

ASX Release

Significant contract with leading environmental agency

28 September 2017

Envirosuite Limited (ASX: EVS) is pleased to advise that it has secured a subscription for its Envirosuite SaaS platform with a second California-based air quality management agency.

This initial contract with the Bay Area Air Quality Management District (BAAQMD) covers the deployment of Envirosuite to enhance the management of air quality data from the District's continuous monitoring network of over 30 air quality stations and to help investigate incidents and community complaints relating to air pollution across the region.

Established in 1955 as the first regional agency of its type in the United States, the BAAQMD is responsible for regulating and monitoring sources of air pollution in the nine counties that surround San Francisco Bay. The win for Envirosuite follows on from a contract signed by the company with the South Coast Air Quality Management District (the district for Los Angeles) earlier this year.

Peter White, CEO of Envirosuite said,

"In its implication this is the most significant licence agreement we have signed to date. The early adoption of Envirosuite by two of the world's leading environmental agencies illustrates that Envirosuite is the global benchmark in environmental management technology."

"This initial contract with BAAQMD is a further demonstration that Envirosuite offers distinct benefits to regulators in addition to key industry sectors. Regulators and industry are actively engaging with new technologies in the effort to meet legal and community expectations with respect to environmental quality."

"Envirosuite is very well placed to be an important player in these exciting times. This win is a significant statement in the global regulatory market that will resonate through this target vertical adding credibility in our dealing with the many opportunities we now have before us."
