### **MIKOH's New Octopus Tag**

The directors of MIKOH Corporation Limited (**ASX: MIK**) are pleased to announce that they are in the final stages of development of the new "Octopus" Tamper Tag.

The Octopus tag is designed to meet and exceed performance of our current headlamp tag while being less restrictive to headlamp functionality and overall less conspicuous. It is designed to function with either NXP or Alien Higgs chipsets and is optimised for both windshield and headlamp applications.

The Octopus tag still needs to undergo tamper performance confirmation and silver ink process parameter optimisation. The Octopus tag will then be radio frequency tested at Somapa's premises in Thailand and finally environmentally stress tested. It is expected that all this will be completed by the end of August 2012.

Currently, the MIKOH Smart&Secure™ tag is a combination of various different intellectual properties, the Octopus tag will be 100% owned by MIKOH.

**Prototype of the new Octopus tag**

The Octopus tag will be manufactured by Star RFID who have committed to building a new factory and are installing new equipment for the manufacture of the tag in Thailand. The directors of MIKOH welcome the opportunity of partnering with Star RFID and believe this to be the beginning of an important strategic relationship that will significantly assist MIKOH in realising the value of what has been achieved over the last 18 months.

Richard Sealy
