

Fortune Asia Group Limited

ABN 19 161 234 395

Quarterly Report July to September 2017

Corporate

On 18 August 2017, Mr. Kwong Yeung TO was appointed as the non-director of the Company.

On 10 October 2017, Emperor Range Group Limited (the Company) held the General Meeting and advised that pursuant to the special resolution passed by 100% of shareholders, the name of the Company has been changed from Emperor Range Group Limited to Fortune Asia Group Limited.

The change of company name process has been completed by the Australian Securities & Investments Commission, effective 13 October 2017 and by ASX 23 October 2017. The new ASX listing code is 'FYA'.

The Board continues to review and evaluate potential corporate opportunities in the mining sector and is of the view that present market conditions will provide more opportunities going forward than seen in recent years.

Exploration Projects

As at the end of September 2017, no further exploration activities occurred in the two tenements held by the Company in Xinjiang Autonomous Region.

Until the Company is able to carry out its plan to develop its existing assets, the directors are committed to carrying out meaningful work by identifying and assessing opportunities that may be valuable to the Company. With a solid mineral asset base and sufficient cash from its initial public offering to carry out its work programs, the Company remains in a strong position to generate future wealth for shareholders.

Kyzyl-Leto Copper Project

Kyzyl-Leto has Chinese classified Non – JORC compliant mineralization of 4,271,500 tons at 1.93% copper for 82,300 tons of copper metal and an exploration license area of 13.05 square kilometers. Under the Chinese System of Resources Classification the resources have been classified as 332 and 333 which represent – Discovered but Indicated and Inferred respectively. The Company plans to bring this project into production as soon as possible.

The Kyzyl-Leto East and West prospects remain prospective for additional copper mineralization

targeting potential extensions to currently know mineralization. The priority is to target higher copper grades, increase tonnage and confidence in the mineralization at the Kyzyl-Leto East and West prospects. Post infill drilling JORC Compliant Resources could be estimated and economic studies applied to the appropriate level of classified resource.

Within the broader Kyzyl license there remains strong exploration potential to discover additional outcropping and possible concealed mineralization related to other QAP intrusive bodies. Initial exploration completed has identified several other QAP dykes with low to moderate grade copper mineralization at surface. Additional work programs are proposed that will evaluate known copper anomalies but also assist in discovering potentially concealed mineralization.

Wutonggou Gold Project

At Wutonggou, exploration to date has shown there is gold and copper mineralization extending over at least 250m along strike that warrants further investigation. The exploration license area for this project is 18.70 square kilometers.

Competent Person's Requirement – Exploration Results and Mineral Resources

Information in this announcement that relates to the Company's exploration results or estimates of mineral resources or ore reserves was originally provided in the Company's Replacement Prospectus dated 4 August 2014 and announced on the ASX on 19 September 2014 (Replacement Prospectus). The Company confirms that it is not aware of any new information or data that materially affects the information included in the Replacement Prospectus and in the case of estimates of mineral resources or ore reserves, that all material assumptions and technical parameters underpinning the estimates in the Replacement Prospectus continue to apply and have not materially changed.

Tenement Holdings and Movements

Mining Tenements and Beneficial Interest held as at the end of the December 2015 Quarter
