Refrigerant to be Available for Commissioning

Perth-based clean power company Enerji Limited (ASX:ERJ) will have the approximately 1,800kg of R245fa refrigerant required to “charge” the Opcon Powerbox in Carnarvon when commissioning commences.

The refrigerant that is vaporised by the waste heat and then drives the Opcon Powerbox twin-screw expander to generate power is located in a holding facility in Carnarvon awaiting installation by a licensed contractor under the expert guidance of an Opcon engineer.

Last year, as part of pre-commissioning, a small amount (approximately 50kg) of the refrigerant was installed to replace the nitrogen used in the transport of the Opcon Powerbox from Sweden. The remaining 1,800kg of refrigerant will be installed early in the commissioning phase. This is one of the precursors to operating the Opcon Powerbox.

The refrigerant was delivered to the Company on a date that was earlier than expected. This has led to an unfortunate dispute with the supplier about the timing of payment. The supplier has commenced winding up proceedings against the Company and lodged a “Notice of Application for Winding Up Order” with the Australian Securities and Investments Commission. The Company intends to settle its account with the supplier this week and seek to have the Application for an Order to Wind Up the Company dismissed. The Company has discussed this matter with the supplier and each party’s solicitors have also been communicating to amicably resolve the issue.

About Enerji

Enerji Limited is a Perth-based clean power company focussed on delivering waste heat to power systems, based on the Opcon Powerbox, in Australia.

The Opcon Powerbox cogeneration technology transforms waste heat into electricity and therefore creates significant energy cost savings and reduced CO₂ emissions for its customers.

Enerji has exclusive sales and distribution rights for the Opcon Powerbox in Australia.

The Opcon Powerbox, manufactured in Sweden by Opcon, represents a significant commercial opportunity through application to industrial, mining and power generation operation
