

DTI to Provide Surveillance Systems to London Underground Northern Line

25 August 2016 – DTI Group Ltd (ASX: DTI) (DTI) is pleased to announce the receipt of an order from Alstom UK for the supply, and installation of advanced CCTV surveillance systems for the prestigious Northern Line fleet maintained and operated by Alstom on behalf of Transport for London on the London Underground.

The order involves the supply, and installation of 212 future-proofed and innovative surveillance systems for the entire Northern Line fleet of vehicles, coupled with secure infrastructure facilities providing system health and video data across multiple depots.

With an expected project value of £886,000 (A\$ 1.5 million), deliveries for the systems are expected to commence late in the first half of the 2016–17 financial year and completed before the end of the financial year. The systems will include the very latest on-board surveillance technology with the deployment of DTI's market-leading, feature-rich MDR-6 recording unit. Each train will also be equipped with DTI's high-resolution colour cameras.

The vehicles can be monitored via the DTI comprehensive back-end CCTV management system. This proven system is already in use within other parts of the London transport network allowing video evidence to be recovered from the vehicles through an on-line automated CCTV 'booking' system enabling transparent management of equipment, video retrieval and video storage. However, this latest project is the first for DTI on the London Underground.

Crucially, the DTI footprint will provide Alstom UK with a number of technology upgrade paths throughout the remaining life of the vehicles retaining leading-edge technology on one of the busiest services in the London Underground.

DTI's Managing Director, Richard Johnson, commented: *"This win further builds on DTI's reputation in Europe and around the world for providing advanced surveillance and information technology solutions and services in the mass transit market. It also demonstrates the increasing presence of DTI in the global rail sector. DTI has invested heavily in R&D and marketing as a long-term strategy to grow its rail business and the London Underground contract, with other recent wins in Philadelphia, Dallas, Dublin, Liverpool, Sydney, San Francisco, Marseilles and Utrecht is demonstrating that this strategy is succeeding."*

About DTI Group

DTI develops and provides world-leading surveillance and commuter communication systems technology and services to the mobile transit industry worldwide. Core technology development and system design activities are undertaken from the Company's head office.

About Alstom

Alstom Transport is one of the world's largest manufacturers of high-speed trains, tramways and metros, electrical and diesel trains, and operates in 60 countries and employs 28,000 people. The company also operates in the rail infrastructure market, designing, producing and installing infrastructure for rail networks.

About the Northern Line

The Northern Line is part of the London Underground rail network. It has 252 million passenger journeys per annum and rates as the second busiest line on the underground network.
