

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

As at January 2024

Fund objective

The Fund seeks to achieve a total return before fees that exceeds the total return of the Benchmark by 0.75% p.a. over rolling three year periods.

Sustainability objective

The Fund seeks to invest in credit securities which the Manager expects currently or will in the future contribute positively towards eight 'People' and/or 'Planet' themes.

Investment approach

The Manager utilises a proprietary 'Holistic' framework combining qualitative ESG assessments with third-party ESG measures and metrics to assess issuers; a process then complemented by active stewardship and engagement activities.

Fund Performance

The Janus Henderson Sustainable Credit Active ETF (Managed Fund) (Fund) returned 0.47% (net) and 0.51% (gross). The Fund outperformed the Bloomberg AusBond Composite 0-5Yr Index (Benchmark) by 0.12% (gross) in January, which returned 0.39% over the month.

The strong month-end rally following the inflation data read, together with higher coupon income lifted bond returns back into positive territory in January. Returns from duration itself were benign with the government curve not moving much during January (despite intra-month moves). There was some marginal twisting, where the shorter end fell, and the longer end steepened.

Credit spreads remained firmly unchanged over the month despite heavy supply in markets. Credit returns were solid, generating excess return from income advantage.

The Sustainable Credit Fund has a dual mandate; a sustainability objective and a performance objective. Each company within the portfolio has gone through our credit approval process, which includes negative screens, credit analysis and a sustainability assessment using our proprietary holistic ESG framework and active stewardship (where appropriate). In conjunction with normal portfolio construction practices, securities are chosen for their alignment with sustainable themes as well as their return potential for investors. These themes include 'Planet' (decarbonisation, circular economy, sustainable buildings, biodiversity) and 'People' (equality and alleviating poverty, inclusion and social diversity, aid disability support, affordable housing).

The Fund invests in a diversified and sustainable allocation of credit and agency securities, with at least 80% exposure to securities deemed 'Sustainable' and/or 'Impact' in our assessment. The Fund has over 75% allocated to investment grade credit, with the remainder across supranationals & agencies, semi governments and liquidity. Interest rate duration was the main negative return contributor for the month as bond yields moved higher, a modest active overweight positioning generated some underperformance versus benchmark.

It was a mixed month for local bond returns as the government curve on average saw yields rise only modestly despite a 30 basis point intra-month trading range. The main curve effect was steepening, where shorter maturity yields fell slightly on weaker domestic macro prints (employment, retail sales and CPI all missed to the downside), while longer maturity bond yields rose which offset income returns. The Fund actively navigated duration positioning with a bias to the two- to five-year maturity range was a positive contributor to excess return as the front end finished lower in yield.

Total returns as well as excess returns over the last quarter continued to be strong for investors with net returns above 4% over 3 months, and excess return since inception above the medium term Fund objective. Returns have benefitted from active duration positioning, income advantage across Supranational and credit allocations, as well as positive contributions from active security selection. Sustainable issuance had a strong start to the year from state governments and supranationals, we will look forward to corporate earnings season and potential issuance heading into March to further enhance yield in the portfolio.

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

(continued)

The RBA will be buoyed by the lower-than-expected headline CPI print, while the weakening in the household consumer sector will lower forward inflation expectations.

Market Review

The Reserve Bank of Australia (RBA) did not meet in January, and markets spent the month debating the merits of the starting point of the easing cycles.

Global moves drove much of the Australian momentum, with US Federal Reserve (Fed) easing expectations being delayed. Australian three-year government bond yields ended the month 4 basis points (bps) lower at 3.57%, while 10-year government bond yields were 6bps higher at 4.01%.

Markets are still looking to the start of the easing cycle, but there has been a little less optimism globally about when it starts and by how much. The catalyst has been in the US, with some higher-than-expected inflation outcomes, amid a lower trend.

Risk markets consolidated gains from prior months with the ASX 200 reaching a new all-time high to end January. This positive sentiment resonated amongst credit markets where credit spreads were able to tighten further amidst the highest ever January supply of US investment grade corporate debt totalling close to US\$200 billion. Australian primary markets also started with a bang with banks, state governments and supranational/agency issuers all printing large bond deals. This wave of supply was readily absorbed by investors less fearful of rising bond yields.

The Australian iTraxx Index ended unchanged at 68bps while the Australian fixed and floating credit indices returned +0.44% and +0.41% respectively, modestly outperforming cash and government bonds.

Market Outlook

The RBA will be buoyed by the lower-than-expected headline CPI print, while the weakening in the household consumer sector will lower forward inflation expectations. There are increasing signs of future labour market softness, while the December outcome itself was weak. We are forecasting a steady rise in the unemployment rate through 2024, which leads to more modest wages growth.

Our base case is for the RBA to remain on hold at current rates before commencing an easing cycle in September 2024. We price a more modest than average easing cycle, of around 175bps, spread over 12 months. We see the risks skewed to the downside, with a rising probability that the RBA may have to move earlier and slightly faster than our base case. In this scenario, the RBA starts moving in August 2024, with a total of 250bps of cuts, to below neutral interest rates. The Fed is anticipated to start easing in May, while the ECB starts easing in April.

In recognition of the softening growth environment, our credit strategy remains skewed towards high-quality, investment grade issuers with resilient business models, solid earnings power and conservative balance sheets. We have been actively and selectively taking advantage of the attractive yields on offer in highly rated corporate bonds and structured credit, particularly in the primary markets where transactions have come with new issue concessions.

We remain unimpressed by relatively tight spreads on offer in the bank hybrid market and remain in favour of allocations in investment grade corporates and higher up in the bank capital structure in Tier 2 and senior new issuance. We have replenished capacity to participate in new deals to start 2024 which offer better value versus secondary markets. We look to opportunities within securities producing higher yields as the broader market more rationally reprices risk, with conservatively geared Australian real estate investment trust (REIT) senior debt showing attractive relative value. We expect soon after the upcoming Australian reporting season the next rounds of corporate bond issuance will eventuate after taking a summer break.

SUSTAINABLE CREDIT ACTIVE ETF (MANAGED FUND)

(continued)

It was an extremely busy month of issuance in Sustainable and Green bonds.

We are electing to be under allocated to sub investment grade and illiquid credit, with a strong preference to earn reasonable income and capital gains up in quality for now. Our expectation remains for lower quality credit spreads to remain bumpy as investors digest weakening corporate fundamentals as the higher cost of capital and slowing growth environment takes time to wash through earnings. We are withholding risk and liquidity capacity in anticipation of more attractive entry points for global high yield and loans. In recent months we have bolstered our levels of credit protection (via credit default swaps) as we approach the point in the cycle where effects of policy tightening are becoming more apparent.

ESG Commentary

It was an extremely busy month of issuance in Sustainable and Green bonds. State governments and supranationals issued in sizable volume, with QTC and IBRD issuing deals at \$2 billion and above. Other notable transactions included NSW Treasury Corp and KfW at \$1.7 billion and \$1.5 billion respectively.

For insights on the Australian fixed income team's company engagement, please view our recently published ESG quarterly [here](#).

As at December Quarter 2023

Labelled bonds# structure breakdown	Fund
Sustainability-linked	8%
Sustainability	11%
Social	10%
Green	40%

Labelled bonds include use of proceeds bonds such as green, social and sustainability bonds which fund projects with specific and dedicated environmental and/or social benefits and sustainability-linked bonds that do not finance particular projects but rather have their coupons linked to the issuers reaching predetermined sustainability performance targets and key performance indicators. Percentages may not add up to 100% as the breakdown only considers labelled bond investments in the fund.
