## Ceramic Fuel Cells signs long term Powder Plant Project

Ceramic Fuel Cells Limited (AIM / ASX: CFU) a leading developer of generators which use fuel cell technology to convert natural gas into electricity and heat for homes and other buildings, is pleased to announce that it has secured a long term project for its powder plant in the United Kingdom.

Ceramic Fuel Cells has signed an agreement with a multinational ceramics and speciality chemicals company for them to utilise the plant to develop high quality ceramic powder products. The powder plant equipment and CFCL operational staff at the plant will be allocated to the project on a full time basis.

To cover the operating costs of the plant and related staff, Ceramic Fuel Cells will receive a fee of GBP 450,000 for the 12 month project. The agreement also includes an option for the customer to purchase the plant and licence the related intellectual property for a pre-agreed price. For commercial reasons the identity of the customer and the purchase price are confidential.

The plant, in Bromborough, UK, uses Ceramic Fuel Cells' patented equipment to make nano-size ceramic powders which can be used in a range of applications and products.
