

Kansas seismic programme commences

ASX/MEDIA ANNOUNCEMENT

19 November 2014

Galilee Energy Limited (ASX: GLL) ("Galilee" or the "Company") is pleased to announce that the initial 3D seismic survey in Meade County, Kansas has commenced. The contracted seismic company has advised that it has now secured the required seismic permits and has commenced field activities.

Galilee has contracted with LoneStar Geophysical Surveys LLC to carry out the approximately 40 sq mile seismic shoot. Subject to normal field conditions, Lonestar expect to complete seismic acquisition by the end of the year with preliminary processing and results available early in 2015.

The key reservoir targets are shallow (4,000-6,000 ft) limestone and sandstones in the Carboniferous section, primarily in the Missourian Lansing and Kansas City groups. The reservoirs are generally from 5 to 40 feet thick and often have more than 20% porosity.

Secondary objectives exist in the slightly deeper Cherokee Group, Marmaton Group, Morrow Sandstone and Mississippi Lime.
