

## AQUABOTIX LAUNCHES THREE NEW PRODUCTS

---

- Aquabotix launches three new products in the SwarmDiver family of products:
  - the SwarmDiver STEALTH™ line for covert defence applications;
  - the SwarmDiver NIGHTLINE™ line to support special operations missions; and
  - the SwarmDiver EDGE™ line for security, deterrence and harbor management purposes.

Sydney, Australia and Fall River, Massachusetts, USA - UUV Aquabotix Ltd (ASX:UUV) ("Aquabotix" or the "Company") today announces that it has launched three new products – SwarmDiver STEALTH™, SwarmDiver EDGE™ and SwarmDiver NIGHTLINE™, in addition to the Company's existing base SwarmDiver™ product. The three new products are tailored for specific defence and commercial applications and expand the use cases for the SwarmDiver™ family of products. These three new products will be offered in addition to the Company's existing base SwarmDiver™ product.

**SwarmDiver STEALTH™** The SwarmDiver STEALTH™ line is intended for use in covert defence operations. This line of vehicles features a ruggedized exterior coating over a specialty graphic camouflage paint, a low-noise emitting motor, and no visible vehicle status lights to deliver a stealthy mission capability for SwarmDiver STEALTH™ to transit through littoral, harbor, and other challenging zones where avoidance of adversary detection is critical.

*SwarmDiver STEALTH vehicle designed for use in covert defence operations.*

Aquabotix created the STEALTH model to address military end-user and large defence company demand for a highly effective means of covertly collecting intelligence and transferring data in littoral environments where enemies are continuously monitoring activity through the use of acoustic sensors, electromagnetic spectrum monitoring, and visual detection. Beyond collecting intel, the STEALTH line can be used to securely transfer data between two points without the risk of interception posed by wireless transfer methods.

**SwarmDiver NIGHTLINE™** The SwarmDiver NIGHTLINE™ shares the same key features as the STEALTH line, including the ruggedized camouflage exterior and low-noise motors, and also has an added ultraviolet (UV) coating to make nighttime recovery of those vehicles easier. The UV coating is invisible to the naked eye, but can be detected at night or in low light environments when illuminated by the right wavelength UV light source. Aquabotix created this variant specifically with special forces use in mind.

**SwarmDiver EDGE™** The SwarmDiver EDGE™ line has applications in governmental, defence, and commercial domains. This line of vehicles is equipped with high intensity lights to create a visual boundary and act as a first line deterrent along a shore line, around a vessel or docking area, or near any other item of interest. Aquabotix created the EDGE line of vehicles to respond to threats of piracy, militant, or other disruptions to commercial and governmental activities.

*SwarmDiver EDGE™ as a first line deterrent around a vessel.*

Whitney Million, Aquabotix's Chief Executive Officer, commented "Our SwarmDiver product has literally dozens of applications and end-uses, solving problems that, to date, were difficult to manage, and in some cases, unsolvable, for commercial and governmental maritime and naval users. The three new products focus on only some of these issues. We plan to continue to evolve our family of products in order to enable our commercial and governmental partners to solve the challenges they face in real world situations around the globe."
