Norfolk Group awarded \$14 million contract from CTEC for Diamantina Power Station

Leading integrated engineering company Norfolk Group Limited (ASX: NFK) ('Norfolk' or 'the Group') has been awarded a contract valued at more than \$14 million by CTEC Pty Limited ('CTEC') for electrical and instrumentation works at the Diamantina Power Station.

The contract represents the first portion of four work packages associated with the 242 megawatt (MW) combined cycle Diamantina Power Station, which is currently under construction in Mount Isa, Queensland. Norfolk is in a good position to secure the subsequent work packages.

Norfolk's electrical and communications engineering specialist, O'Donnell Griffin, along with its mechanical engineering, heating, ventilation and air conditioning (HVAC) business, Haden, will carry out the works.

The contract involves electrical instrumentation, HVAC, fire protection and occupant warning systems works, including installation, commissioning, service and maintenance.

Norfolk's Managing Director, Glenn Wallace, said: "This contract is further evidence of the building momentum at Norfolk. It is particularly pleasing given it is another project where O'Donnell Griffin and Haden will combine their specialist skills to deliver a superior result to the customer."

"The Group has developed a strong reputation in the power sector, which we continue to view as an area of future growth."

The contract for this portion of works will commence immediately and is expected to run until the second quarter of calendar year 2013.
