About iWebGate

iWebGate, Limited (ASX: IWG) is a technology company introducing the Virtualization of Network Services. This has been achieved by creating three virtualization-centric software products:

- 1) Virtual Invisible Network (VIN);
- 2) Virtual Segmentation Platform (VSP);
- 3) Virtual Application Container (VAC).

Used separately, these software products solve major security and connectivity problems. Cleverly used together, this software creates a virtualized end-to-end platform between points of origin and points of destination situated in any network (i.e. cloud, on-premise) and Internet transport layers.

Virtualizing Network Services enables cloud providers, network administrators and technology partners (e.g. OEMs, software developers) to efficiently deliver more and superior solutions across any customer network.

iWebGate's product is well positioned to help many enterprises and government agencies. The worldwide cybersecurity and mobility market continues to grow rapidly and is expected to increase from US\$75 billion in 2015 to US\$170 billion by 2020.
