### **Appointment of Chairman**

AnaeCo is pleased to announce the appointment of Professor Michael Dureau (FTSE, HonFIEAust., FIChemE, CPEng, CSci, FAICD, FAIE, JP) as Chairman of the Company with effect from today.

Prof. Dureau has been a non-executive director since August 2005 and in that period has seen the Company grow and develop through the formation of the investment alliance with Palisade Regional Infrastructure Funds, the commercialisation of the DiCOM technology in its application at the Western Metropolitan Regional Council (WMRC) project and the listing on ASX. Having served four years as a non-executive director, and given his professional background and experience, he is ideally suited to step into the role as Chairman of the Company.

He is a former Managing Director of ABB Power Generation and ALSTOM Power and has extensive experience with international organisations, as well as the public sector. His experience extends to the fields of design, production and project management, sales and marketing, supply management, logistics, quality and risk management across the chemical, water and waste, control & instrumentation and power industries. At the University of Sydney he is an Adjunct Professor of Engineering and the Chairman and Executive Director of the Warren Centre for Advanced Engineering Ltd. He is also a non-executive director of Ceramic Fuel Cells Limited.

Tom Rudas, Managing Director of AnaeCo says: 'We are delighted that Michael has agreed to take on the Chairman role. Over the past four years we have developed a very productive working relationship and given Michael's specific experience in engineering, his high-level networks and passion for our business, he is ideally placed to help us achieve our ambitious targets.'

ENDS

### **About AnaeCo**

AnaeCo delivers Alternative Waste Technology (AWT) facilities based on the patented DiCOM bioconversion process. The system incorporates advanced sorting, recycling, anaerobic digestion and aerobic composting to recycle municipal solid waste (MSW) into renewable energy from biogas, agricultural grade compost and recyclables such as steel, aluminium, glass and plastics, thus ensuring maximum diversion from landfill and ensuring social, economic and environmentally sustainable management of MSW.

The DiCOM process enables resource recovery intervention closer to source, with enhancement of existing waste transfer stations now a viable waste management option. AnaeCo's experienced team provides design, construction, commissioning, operation and maintenance services for DiCOM AWT facilities, as well as management of all outputs including renewable energy, compost, recyclable materials and non-recyclable residuals.
