

ASX Announcement

Sirius' Asset Management Division chosen by City of Stonnington, Town of Gawler and Carbon Conscious for Asset Management Information Systems (AMIS)

6th August, 2012: Sirius (ASX: SIU) today announced that its Asset Management Division has been awarded contracts to supply and implement Asset Management Information Systems (AMIS) for the City of Stonnington (Victoria) as well as the Town of Gawler (South Australia) and Carbon Conscious (Western Australia).

Sirius Corporation Managing Director & Group CEO, Tony Onsley commented that "These are significant wins in a competitive environment with the aggregate value of these contracts in excess of \$500,000. Together they highlight the increasing market penetration of our asset management products and services and the potential for the new Division to significantly improve market share in the future."

Mr Onsley added "Stonnington is a leading organisation in Australian Local Government and its selection of AssetMaster is a strong indication of the strength of the asset management solution offering we have, and the knowledge and experience we can bring to the table through our people. Town of Gawler strengthens our position in South Australia and Carbon Conscious expands our reach into Western Australia"

The Asset Management Division, which has in excess of 110 clients, was created last month when the asset management teams from Pinnacle Software Solutions (acquired by Sirius in September 2011) and InfoMaster's AssetMaster (a wholly owned subsidiary of Sirius) were combined, leveraging their technologies, people and processes.

The new Division has also added asset management business process consulting services to enhance the portfolio offering to clients. Martin O'Connor, CEO of the Asset Management Division stated "traditionally AMISs map the technology solution to pre-existing processes. However process alignment, re-engineering and data integration to best practice levels can significantly improve the management of asset data, asset analytics and decision support. We have brought on board the expertise in these areas to deliver these benefits to clients"

Full details of the contract wins are contained in the press release below.

END ANNOUNCEMENT

AssetMaster chosen by City of Stonnington, Town of Gawler and Carbon Conscious for Asset Management Information Systems (AMIS)

6th August 2012: AssetMaster, a leading supplier of asset management technology solutions and services to Councils, today announced it has been awarded the competitive tender for the supply and implementation of an Asset Management Information System by the City of Stonnington (Victoria) to manage its assets and infrastructure. This follows shortly after AssetMaster's selection by Town of Gawler (South Australia) and Carbon Conscious (Western Australia).

The AssetMaster solution delivers a comprehensive single-snapshot view of all assets and asset types on a single platform. Incorporating all physical and financial processes and transactions, AssetMaster helps identify possible cost savings and efficiencies and helps reduce the total cost of ownership. Its features include financial integration, full componentisation of assets, spatial decision support and predictive modelling.

Keith Grant, Asset Management Coordinator Manager for the City of Stonnington said: "AssetMaster was selected by the City of Stonnington after a comprehensive tendering exercise. There were a number of features that influenced the selection process in favour of AssetMaster. This included AssetMaster's flexibility to create unlimited asset classes of both simple and complex assets with linkages to common asset components. We were impressed by Assetmaster's new 'billboards' data-interrogation and reporting tool that allows all users to extract information and reports from the system without the requirement to engage IT resources and consultants. Finally, Stonnington has placed a heavy emphasis on implementing an integrated works order system, we believe that implementing AssetMaster together with their mobile solution, AM Online, provides the best solution for the Council."

Wasantha Kaludewa, Engineer – Technical Services for Town of Gawler, said: "The AssetMaster software system was selected to manage the infrastructure assets of the Town of Gawler. The system has the functionality to provide a whole-of-life cycle for asset management with the capability and capacity to apply across all types of Council assets. In addition, the system has the flexibility to be continuously customised to suit changing asset management needs."

Martin O'Connor, AssetMaster/Pinnacle CEO commented: "We are looking forward to a successful partnership with City of Stonnington, Town of Gawler and Carbon Conscious, one that continues to provide great benefits to their respective organisations. The awarding of these contracts is great recognition of the software platform as well as the knowledge of our team, which has been created through the combination of the AssetMaster and Pinnacle Software Teams."

City of Stonnington, Town of Gawler and Carbon Conscious join a list of 110 plus clients using AssetMaster or Pinnacle asset management solutions.

AssetMaster is a division of InfoMaster Pty Ltd, a wholly owned subsidiary of Sirius Corporation Limited (ASX:SIU). AssetMaster together with Pinnacle Software Solutions, forms the Asset Management business unit of the Sirius Group
