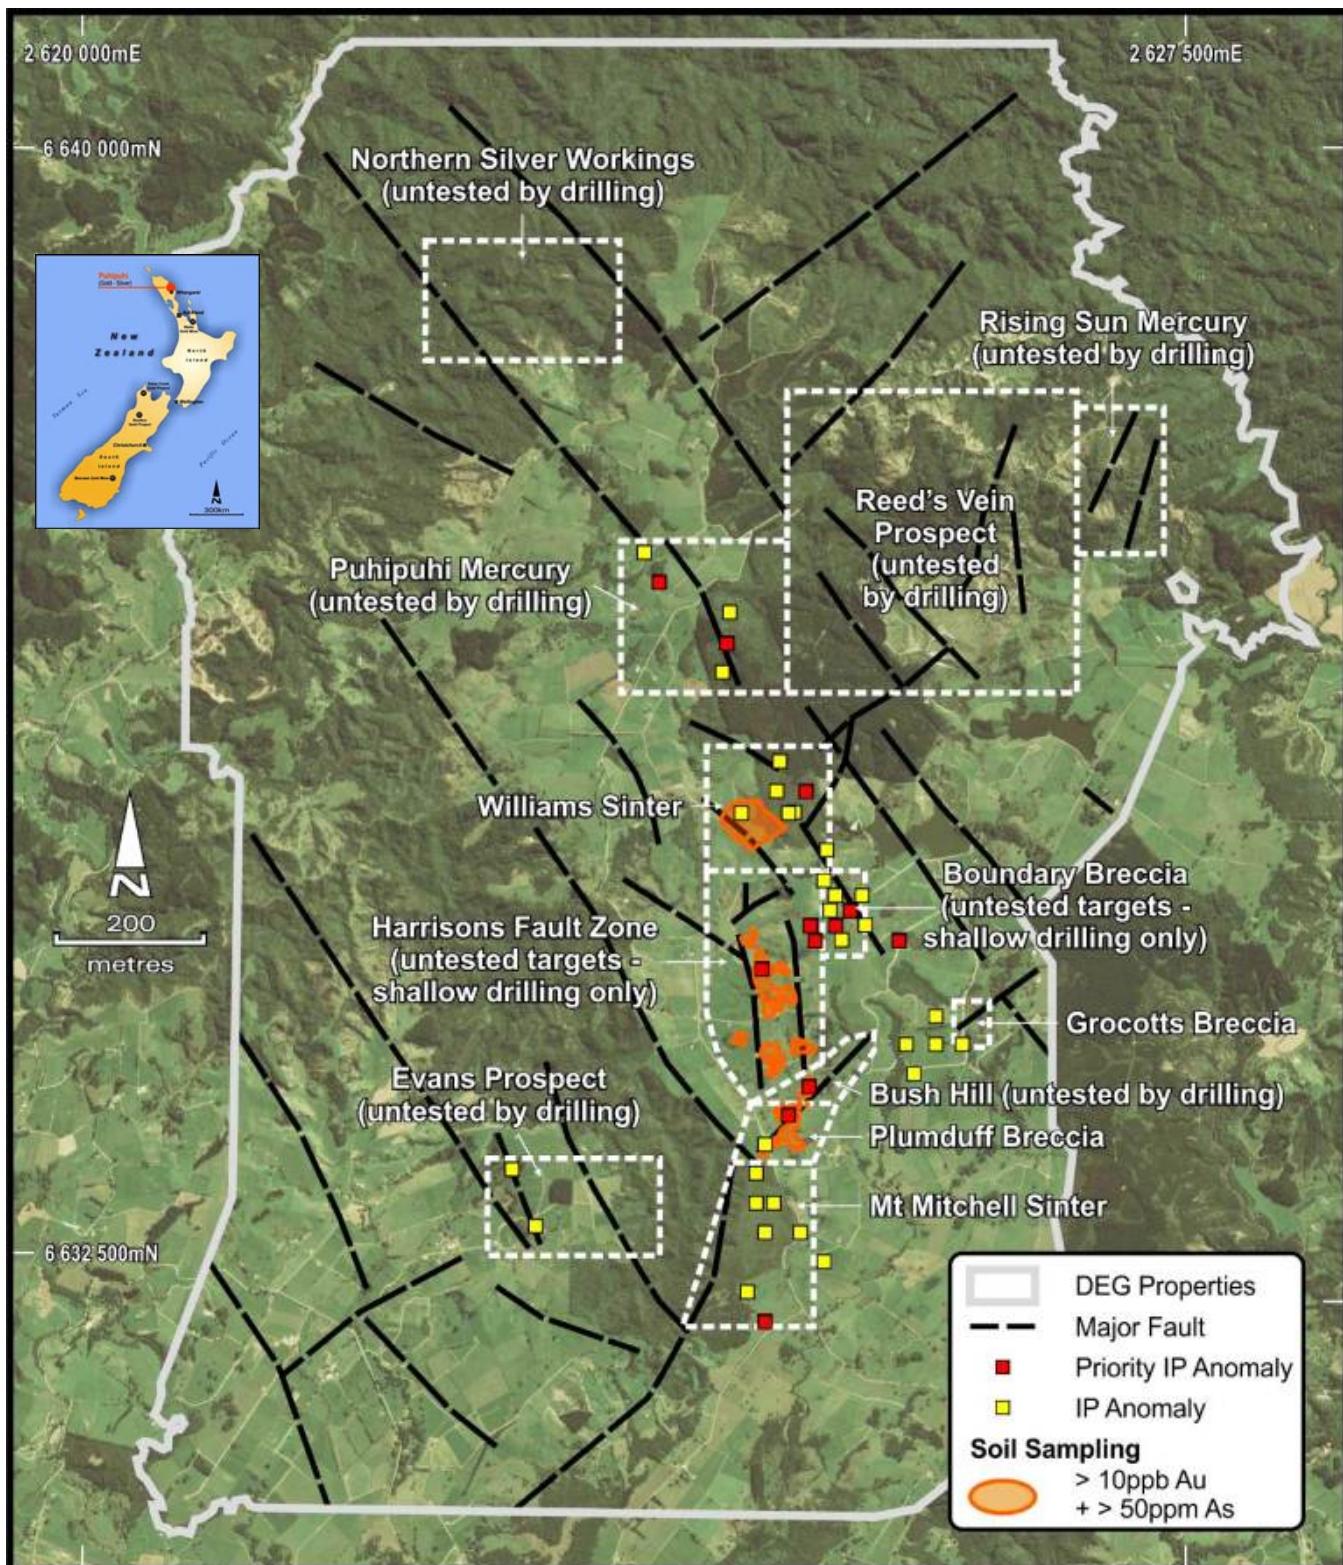

Figure 7: Locations of Puhipuhi project, New Zealand

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

WESTERN AUSTRALIA - TURNER RIVER PROJECT

In September 2012, Polymetals acquired 100% of Lansdowne Resources, which gives Polymetals the rights to earn into a 75% share of the Turner River Gold and Base Metals Joint Venture (Figure 8), and the option to purchase a 75% interest in the Wingina Well gold resource.

Turner River Base Metals

Since assuming management, Polymetals has completed 1,948m of RC drilling, 860m of diamond core drilling, and a surface channel sampling and geological mapping programme over the Wingina Well project. Drill holes were targeted for resource extension and representative geotechnical and metallurgical testing sampling of the deposit.

A scoping study into the Turner River Project will be conducted in the first half of 2013. The study will consider heap leaching and CIL processing of the ore from the Wingina Well, Amanda and Mt Berghaus prospects. Any plant design and capital works will factor in the possible synergies from potential additional base metal recovery from the Discovery and Orchard Tank deposits.

Preliminary open pit optimisation work has indicated potential economic mining development scenario's for Wingina Well, Amanda, and Mt Berghaus gold deposits and the Discovery and Orchard Tank base metal deposits. Further work will be undertaken with a revised resource model to finalise these assessments for the scoping study.

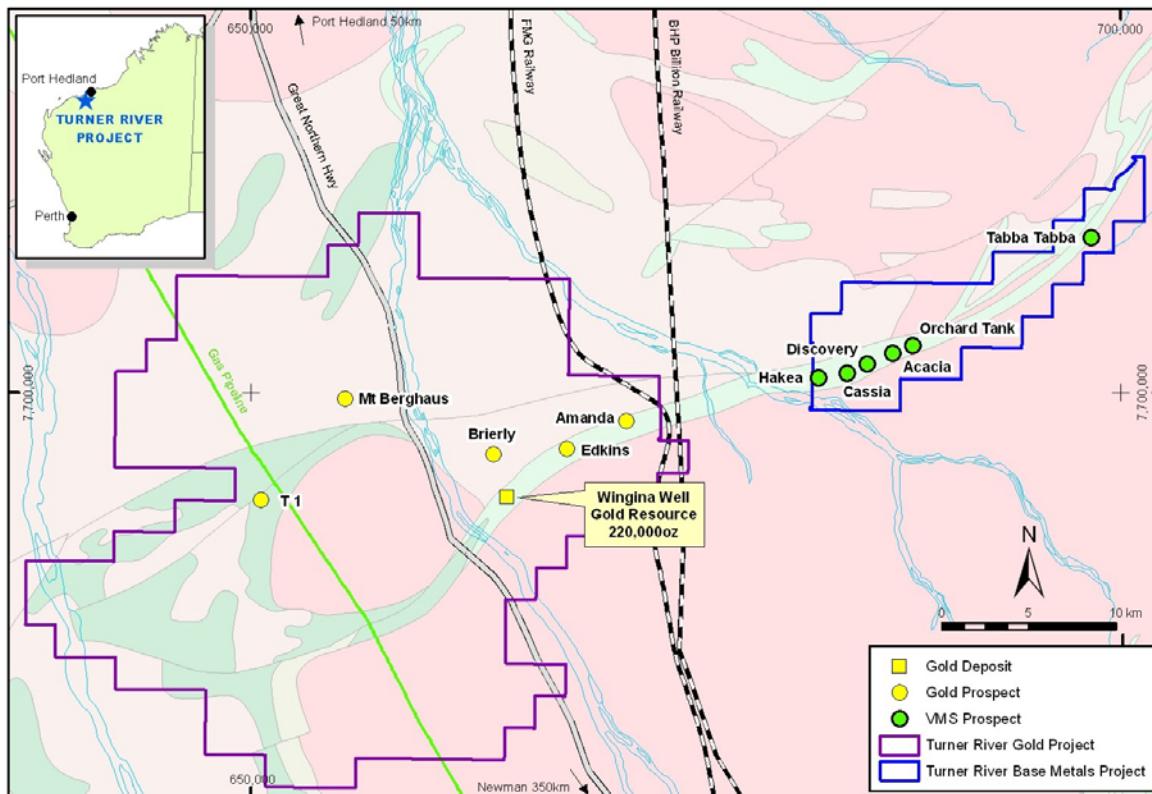

Figure 8: Turner River Gold and Base Metals project areas

DE GREY MINING LTD QUARTERLY OPERATIONS REPORT FOR THE QUARTER ENDING 31 DECEMBER 2012

The information in this report that relates to exploration results is based on information compiled by Mr Glenn Martin, who is a Member of the Australasian Institute of Mining and Metallurgy and a full time employee of De Grey Mining Limited. Mr Martin has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves." (the JORC Code). Mr Martin consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
